RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	Extracted from Golden Gate Environmental's March 31, 2010 Report of Groundwater Monitoring & Additional Site Characterization, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. In 1989, the Site was leased by the Coyne Cylinder Company and was occupied by a paint cylinder plant. In August 1989, an 8,000-gallon acetone underground storage tank (UST), associated with the paint cylinder plant, was removed from the southwestern portion of the site. Soil samples collected from the UST excavation by Applied Consultants contained concentrations of acetone up to 9,000 milligrams per kilogram (mg/kg), which indicated that an unauthorized release had occurred. Subsequently, on 26 September 1989 the San Mateo County Health Services Agency (SMCHSA) issued a letter requiring that all soil with acetone concentrations in excess of 100 mg/kg be remediated. In October 1989, three monitoring wells (MW-1, MW-2, and MW-3) were installed downgradient (south) of the former UST location to assess groundwater quality. Groundwater samples from these wells had elevated acetone concentrations. Three additional monitoring wells (MW-4, MW-5 and MW-6) were then installed to assess the horizontal extent of the acetone plume. On 27 February 1990, an additional excavation was completed in the area of the former UST to remove all soils containing acetone concentrations greater than 100 mg/kg. Remedial confirmation samples were collected around the excavation in the presence of a SMCHSA employee. The confirmation samples did not have acetone concentrations greater than 100 mg/kg. Excavated soils were stockpiled onsite and aerated in an effort to remove volatile constituents within the soil. After five months, soil samples were collected from the stockpile to determine if detectable concentrations of acetone, total petroleum hydrocarbons (TPH),

COYNE CYLINDER COMPANY (Continued) **1000311486**

benzene, toluene, ethylbenzene or xylenes were present. No detectable concentrations were found in the stockpile and the soil was used to backfill the excavation along with imported clean fill. In April 1991, monitoring well MW-1 was converted to recovery well RW-1 and a quarterly groundwater monitoring program was implemented. During the conversion of recovery well RW-1, a pump was installed within the well box and as a result RW-1 could only be sampled through the pump. Groundwater analysis initially included VOCs and TPH as gasoline (TPHg). Several years of monitoring showed that TPHg was not present. Low detections of TPHg were quantified due to peaks caused by acetone and methyl isobutyl ketone (MIBK), and TPHg analysis was discontinued in 1996. Groundwater was pumped, treated and discharged from RW-1 between 21 April 1991 and 11 November 1996. Treated groundwater was discharged to the sanitary sewer system. By 11 November 1996, Applied Consultants estimated that 114.53 gallons of dissolved phase acetone and 0.376 gallons of dissolved MIBK were removed by pumping. Two downgradient monitoring wells (MW-7 and MW-8) were installed at the Site in October 1996 and analyzed for VOCs along with the existing wells. Source area and downgradient monitoring wells (RW-1 and MW-5 through MW-8) continue to be monitored at the Site. On 22 February 2008, Treadwell & Rollo supervised the drilling of three soil borings (SB-6, SB-7, and SB-8) inside the existing warehouse building, using a limited access direct push drill rig. During drilling, soil samples were continuously collected for lithologic description purposes using a 3-foot long macro-core sampler lined with polyvinyl chloride (PVC) liners. An organic vapor meter (photoionization detector [PID]) was used to field-screen the soil samples for VOCs. Organic vapor readings are presented on the boring logs in Attachment A. No soil samples were retained for chemical analyses. The materials encountered in the boring were logged according to the Unified Soil Classification System by a Treadwell & Rollo field geologist under the review of a California-registered geologist. All drilling activities were performed by Precision Sampling, Inc. of Richmond, California. Drilling was performed under a SMCHSA permit (Permit No. 08-0191). Grab groundwater samples were collected from each boring by a Treadwell & Rollo representative. The soil borings were advanced to approximately five to ten feet below the observed groundwater depth in each boring. Five feet of slotted PVC was placed into the borehole once the desired depth was achieved and the groundwater in the borehole was allowed to stabilize prior to sampling. Groundwater sampling was conducted using a small diameter disposable bailer and was immediately transferred into laboratorysupplied sample containers. Following the collection of the groundwater, the sample bottles were labeled, sealed, and placed in an ice-cooled chest for delivery to McCampbell Analytical, a Californiacertified analytical laboratory, using chain-of-custody procedures. The samples were analyzed for VOCs by EPA Method 8260. Soil borings that were not converted into a monitoring well (SB-6 and SB-8) were sealed to the surface with neat cement grout, using the tremie method.

CA Enviroscreen 4 Score:	80-85%
Military DOD Site:	No
Facility Project Subtype:	Not reported
RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	The same case as the San Mateo County UST case # 550056 closed by the County on 7/20/2011 related to the release from a 8,000-gal acetone UST. The 1996 Risk Based Corrective Action Study states no exposure pathways for remaining acetone; nine groundwater monitoring wells were decommissioned in 1989.

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	Extracted from Cambria's March 20, 2007 Site Assessment Rpeort, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The subject site is the Melody Toyota auto sales facility located at 750 El Camino Real in San Bruno, California. The site is near the intersection of San Bruno Avenue and El Camino Real in a mixed commercial and residential area (Figure 1). A site plan is presented in Figure 2. The site is bound by El Camino Real to the west, a Shell service station to the north, Hensley Avenue to the east, and car lots and Midas Muffler to the south. On the west side of El Camino Real and upgradient of the site is Mill's Park Cleaners, a tetrachloroethene (PCE) dry cleaning facility. Two car lots, defined as the Gootnick Property and located at 732 and 740 El Camino Real, are adjacent to the Melody Toyota and are a current environmental case with SMCHD. The Midas Muffler at 700 El Camino Real is a closed environmental case with SMCHD. From 1955 to 1960 the site was occupied by a full service automobile dealership. Since 1960, the site has been occupied by the Melody Toyota automobile dealership. In 1957, one 550 gallon gasoline underground storage tank (UST) and two 300 gallon used-oil USTs were installed. In April 1996, the three USTs were removed from the site. 1996 UST and Hoist Removal: On April 19, 1996, Cottle Engineering (Cottle) of Antioch, California excavated and removed three USTs, and six underground hydraulic hoists from the site. The tanks consisted of one 550 gallon gasoline UST located in the sidewalk west of the dealership's service facility, and two 300 gallon used-oil USTs located in the driveway inside the service facility portion of the building (Figure 2). The tanks had visible signs of corrosion and perforations on the tank walls. Low hydrocarbon concentrations were detected beneath the gasoline UST and the eastern used-oil USTs. Elevated hydrocarbon concentrations were detected beneath the western used-oil UST and hydraulic hoist #l. During the last week of April 1996, overexcavation of both UST pits and hydraulic hoist #1 began. On May 6, 1996, confirmation samples were collected at the base of the excavations for the former USTs and hydraulic hoist #l. No hydrocarbons were detected in the overexcavation confirmation soil sample from the gasoline UST pit; therefore, it was backfilled with clean fill. Hydrocarbons were detected in the two used-oil UST and hydraulic hoist #1 overexcavation confirmation soil samples; therefore, both excavations were overexcavated a second time. No hydrocarbons were detected in the third confirmation soil sample from

MELODY TOYOTA (Continued) **U001594638**

the hoist #1 pit; therefore, the excavation was backfilled with clean fill. On May 23, 1996, the second overexcavation of the former used-oil UST pit could not be continued to the north, because of two large foundation grade beams. On May 28, 1996, a soil confirmation sample was collected from the western side wall, along with a groundwater sample. No hydrocarbons or VOCs were detected in the western sidewall sample (MT-300). Groundwater was present in the excavation. The grab groundwater sample (MT-250) from the excavation had concentrations of 3,800 micrograms per liter (p a) total petroleum hydrocarbons as diesel (TPHd), 4,100 pgL TPH as motor oil (TPHmo), 700 pg/L TPH as gasoline (TPHg), 12 pg/L benzene, and 150 pg/L tetrachloroethene (PCE). On June 6, 1996, sidewall soil confirmation samples were collected from the north and east walls of the excavation. The northern sidewall soil confirmation sample (MT-2000) was found to contain 3,300 milligrams per kilogram (mglkg) TPHd, 19,000 mg/kg oil & grease (O&G), 650 mg/kg TPHg, 0.52 mg/kg benzene, and leaking underground fuel tanks (LUFT) metals. The eastern sidewall soil confinnation sample (MT-3000) was found to contain 1.1 mglkg TPHd, 0.270 mglkg PCE, 0.330 mglkg 1,2-dichlorobenzene (1,2-DCB), 0.021 mgtkg 1,4-DCB, and concentrations of LUFT metals. This sample may have been impacted by regional groundwater condition, specifically PCE. This excavation was backfilled with clean fill on July 1, 1996. During the April through June 1996 excavation activities, a total of approximately 212 tons of non-hazardous soil were transported offsite and properly disposed. 1996 Well Installation: After backfilling the used-oil UST excavation in July 1996, Cottle installed a four-inch diameter, 20 ft deep observation well, OW-1 (renamed well MW-3) in the center of the excavation. On July 22, 1996, soil borings MT-1 through MT-5 were advanced and borings MT-1 through MT-4 were converted into two-inch diameter monitoring wells (see Table 1 for current monitoring well names). Soil samples collected in MT-1 through MT-5 were analyzed for TPHd; TPHg; O&G; benzene, toluene, ethylbenzene, and xylenes (BTEX); volatile organic compounds (VOCs); and LUFT metals. In addition to metals, only TPHd was detected at 1.3 mglkg, in boring MT-3 at 14 ft bgs. May 2003 Subsurface Investigation: On May 12, 2003, Hydro Analysis, Inc. (HA) advanced soil borings HB-I through HB-5 to 15 ft bgs. The borings were hand augered by Gregg Drilling of Martinez, California. Soil samples were collected from 5, 8, and 11 ft bgs were submitted for analysis. Soil samples were analyzed for TPHd, TPHmo, TPHg, O&G, BTEX, methyl tert-butyl ether (MTBE), VOCs, semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and LUFT metals. Soil concentrations of TPHmo, O&G, TPHg, BTEX, SVOCs, and LUFT metals were detected. No TPE-Id, MTBE, or VOCs were detected. Detected SVOCs included naphthalene and 2-methyl-naphthalene. These are common to petroleum products. Grab groundwater samples were collected at each soil boring location. Elevated concentrations of TPHg and PCE were detected in all groundwater samples analyzed. 2005 Revised Subsurface Investigation Report: HA's March 30, 2005 Revised Subsurface Investigation report was apparently submitted in response to SMCHD letter dated November 6, 2003. HA identified TPHmo, total chromium, lead and 2-methyl-napthalene as contaminants of concern (COC) for soil. Groundwater COCs were identified as TPHg, TPHmo, xylenes, PCE, and 2-methyl-napthalene. HA recommended an additional subsurface investigation to define the dissolved petroleum hydrocarbon groundwater plume, investigate a possible off-site PCE source, and complete a site-specific risk assessment. 2005 Subsurface

MELODY TOYOTA (Continued) **U001594638**

Investigation and Risk Assessment Report: Cambria's Subsurface Investigation and Risk Assessment Report, dated November 4, 2005, documented additional investigations and a review of available files from CSMHD and the City of San Bruno on Melody Toyota and neighboring sites. Conclusions presented in this report form the basis for the scope of the January 2007 investigation. Groundwater Monitoring: Periodic groundwater monitoring has been performed since 1997, with quarterly monitoring events since 2005.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	Extracted from Golden Gate Environmental's January 29, 2010 Potential Responsible Party Search report, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The Site is located in a commercial district near the intersection of San Bruno Avenue West and El Camino Real. The Site was occupied by the existing commercial store building in a strip mall shopping center prior to 1949 according to historical Sanborn fire insurance maps. We understand that G.W. Williams has owned the subject property since circa 1950. Apparently, the Williams family developed Camino Plaza along with the Mills Park housing tract in the late 1940s to early 1950s. Historical telephone directories indicate that the Mills Park Cleaners has occupied the store since circa 1981. In 1976, the Mills Park Cleaners & Laundry is listed as the occupant of the building. The current tenants, Mr. Juwon & Mrs. Sam Hahn leased the Mills Park

MILLS PARK CLEANERS (Continued) **1002847959**

Cleaners facility beginning in February 1987. The previous tenant of Suite 709 was In Sik & Chong Suk Park who operated the facility from circa 1980 through 1987. Prior to 1980, the former operator is believed to be Michael Barrese. Reportedly, Suite 709 has been continuously used for a dry cleaner facility since circa 1948. According to Sam Hahn, when they initially moved into Suite 709, the existing dry cleaning machine was less than five years old. However, the Permac machine was an older transfer type machine with three separated units prone to releases of Perchloroethylene (Perc or PCE) to the surrounding floor. Two photographs in Appendix A show the main clothes cleaning machine, sniffer unit, and distilling system of the in-place old machine. Significant staining of the underlying concrete floor is evident in these photos confirming Juwon & Sam Hahn s account that Perc spills to the concrete floor had occurred prior to their occupancy. Being knowledgeable of the potential hazards of Perc, Juwon & Sam Hahn purchased and installed a new closed-system Dry-to Dry machine (with a secondary containment pan) on September 12, 1987. A photograph of the new machine being delivered to the Mills Park Cleaners facility is shown in Appendix A (Photograph No. 6). Since their occupancy in 1987, Juwon & Sam Hahn have been permitted and inspected by the San Mateo County Health System with no reported releases or other violations. They have records indicating their conscientious disposal of waste Perc from the dry cleaning machine by Technichem and Safety Kleen. In 2007- 2008, Sam Hahn voluntarily replaced the PERC machine with a hydrocarbon based dry cleaning machine. Additional photographs in Appendix A show the new machine installed in the facility. Two Leaking Underground Storage Tank (LUST) cases are located on El Camino Real near the Mills Park Cleaners facility (Photograph No. 2, Appendix A). The Gootnick Property at 732 El Camino Real and Melody Toyota and 750 El Camino Real have ongoing groundwater investigations. Groundwater measurements at these LUST cases indicate that groundwater is flowing underground from the subject property towards El Camino Real. The discovery of PCE contamination in groundwater at these two sites indicates that PCE contamination may be originating from the vicinity of the Mills Park Cleaners facility. In their November 4, 2005 document titled Subsurface Investigation and Risk Assessment Report, Cambria recommends investigating the Mills Park Cleaners as a potential upgradient source of PCE by completing additional subsurface investigation activities upgradient of the site. The San Mateo County Groundwater Protection Program (GPP) requested groundwater sampling down-gradient from the dry cleaner facility. Sam Hahn subsequently submitted the analytical results of the April 9, 2009 grab groundwater sample requested by the GPP. The sample revealed a concentration of PCE in groundwater of 280-8g/l that is above the Environmental Screening Level (ESL). Because Mills Park Cleaners is the current business owner-operator at the property where the groundwater contamination was discovered, GPP staff named Mills Park Cleaners as a responsible party for corrective action. Other potential Responsible Parties identified in this search consist of the former operator of Mills Park Cleaners named Insik Park (from circa 1980 to 1987); and the historical operator prior to circa 1980 named Michael Barrese. Based on the documentation provided by Mrs. Sam Hahn, it appears reasonable to expect that PCE releases to soil (if any) and groundwater at the site will be associated with pre-1987 chemical storage, handling and disposal practices. As presented in the San Mateo County Health System Letter, dated August 6, 2009, GPP

MILLS PARK CLEANERS (Continued) **1002847959**

staff also named G.W. Williams & Co. as a responsible party for corrective action. Based on their history of conscientious chemical housekeeping since 1987, lack of violations, and installation of a closed-system dry cleaning machine with secondary containment in 1987, Ms. Sam Hahn requests that the current operator of Mills Park Cleaners not be listed as the primary responsible party for the corrective action at the site, and that it would be more appropriate for the owner and past operators of the dry cleaning facility to be listed as the primary responsible party, since the history of transfer-type dry cleaning machines with Perc spillage to the floor prior to 1987 would be the likely cause of any soil and groundwater contamination at the site.

Site History:

Extracted from LFR Arcadis' January 11, 2010 Limited Site Assessment Summary Report, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The Site, identified in correspondence with the SMCHSA as 732 El Camino Real, is an 18,200 square foot asphalt paved parking lot which encompasses parcels with street addresses of 732 and 740 El Camino Real. The Site is located on the northeast side of El Camino Real, approximately 500 feet southeast of San Bruno Avenue. Prior to the SLR investigation, four groundwater monitoring wells (MW-1 through MW-4) existed at the Site. The Site is leased to the Melody Toyota auto dealership (Melody) which is located immediately north of the Site and is used for automobile parking. In August and September of 1996, Melody demolished an automobile showroom located on the Site to increase the amount of space available for automobile parking. In July 1996, HK2, Inc./SEMCO Environmental Contractors (SEMCO) removed one 500-gallon UST from the Site on behalf of the Property Owners. Several holes were reportedly observed at the bottom of the UST during removal. A soil sample collected at the center of the base of the UST cavity at a depth of approximately 9.8 feet below ground surface (bgs), yielded total petroleum hydrocarbons as gasoline (TPHg) at 21 milligrams per kilogram (mg/kg), total petroleum hydrocarbons as diesel (TPHd) at 870 mg/kg, and benzene at 0.036 mg/kg. Groundwater was reportedly not encountered in the UST cavity. Following receipt of the analytical data, the SMCHSA in a letter dated August 12, 1996, required the submittal of a Work Plan to evaluate the extent of impacts to soil, and potentially to groundwater. In September 1996, SEMCO submitted the requested Work Plan, proposing over excavation of impacted soil followed by confirmation soil sampling. The SMCHSA then notified the Property Owners that over excavation might not be necessary if the Site met existing criteria for low-risk case closure. In October 1996, SEMCO submitted a revised Work Plan, and on October 22, 1996, drilled one direct-push soil boring (B-1) to a depth of approximately 16 feet bgs immediately east of the former UST cavity. Groundwater was reportedly encountered in the boring at a depth of approximately 11 feet bgs, and a grab groundwater sample was collected for chemical analysis. Results of the water sample analysis revealed TPHg, TPHd, benzene, and methyl tertiary butyl ether (MTBE) at 480 micrograms per liter (8g/l), 270,000 8g/l, 30 8g/l, and 11 8g/l, respectively.
Between November and December 1996, SEMCO over excavated approximately 387 cubic yards of hydrocarbon-impacted soil in the vicinity of the former UST cavity. During over excavation activities, a 420-gallon capacity UST was discovered approximately 8.5 feet east of the former 500-gallon UST. After acquiring the necessary permits, SEMCO removed the 420-gallon UST under the supervision of the SMCHSA. Confirmation (sidewall) samples did not yield TPHg, TPHd, benzene, toluene, ethylbenzene, and total xylenes (BTEX compounds), or total lead at or above the corresponding laboratory method detection limits (LMDLs). Analysis of a grab groundwater sample collected from within the excavation yielded TPHg, TPHd, BTEX compounds, and MTBE at 5,900 8g/l, 14,000 8g/l, 1,500 8g/l, and 310 8g/l, respectively. Following completion of over excavation activities, SEMCO installed one 4-inch diameter groundwater monitoring well (MW-1) within the backfill material, along the northwest sidewall. The excavation was backfilled with crushed rock and pea gravel from 4 to 18 feet bgs, and with class II base material from the ground surface to 4 feet bgs. SEMCO gauged and sampled well MW-1 six times between June 1998 and

GOOTNICK PROPERTY (Continued) **S102430892**

September 1999, and once thereafter on December 21, 2000. Results of the June 1998 sampling event revealed the presence of volatileorganic compounds (VOCs). However, because VOCs were not being analyzed, the laboratory did not quantify these constituents in their report. In September 1998, groundwater samples collected and analyzed from well MW-1 yielded VOCs at the maximum constituent concentrations, 1,2-dichloroethane (EDC) at 23 8g/l, trichloroethylene (TCE) at 72 8g/l, tetrachloroethylene (PCE) at 390 8g/l, isopropylbenzene at 3 8g/l, n-Propylbenzene at 8 8g/l, and 1,2,4-Trimethylbenzene at 27 8g/l. In a letter dated October 30, 1998, the SMCHSA requested a Work Plan to further evaluate the extent of hydrocarbon-impacted soil and groundwater at the Site, and to continue quarterly groundwater sampling. It is unknown if Work Plan was submitted, approved, or implemented. However, quarterly groundwater sampling was performed from December 1998 through September 1999. On February 15, 2000, the SMCHSA requested a Work Plan for additional Site assessment and collection and chemical analysis of groundwater samples from well MW-1. North State Environmental reviewed the SMCHSA s files for the Site, and nearby release cases, and submitted a Work Plan, on behalf of the Property Owners, to the SMCHSA in March 2000. Additional information regarding the submittal or implementation of the Work Plan is unknown. Quarterly groundwater sampling began on December 21, 2000. On January 4, 2001, the SMCHSA issued a letter requesting a Work Plan to characterize the full extent of impacts to the Site subsurface. The Work Plan was subsequently submitted to the SMCHSA on February 20, 2001, and following SMCHSA approval on April 12, 2001, implemented the Work Plan between July 17 and August 23, 2001. The proposed scope of work included a door-to-door well survey performed within 500 feet up-gradient and cross-gradient, and 1,000 feet downgradient, advanced six soil borings (B2 through B8), converted borings B6 through B8 into groundwater monitoring wells (MW-2 through MW-4), and submitted a Summary Report to the SMCHSA on December 31, 2001. On May 1, 2002, the SMCHSA issued a letter requesting a Work Plan to complete Site characterization, initiate quarterly groundwater monitoring, re-survey the wells for GeoTracker requirements, and upload data collected after January 2002 to the GeoTracker database. On August 16, 2002, an extension for submitting the Work Plan was requested and SMCHSA agreed to extend the submittal date to September 16, 2002. On October 23, 2002, the wells were surveyed as requested by SMCHSA per the GeoTracker requirements. On October 28, 2002, the SMCHSA issued a Notice of Violation (NOV) to the Property Owners for failing to meet the Work Plan submittal date, and required that the Work Plan to be submitted by September 15, 2002. On November 5, 2002, the Fourth Quarter 2002 sampling event was performed and the report summarizing the results was submitted to the SMCHSA on December 23, 2002. The Property Owners then requested that the SMCHSA review and comment on the groundwater monitoring report prior to finalizing and submitting the Work Plan. On February 28, 2003, SLR submitted the requested Work Plan, which the SMCHSA approved on March 14, 2003. The Work Plan proposed advancing six soil borings along Hensley Avenue and installing three monitoring wells on-Site.

UNION PACIFIC - SITE ADJACENT TO 69 S. LINDEN AVENUE (Continued) **S111464702**

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Report
Completed Date:	08/17/2016
Comments:	The Vapor Intrusion Evaluation Report documents a vapor intrusion investigation at the site. DTSC has reviewed and approved the report.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Monitoring Report
Completed Date:	12/22/2015
Comments:	This report provides the results from the March 2015 quarterly groundwater monitoring.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Monitoring Report
Completed Date:	08/18/2015
Comments:	This document reports the quarterly groundwater monitoring results for June 2015.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Monitoring Plan
Completed Date:	10/17/2014
Comments:	The Groundwater Monitoring Plan describes the data quality objectives, sampling procedures, analytical methods, and frequency of groundwater monitoring activities for the Site. The October 17, 2014 Addendum to the Groundwater Monitoring Plan adds that during the first monitoring event, groundwater will also be analyzed for CAM-17 metals.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Workplan
Completed Date:	09/11/2014
Comments:	The Revised Addendum to the Revised Final Sampling and Analysis Work Plan describes the proposed scope of work and procedures for conducting an additional investigation at the site. The investigation will include collecting groundwater samples and subslab vapor samples. Not reported

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Report
Completed Date:	08/25/2016
Comments:	In 2014 additional site investigation was performed in accordance with the Revised Addendum to the Revised Final Sampling and Analysis Work Plan. The Updated Site Investigation and Conceptual Site Model (Report) incorporates the results from the 2014 investigation to provide an updated conceptual site model.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Annual Oversight Cost Estimate
Completed Date:	08/30/2012
Comments:	Oversight Cost Estimate included as an Exhibit in the VCA.

Completed Date: 01/06/2022
Comments: Recent replacement of extraction well fans to stronger fans indicates improved indoor air quality. Laboratory results of indoor air samples collected August 22, 2021 were at least one order of magnitude less than DTSC indoor air screening levels, including the tetrachloroethene (PCE) screening level of 2.0 μg/m3 and the vinyl chloride screening level of 0.16 μg/m3. Indoor air analytical results were significantly lower than historical indoor sample results, including samples collected at the same locations. Carbon (filter) replacement was not necessary this quarter. The sub-slab vapor probe monitoring network is functional with only minor maintenance conducted during the monitoring period (i.e. labeling and replacement of probe tip covers).

Completed Document Type: Site Characterization Workplan
Completed Date: 04/02/2018
Comments: DTSC has approved the Work Plan for Additional Indoor Air Sampling at the Morena Trust Site. Indoor air sampling is being done in two units to reevaluate indoor air conditions following modifications to the building foundation. Sampling will take place in two seasons.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot Study/Treatability Workplan
Completed Date: 03/07/2019
Comments: DTSC has reviewed and approved the Work Plan to implement a Pilot Test of a Sub-Slab Depressurization System (SSDS) at the Starlite/Canal Building at 111 Starlite Street in South, SF. The Subslab Depressurization System mitigates the intrusion of subsurface tetrachloroethylene (PCE or perc) vapors by passively depressurizing the subsurface relative to the occupied building and creating a preferential pathway for those vapors to escape. Field implementation is scheduled to begin in second quarter 2019 and the pilot test period will continue for an additional 6-12 months after. If the pilot test demonstrates that an SSDS is successful in mitigating the subsurface intrusion of PCE vapors, the remedy will be recommended and proposed in a Removal Action Workplan which the neighboring community will have the opportunity to comment on.

Comments: The sub-slab depressurization system report documents the operation of the system. The system fans were replaced with stronger fans (PT-25) to increase the vacuum and effectiveness of the system. The system removes PCE and other halogenated VOCs and maintains an effective negative pressure in the sub-slab area within the area of vacuum influence. The flow rates and effective radius of influence of the system increased since installation of the PT-25 fans. Indoor air monitoring will occur for a second season to ensure that the system improvements are effective at reducing PCE vapor intrusion into the building.

Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 01/06/2022
Comments: Recent replacement of extraction well fans to stronger fans indicates improved indoor air quality. Laboratory results of indoor air samples collected August 22, 2021 were at least one order of magnitude less than DTSC indoor air screening levels, including the tetrachloroethene (PCE) screening level of 2.0 μg/m3 and the vinyl chloride screening level of 0.16 μg/m3. Indoor air analytical results were significantly lower than historical indoor sample results, including samples collected at the same locations. Carbon (filter) replacement was not necessary this quarter. The sub-slab vapor probe monitoring network is functional with only minor maintenance conducted during the monitoring period (i.e. labeling and replacement of probe tip covers).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 02/25/2015
Comments: Document was not prepared by DTSC. Letter from San Mateo County Groundwater Protection Program (GPP) in response to the Sub-Slab Vapor Remediation Progress Report submitted December 22, 2014. GPP expressed concerns that soil and vapor impacts may still be present and contributing to subsurface vapor issues on site. GPP requested a workplan to investigate potential indoor air.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 04/02/2018
Comments: DTSC has approved the Work Plan for Additional Indoor Air Sampling at the Morena Trust Site. Indoor air sampling is being done in two units to reevaluate indoor air conditions following modifications to the building foundation. Sampling will take place in two seasons.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot Study/Treatability Workplan
Completed Date: 03/07/2019
Comments: DTSC has reviewed and approved the Work Plan to implement a Pilot Test of a Sub-Slab Depressurization System (SSDS) at the Starlite/Canal Building at 111 Starlite Street in South, SF. The Subslab Depressurization System mitigates the intrusion of subsurface tetrachloroethylene (PCE or perc) vapors by passively depressurizing the subsurface relative to the occupied building and creating a preferential pathway for those vapors to escape. Field implementation is scheduled to begin in second quarter 2019 and the pilot test period will continue for an additional 6-12 months after. If the pilot test demonstrates that an SSDS is successful in mitigating the subsurface intrusion of PCE vapors, the remedy will be recommended and proposed in a Removal Action Workplan which the neighboring community will have the opportunity to comment on.

Comments: Letter was not prepared by DTSC. Letter from San Mateo County Groundwater Protection Program (GPP) noting that standard indoor air sampling protocols were not followed for the 11/16/2015 indoor air report and requesting a cool season sampling event.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 05/25/2016
Comments: Document was not prepared with DTSC oversight. In response to a May 22, 2015 letter from San Mateo County Groundwater Protection Program (GPP), Trinity Source Group (Trinity) conducted a cool-weather assessment of indoor air. Sub-slab vapor probes were also sampled. Maximum reported concentrations were 2.1ug/m3 for tetrachloroethene (PCE) and 0.086 ug/m3 for trichloroethene (TCE) for the indoor air sampling. PCE was detected from in 14 of the 16 subslab probes samples from 48.8 to 25,600 ug.m3. TCE was detected in 8 of the 16 subslab probes at concentrations ranging from 94.0 to 1540ug/m3.

Completed Document Type: Technical Report
Completed Date: 03/08/2022
Comments: The sub-slab depressurization system report documents the operation of the system. The system fans were replaced with stronger fans (PT-25) to increase the vacuum and effectiveness of the system. The system removes PCE and other halogenated VOCs and maintains an effective negative pressure in the sub-slab area within the area of vacuum influence. The flow rates and effective radius of influence of the system increased since installation of the PT-25 fans. Indoor air monitoring will occur for a second season to ensure that the system improvements are effective at reducing PCE vapor intrusion into the building.

completed. Lead contaminated soil was excavated and disposed of offsite, however soil lead that exceeds unrestricted use levels remains at the Site at depths of 1 foot beneath the surface, and below. A land use covenant was recorded on January 31, 2014 in order to prohibit the use of the site as a residence, hospital, school, or day care. The land use covenant also prohibits soil disturbance at or below 1 foot below grond surface without a DTSC approved Soil Management Plan.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Standard Voluntary Agreement
Completed Date: 12/10/2009
Comments: RP signed VCA received and processed. UPRR will be submitting the advance payment within 10 days.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 02/03/2014
Comments: DTSC has determined that all appropriate response actions have been completed. Lead contaminated soil was excavated and disposed of offsite, however soil lead that exceeds unrestricted use levels remains at the Site at depths of 1 foot beneath the surface, and below. A land use covenant was recorded on January 31, 2014 in order to prohibit the use of the site as a residence, hospital, school, or day care. The land use covenant also prohibits soil disturbance at or below 1 foot below grond surface without a DTSC approved Soil Management Plan.

CA BOND EXP. PLAN:

Reponsible Party:	COST RECOVERY/OPERATION AND MAINTENANCE SITE
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	Sun Chemical and U.A. Local 38 Pension Trust Funds are the responsible parties. The RPs funded the characterization and remedial action at this site. State Bond funds were used for oversight of the RP's activities. DHS will seek cost recovery for its direct costs including staff costs and overhead related to the project.
Site Description:	This site is a former print ink manufacturing facility. Soil contamination has been identified onsite. Tanks and sumps containing oily and ink wastes are also onsite.
Hazardous Waste Desc:	Heavy metals including lead, zinc and barium, as well as cyanide comple1xes are present in sumps and soils. The hazards associated with these wastes and contaminants have been eliminated by removal of the liquids and sludges; removal of tanks, sumpsand piping; cleanup of residues on floors and other surfaces of the building; and excavation and redisposal of contaminated soils from the site.
Threat To Public Health & Env:	Peak concentrations of contaminants in the ground water are below applicable drinking water requirements. Ground water monitoring sampling continued until September, 1987. The monitoring wells were destroyed in December, 1987,

SUN CHEMICAL CORPORATION (Continued) **S100833558**

following limited pumping of one well to remove the remaining ink.

Site Activity Status: The responsible parties conducted removal of the liquids and sludges and sumps and piping in the early part of 1986. The site was fully characterized in mid 1987. DHS certified that the site was remediated in November, 1987.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 09/30/2010
Comments: The Site has been subdivided into 12 separate parcels and houses 12 industrial/warehouse condominiums and a concrete surface parking lot. It was observed that the surface of the concrete was in very good condition with only minor of cracking. There was no evidence of any activities prohibited by the Deed Restriction.

Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 05/16/2011
Comments: The surface of the concrete was in very good condition with only minor of cracking. There was no evidence of any activities prohibited by the Deed Restriction.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 05/07/2009
Comments: During the inspection of the parking lot some cracking of the concrete surface was observed. There was no evidence of any activities prohibited by the Deed Restriction. It is recommended that the cracks observed during the inspection will only become worse and should be repaired.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 02/23/2012
Comments: DTSC conducted its annual site visit to check the condition of the pavement over contaminated soil and to verify compliance with the restrictions and requirements of the Land Use Covenant. The surface of the pavement was in very good condition with only minor of cracking. There was no evidence of any activities prohibited by the Land Use Covenant.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Land Use Restriction - Site Inspection/Visit
Completed Date:	03/10/2016
Comments:	DTSC staff performed annual inspection on February 11, 2016. Lead remains in soil at the site at concentrations that do not allow for unrestricted use. The lead-impacted soil is contained under the concrete pavement and buildings on the site. An area of the concrete pavement was observed during the inspection that requires repair. Also, vegetation and sediment were observed in a storm drain should be removed. Based on the inspection, DTSC concluded the selected remedial action remains protective of human health and the environment.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Land Use Restriction - Site Inspection/Visit
Completed Date:	01/31/2017
Comments:	DTSC's personnel performed an annual cap inspection on January 17, 2017. During the inspection, areas of cracking and deterioration were observed on the surface of the concrete. However, no soil underneath was exposed and no evidence of any activities prohibited by the Land Use Covenant was observed.

Completed Date:	06/25/1986
Comments:	Completed RA. The RA consisted of excavation and disposal of contaminated soil, hazardous fluids, contaminated debris, steel tanks and piping. 279 yards of contaminated soil, 10,404 gallons of hazardous liquids, 10 steel tanks and piping were removed from the site.
Completed Area Name:	PROJECT WIDE

SUN CHEMICAL CORPORATION (Continued) **S106981240**

Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 01/22/1987
Comments: Completed Site Screening. Site inspection samplings in 1981 revealed elevated levels of lead, cyanide and zinc. Groundwater analyses did not indicate any contamination above drinking water standards.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Five-Year Review Reports
Completed Date: 12/14/2016
Comments: DTSC personnel conducted a site inspection on February 11, 2016 as part of the Five-Year Review, which was performed because contaminated soil remains on the Site above levels that would allow for unrestricted land use. Based on site conditions observed during the site inspection, DTSC concluded that the selected remedy for the Site remains protective of human health and the environment.

Waste Description: 2h-1,3,2-Oxazaphosphorin-2-Amine, N,N-Bis(2-Chloroethyl)Tetrahydro-, 2-Oxide (Or) Cyclophosphamide

Waste Code: U059
Waste Description: 5,12-Naphthacenedione, 8-Acetyl-10-[(3-Amino-2,3,6-Trideoxy)-Alpha-L-Lyxo-Hexopyranosyl)Oxy]-7,8,9,10-Tetrahydro-6,8,11-Trihydroxy-1-Methoxy-, (8s-Cis)- (Or) Daunomycin

Waste Code: U075
Waste Description: Dichlorodifluoromethane (Or) Methane, Dichlorodifluoro-

Waste Code: U089
Waste Description: Diethylstilbesterol (Or) Phenol, 4,4'-(1,2-Diethyl-1,2-Ethenediyl)Bis, (E)-

COSTCO (Continued) **1004677951**

Waste Code: U121
Waste Description: Methane, Trichlorofluoro- (Or) Trichloromonofluoromethane

Waste Code: U122
Waste Description: Formaldehyde

Waste Code: U129
Waste Description: Cyclohexane, 1,2,3,4,5,6-Hexachloro-, (1alpha, 2alpha, 3beta, 4alpha, 5alpha, 6beta)- (Or) Lindane

Waste Code: U132
Waste Description: Hexachlorophene (Or) Phenol, 2,2'-Methylenebis[3,4,6-Trichloro-

Waste Code: U150
Waste Description: L-Phenylalanine, 4-[Bis(2-Chloroethyl)Amino]- (Or) Melphalan

Waste Code: U151
Waste Description: Mercury

Waste Code: U159
Waste Description: 2-Butanone (I,T) (Or) Methyl Ethyl Ketone (Mek) (I,T)

Waste Code: U182
Waste Description: 1,3,5-Trioxane, 2,4,6-Trimethyl- (Or) Paraldehyde

Waste Code: U187
Waste Description: Acetamide, N-(4-Ethoxyphenyl)- (Or) Phenacetin

Waste Code: U188
Waste Description: Phenol

Waste Code: U200
Waste Description: Reserpine (Or) Yohimban-16-Carboxylic Acid, 11,17-Dimethoxy-18-[(3,4,5-Trimethoxybenzoyl)Oxy]-, Methyl Ester, (3beta, 16beta, 17alpha, 18beta, 20alpha)-

Waste Code: U201
Waste Description: 1,3-Benzenediol (Or) Resorcinol

Waste Code: U205
Waste Description: Selenium Sulfide (Or) Selenium Sulfide Ses2 (R,T)

Waste Code: U206
Waste Description: D-Glucose, 2-Deoxy-2-[[(Methylnitrosoamino)-Carbonyl]Amino]- (Or) Glucopyranose, 2-Deoxy-2-(3-Methyl-3-Nitrosoureido)-,D- (Or) Streptozotocin

Waste Code: U220
Waste Description: Benzene, Methyl- (Or) Toluene

Waste Code: U237
Waste Description: 2,4-(1h,3h)-Pyrimidinedione, 5-[Bis(2-Chloroethyl)Amino]- (Or) Uracil Mustard

Waste Code: U239
Waste Description: Benzene, Dimethyl- (I,T) (Or) Xylene (I)

COSTCO (Continued) **1004677951**

Waste Code: U240
Waste Description: 2,4-D, Salts & Esters (Or) Acetic Acid, (2,4-Dichlorophenoxy)-, Salts & Esters (Or) Dichlorophenoxyacetic Acid 2,4-D

Waste Code: U279
Waste Description: U279

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 09/25/2024

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/25/2024

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 09/25/2024

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/20/2024

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/16/2024
Date Data Arrived at EDR: 09/17/2024

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 09/16/2024

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

Next Scheduled EDR Contact: 04/14/2025
Data Release Frequency: Varies

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Version Date:	2022

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

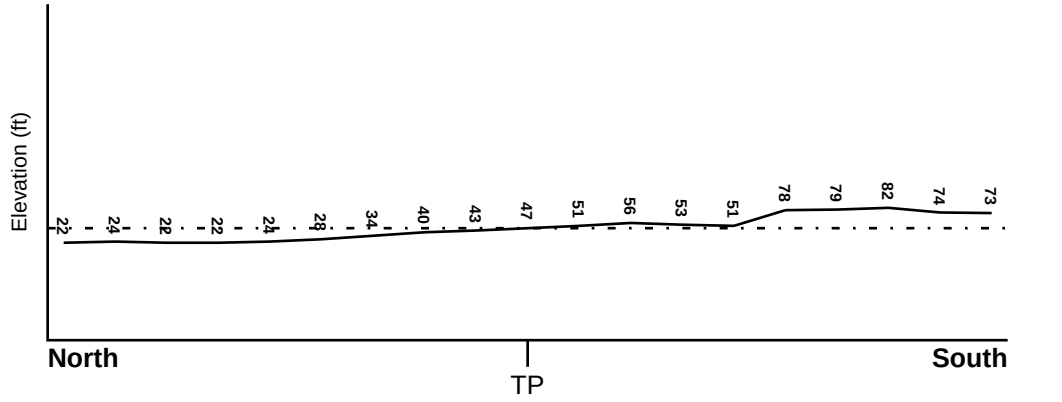
TOPOGRAPHIC INFORMATION

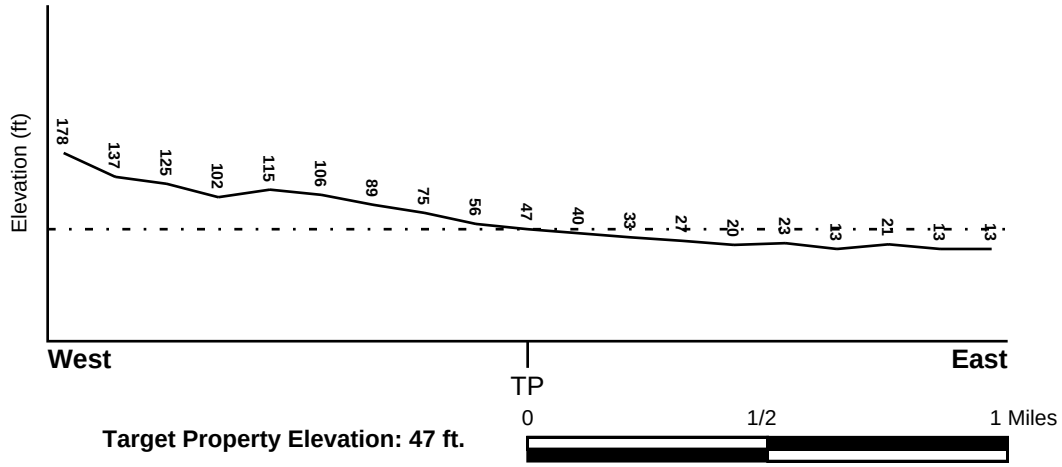
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES





0 1/2 1 Miles

Target Property Elevation: 47 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06081C0043E	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

06081C0131E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SAN FRANCISCO SOUTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

60G	1/2 - 1 Mile SSE	NNW

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:

Soil Map ID: 2

Soil Component Name: Orthents

Soil Surface Texture: variable

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	59 inches	variable	Not reported	Not reported	Max: Min:	Max: Min:

Soil Map ID: 3

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Ramboll Americas Engineering Solutions, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Oakland, CA 94607
Contact: Jodi Vanneman

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ramboll Americas Engineering Solutions, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ramboll Americas Engineering Solutions, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ramboll Americas Engineering Solutions, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

DISCLAIMER

This report has been prepared for the Sears Holdings Management Corporation with specific application to a Site Conceptual Model (SCM) for the Sears Automotive Service Center (Unit No. 1478) located at 1178 El Camino Real, San Bruno, California. This report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, either expressed or implied, is made as to the professional advice presented herein.

Changes in Site use and conditions may occur due to variations in rainfall, temperature, water usage, or other factors. Additional information, which was not available to the consultant at the time of this investigation, or changes, which may occur on the Site or in the surrounding area, may result in modification to the Site that would impact the summary presented herein. This report is not a legal opinion.

1 INTRODUCTION

SCS Engineers (SCS) was retained by the Sears Holdings Management Corporation (Sears) to complete a Site Conceptual Model (SCM) for the Sears Automotive Service Center (Unit No. 1478) (Sears Auto Center) located at 1178 El Camino Real, San Bruno, California (the "Site"). The SCM is a decision making tool where existing Site data and information are integrated and interpreted to increase our understanding of the nature and extent of contamination and its potential to impact public health and the environment.

The San Mateo County Health System, Ground Water Protection Program (San Mateo County GPP), is currently responsible for regulatory oversight of the Site (Case #880008). The Site is also located within the jurisdiction of the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) (Case #41-0476). This SCM was prepared in accordance with GPP guidelines.

2 SITE LOCATION AND DESCRIPTION

A Site Vicinity Map is provided as ***Figure 1*** and a Site Plan showing previous sampling locations and other Site features is provided as ***Figure 2***. The Site is located on the San Francisco Peninsula at an elevation of approximately 40 feet above mean sea level (MSL). Local topography slopes gently northeast toward the San Francisco Bay (***Figure 1***). The nearest surface water body is an unnamed tidal slough located approximately 250 feet north of Shaw Road, approximately 0.5 miles northeast from the Site, that drains to Colma Creek and the San Francisco Bay.

The Site consists of the Sears Auto Center and the associated parking lot and occupies San Mateo County Assessor's Parcel Number (APN) 014-316-330. The Site is surrounded by Sneath Lane and a shopping center to the North, residential and commercial properties to the East, the Shops at Tanforan to the south, and El Camino Real and commercial stores to the west. The Sears Auto Center is located in the northeast corner of the Tanforan Mall complex, situated between Sneath Lane to the north, Century Theaters to the south, and the San Bruno BART train station, entrance plaza, BART parking structure, and San Bruno Police Station to the east (***Figure 2***).

3 SITE HISTORY AND BACKGROUND

Records show that as early as 1925 the Site was the location of the Tanforan Horse Racing Track, which, in 1942, was used as a Relocation Center for Bay Area persons of Japanese ancestry. During the 1950s, the Site returned to use as a race track, which, maintained an "oil/gas corporation yard" near what is now the Sears Auto Center. Aerial photos show that in 1965 the Site was used as a golf course, which was located in the center of the track. The Tanforan shopping mall was constructed in 1969. The San Bruno BART station, BART parking structure, and San Bruno Police Station were constructed between 2000 and 2003 and the Century Theater/parking structure was built in 2006 and 2007.

4 SUMMARY OF PREVIOUS WORK

KNOWN SOURCE AREAS

Seven underground storage tanks (USTs) operated by Sears were formerly located at the Site: two 12,000-gallon gasoline USTs, two 6,000-gallon gasoline USTs, two 530-gallon bulk motor-oil USTs, and one 500-gallon used-oil UST (HLA, 1992). The four gasoline and two motor-oil USTs were reportedly removed in 1985 (Blaine Tech Services (BTS), 1985). The 500-gallon used-oil UST was reportedly removed in January 1987 (Combustion Engineering, 1987), however, its location was not reported.

Geophysical surveys have identified five subsurface anomalies (designated Anomalies A through E) within the boundaries of the Site, although distant to the location of the former USTs operated by Sears. Elevated levels of petroleum hydrocarbons have been detected near Anomalies D and E.

In February 2001, Sears received notification from a BART subcontractor, that a 100-gallon UST was uncovered at a depth of approximately 16 feet, near the southwest corner of the BART construction zone during excavation for the police station. According to this individual, the UST was old, had numerous rusted holes in the bottom, and the soil adjacent to it was "dark", with a "strong odor like gasoline or diesel". The UST was removed by a BART subcontractor. Field notes completed by BART's environmental consultant indicate that a sheen was present in groundwater in the vicinity of the UST (BART, 2010). The tank appeared to be located downgradient of MW-11 and cross-gradient of MW-4, in the vicinity of Anomaly E.

One additional potential off-Site source is the Shell service station (San Mateo County GPP Case # 880057) located on the southwest corner of Sneath Lane and El Camino Real, just over 1,000 feet west, southwest of the Sears Auto Center. The most recent *Groundwater Monitoring and Remediation Report-Third Quarter 2011* (Conestoga-Rovers & Associates 10/27/2011) was reviewed to evaluate the environmental significance of this site to the Sears Site. Significant fuel related hydrocarbon impacts to underlying soil and groundwater exist due to previous leaking USTs under the Shell station. A groundwater extraction and treatment system was reportedly operating from November 2005 to July 27, 2010. It is currently shut down pending the results of a rebound evaluation. Fourteen groundwater monitoring wells and two groundwater extraction wells are currently active. Six of the 14 monitoring wells are on the Shops at Tanforan property, but outside the Sear Auto Center Project boundary and lie between approximately 638 to 772 feet west, southwest of Sears monitoring well MW-10 (***Figures 3 and 9)***. The data from the Shell groundwater monitoring wells closest to MW-10 was reviewed and suggest the potential for groundwater impacts to the Sears Site from the Shell station appear unlikely. However, it should not be completely ruled out because according to Geotracker, *"The extent of MTBE in groundwater is slowly increasing in the most downgradient well. Therefore downgradient extent is not defined".*

PREVIOUS ENVIRONMENTAL INVESTIGATIONS

The nature and extent of petroleum constituents in soil and groundwater at the Site and its vicinity have been evaluated through a series of investigations dating to the UST removals in 1985. Initial investigative activities focused on potential subsurface impacts from the USTs operated by Sears. Later investigations were performed to evaluate the potential for environmental impacts in the BART construction area and in the vicinity of the San Bruno Police Station and Anomaly E. A summary of past Site sampling locations is provided below:

- Twenty-one groundwater monitoring wells (MW-1 through MW-21) installed on- and off-Site between 1992 and 2010;
- Three soil borings (B-1 through B-2) drilled in 1992 near the former gasoline and bulk motor-oil USTs;
- Seven cone penetration tests (CPTs) (ASC-2 through ASC-6; ASC-9; and ASC-10) advanced on-Site in 1996;
- Eight soil borings (SB-1 through SB-8) drilled on the BART property between 1997 and 1998;
- Fifty-eight direct-push sampling locations (GP-1 through GP-42; GP-44; GP-45; GP-47 through GP-51(2000); GP-51(2010) through GP-58; and GP-60) were advanced on- and off-Site between 1998 and 2010;
- Thirty-four utility trench locations (SS-01 through SS-03; SD-01 through SD-06; UT-01-01 through UT-01-04; UT-02-01 through UT-02-13; UT-03-01 through UT-03-06; UT-04-01; and UT-04-02) sampled in 1998 and 1999;
- Five soil vapor probes (SVP-13 through SVP-17) advanced near the San Bruno Police Station between 2004 and 2006;
- Fifteen indoor air samples collected from five locations in and around the San Bruno Police Station (IA-BNSW, IA-BSSW, IA-B109, IA-2ELEV, and IA-R1) between 2006 and 2009.

Tables 1 through 5 provide the following summaries of Site data:

- Table 1 - Summary of Soil Sample Analytical Results
- Table 2 - Summary of Groundwater Sample Analytical Results
- Table 3 - Summary of Groundwater Well Elevation Data
- Table 4 - Summary of Soil Vapor Sample Analytical Results
- Table 5 - Summary of Indoor Air Sample Analytical Results

A narrative of past Site investigations is provided below:

- Harding Lawson Associates (HLA) prepared an *Evaluation of Petroleum Hydrocarbons in Soil and Groundwater for Sears* (HLA 1992). The evaluation included review of information regarding the former USTs operated by Sears that were removed between 1985 and 1987. According to the HLA report, no reports describing soil conditions or soil sample analytical data associated with these UST removals or associated excavations were available. In March 1985 soil samples were reportedly collected by BTS during "soil aeration" activities on site, but no analytical data was identified;

  The HLA report also states that during the removal of this UST, two soil samples were collected at a depth of ten feet under the direction of the County, and low levels of petroleum hydrocarbons were detected in the samples, but no additional information was available. The location of the USTs described above as well as the associated excavation limits, dispenser islands, and HLA borings (B-1 through B-3) described below are shown on ***Figure 2***;

- In March 1992, HLA drilled three borings, B-1 through B-3, and installed three groundwater monitoring wells, MW-1 through MW-3, to evaluate subsurface conditions in the vicinity of the former gasoline and bulk motor oil UST areas. This was the first documented subsurface investigation for this project;

- Select soil and groundwater samples were collected and analyzed for total petroleum hydrocarbons (TPH), benzene, toluene, ethylbenzene, and xylenes (BTEX), oil and grease, volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), total metals, and organic lead. TPH in the gasoline range (TPH-g) concentration in soil and groundwater were detected at maximum concentrations of 2,900 milligrams per kilograms (mg/kg) and 2,400 micrograms per liter (µg/L), respectively (Harding Lawson Associates, 1992). It should also be noted that groundwater monitoring wells MW-1 through MW-3, when first sampled, were evaluated for floating free product and no free product was observed (Harding Lawson Associates, 1992);

- In November through December 1994 the dispenser island canopy, dispenser islands, product lines, and vent lines were reportedly removed from the Site. The work was conducted by Fluor Daniel GTI and during these activities 27 confirmation soil samples were collected from 3 to 10 feet below the dispenser islands and product lines. Soil samples were analyzed for TPH was detected at a maximum concentration of 1,900 mg/kg (Fluor Daniel GTI, 1996);

- In November 1996, Fluor Daniel GTI performed seven CPTs, ASC-2 through ASC-6, ASC-9, and ASC-10 on-Site and installed three groundwater monitoring wells (MW-4, MW-5, and MW-6) near the former Sears UST area. Elevated hydrocarbon concentrations were detected indicating that the down-gradient extent of impacts to groundwater had not been defined (Fluor Daniel GTI, 1997);

- In August 1997 and February 1998, CH2M Hill/DMJM collected eight grab groundwater samples and one soil sample from eight soil borings (SB-1 through SB-8) drilled as part

of the BART/San Francisco International Airport (BART/SFO) expansion project. Petroleum related constituents were detected in seven of the grab groundwater samples (CH2M Hill/DMJM, 1998);

- In August and September 1998, Fluor Daniel GTI collected samples from nine direct-push locations (GP-1 through GP-9) completed primarily in the BART construction area; soil and grab groundwater samples were analyzed for TPHg and BTEX. Monitoring wells MW-7 and MW-8 were also installed north of the Sears Auto Center during this investigation. Petroleum related constituents were detected in four soil samples and seven grab groundwater samples collected during the investigation (Fluor Daniel GTI, 1998);

- In December 1998 and January 1999, IT Corporation (IT) collected 37 soil samples at various depths from utility trenches including the sanitary sewer, storm drain, telephone, water, electric, and gas tranches (SS-01 through SS-03, SD-01 through SD-06, and UT-01 through UT-04). The sampling occurred during BART construction activities. Six of the 37 samples collected contained petroleum related constituents (IT, 1999);

- In January 1999, IT collected soil and grab groundwater samples from 33 direct-push locations (GP-10 through GP-42). Petroleum related constituents were detected in soil samples collected from 23 of the locations and in 16 of the grab groundwater samples. Three additional monitoring wells, MW-9 through MW-11, were also installed (IT, 1999);

- In December 1999, IT performed CPTs at four locations, CPT-1 through CPT-4, and collected a groundwater sample from one Hydropunch® boring, HP-1. CPT was conducted to evaluate Site stratigraphy and potential vertical gradients. Three groundwater samples were collected at varying depths from the HP-1. Petroleum related constituents were detected in one of the groundwater samples collected from HP-1 at a depth of 30 feet below ground surface (bgs), (IT, 1999b);

- In April 2000, IT advanced seven direct-push sampling locations, GP-44, GP-45, and GP-47 through GP-51. Petroleum related constituents were detected in soil and groundwater at all seven locations (Burns & McDonnell, 2005);

- In September 2000, Gregg Drilling and Testing, Inc., under contract to IT, destroyed monitoring well MW-5 by pressure grouting. The well was destroyed due to its location within the BART construction zone. Field personnel have been unable to locate MW-8 since February 2000. In October 2002, Burns & McDonnell personnel used a global positioning system (GPS) unit to estimate the location of MW-8, and observed the area to be covered by a cinder-block wall constructed by BART (Burns & McDonnell, 2005);

- In May 2004, Burns & McDonnell conducted a Site investigation. Burns & McDonnell oversaw the installation of four one-inch diameter groundwater monitoring wells, MW-12 through MW-15, and two soil vapor points, SVP-13 and SVP-14. Monitoring well MW-13 and soil vapor point SVP-13 were installed in the vicinity of Anomaly E. Light non-aqueous phase liquid (LNAPL) and elevated concentrations of petroleum related

constituents were previously detected in the vicinity of Anomaly E (Burns & McDonnell, 2006). One groundwater monitoring well, MW-12, is in the general area of Anomaly D. One groundwater monitoring well, MW-15, located on East Huntington Avenue was installed to act as a piezometric point for evaluation of groundwater elevation (Burns & McDonnell, 2005);

- In May 2004, two groundwater monitoring wells, MW-3 and MW-4, were properly destroyed. Both wells were pressure grouted up to grade with cement. These wells were destroyed to accommodate the construction of a multi-story parking garage, planned for construction in that area (Burns & McDonnell, 2005);

- In November 2005, well MW-11 was properly destroyed after being damaged and covered up during the Tanforan Mall expansion. The well was grouted in place from the bottom of the casing to within 6 inches of the ground surface (Burns & McDonnell, 2006a);

- In January 2006, Burns & McDonnell directed the installation of three new soil vapor probes, SVP-15 through SVP-17, in the vicinity of the San Bruno Police Station, to evaluate potential concentrations in soil vapor adjacent to the building (Burns & McDonnell, 2006b);

- In October 2006, Burns & McDonnell directed excavation activities in the area designated as Anomaly E, in an attempt to locate and remove a suspected source of elevated concentrations of petroleum hydrocarbon constituents detected in nearby monitoring wells. The area was excavated to approximately 15 ft bgs, when possible, until groundwater was encountered. Soil samples were taken from the sidewalls and the stockpiles of excavated soil. Petroleum related constituents were not detected in soil samples collected from the excavation sidewalls. Analysis of the composite samples of the stockpiled soil indicated TPH-mo concentrations between 12 and 36 milligrams per

  kilogram (mg/kg). A total of 1,100 lbs of Calcium Peroxide was placed at the bottom of the excavation for in-situ treatment of hydrocarbon impacted soil and groundwater (Burns & McDonnell, 2006c).

  In response to the San Mateo County Health Services Agency (SMCHSA) letter, issued June 26, 2007, soil vapor sampling was discontinued, adjustments were made to the groundwater sampling schedule, and groundwater monitoring was changed from quarterly to semi-annual sampling (Burns & McDonnell, 2008);

- In January 2010, Burns & McDonnell directed the installation of six additional groundwater monitoring wells (MW-16 through MW-21). Three of the monitoring wells, MW-16, MW-18, and MW-20, were installed in the deeper groundwater zone. Nine direct push soil borings, GP-51(2010) through GP-58, and GP-60 were advanced and sampled in the vicinity of monitoring well MW-2 north of the former Sears USTs. Please note that two of the borings completed at the Site have been named GP-51. The boring GP-51(2010) completed during this investigation (the second boring named GP-51) is shown on the Site Plan with an asterisk and footnote explaining the nomenclature.

Petroleum related constituents were detected in all soil samples collected from the borings completed during this investigation. Additionally, the five soil vapor probes, SVP-13 through SVP-17, and groundwater monitoring wells MW-7 and MW-15 were properly destroyed during this phase of work (Burns & McDonnell, 2010).

5 GEOLOGY AND HYDROGEOLOGY

Burns & McDonald (2005) provided the following description of Site geology:

> "The Site is located on the eastern flatlands of San Francisco Peninsula bordering San Francisco Bay. The near-surface geology in the area of the Site has largely been controlled by the changing morphology of the Bay Area over recent geologic time. Bedrock in the area is comprised of Jurassic-Age Franciscan Assemblage, which may be observed in outcrops in the hills surrounding the area to the north, south, and west. Typically, the top of bedrock occurs at depths from about 500 feet to 600 feet bgs in this general area. Overlying the bedrock are the Merced and Colma formations, a series of Quaternary-Age alluvial and marine deposits (USGS, 1983).
>
> The Site is immediately underlain by both fine- and coarse-grained sediments. Gravelly and sandy fill is locally present just below asphalt to approximately three to five feet bgs. The fill is underlain by clay/silt to a depth of approximately 12 to 15 feet bgs. The clay/silt unit is underlain by a laterally continuous silty sand to sand, with local gravel lenses, from approximately 15 to at least 50 feet bgs".

Based on drilling observations, the first encountered water bearing zone beneath the Site occurs in this sand and appears to under confined to semi-confined conditions. For example, during the drilling of wells MW-19 and MW-21 first groundwater was logged at depths of 18 to 20 feet bgs, however, water levels have been measured in these wells at depths ranging from approximately 6 to 12 feet bgs. The Shallow Zone groundwater flow has historically been toward the northeast. Shallow groundwater gradients at the Site have varied between less than 0.01 feet/foot, often described as relatively flat, to 0.05 feet/foot. The Deep Zone groundwater generally flows in a north to north-northeasterly direction. Groundwater gradients in the Deep Zone at the Site have varied between 0.03 feet/foot to 0.04 feet/foot. A summary of groundwater elevation data for the Site is provided in ***Table 3***.

6 REGULATORY SCREENING LEVELS

Based on the Site location and setting, Environmental Screening Levels (ESLs) established by the SFBRWQCB for residential properties located above groundwater that is a potential source of drinking water are appropriate screening levels for soil, groundwater, and soil vapor at the Site. San Mateo County GPP requires use of residential use risk levels, even in commercial areas, because changes in land use may occur over time and without a deed restriction commercial properties can be redeveloped for residential use. Commercial ESLs are appropriate for indoor air at the San Bruno Police Station since existing use is essentially commercial and

indoor air detections are only appropriate for an existing building. Chemicals detected at concentrations below ESLs are generally assumed to not pose a significant threat to human health or the environment.

ESLs as are used as decision making guidance and do not have the effect of law or regulations. Appropriate ESLs for the Site are summarized below:

Shallow Soil (less than 10 feet bgs; Residential ESLs):

TPH-g = 83 mg/kg
Benzene = 0.044 mg/kg
Ethylbenzene = 2.3 mg/kg
Toluene = 2.9 mg/kg
Xylenes = 2.3 mg/kg

Deep Soil (greater than 10 feet bgs; Residential ESLs):

TPH-g = 83 mg/kg
Benzene = 0.044 mg/kg
Ethylbenzene = 3.3 mg/kg
Toluene = 2.9 mg/kg
Xylenes = 2.3 mg/kg

Groundwater:

TPH-g = 100 µg/L
Benzene = 1.0 µg/L
Ethylbenzene = 30 µg/L
Toluene = 40 µg/L
Xylenes = 20 µg/L

Soil Vapor (Residential ESLs):

TPH-g = 10,000 $\mu g/m^3$
Benzene = 84 $\mu g/m^3$
Ethylbenzene = 980 $\mu g/m^3$
Toluene = 63,000 $\mu g/m^3$
Xylenes = 21,000 $\mu g/m^3$

Indoor Air (Commercial ESLs):

TPH-g = 14 $\mu g/m^3$
Benzene = 0.14 $\mu g/m^3$
Ethylbenzene = 1.6 $\mu g/m^3$
Toluene = 88 $\mu g/m^3$
Xylenes = 29 $\mu g/m^3$

Analytical results from past Site investigations are summarized in ***Tables 1 through 5***.

7 EXTENT OF CONTAMINATION

Light Non-Aqueous Liquid (LNAPL)

Light non-aqueous phase liquid (LNAPL) was detected in grab groundwater samples collected from borings GP-20 and GP-49, in the vicinity of Anomaly E (Burns & McDonnell, 2006c). LNAPL has not been observed in any other grab groundwater samples collected, or in any samples collected from Site monitoring wells; however, concentrations of TPH-g in select grab groundwater samples, and in samples collected from monitoring wells MW-13 and MW-19, suggest that LNAPL may be present in some areas of the Site.

Unsaturated Zone

Depth to groundwater measurements collected from Site monitoring wells dating to 1992 indicate that groundwater is present at the Site in the Shallow Zone at depths ranging from approximately 13 to 30 feet bgs. The unsaturated zone is therefore assumed to range from 0 (ground surface) to 13 feet bgs. The lateral extent of contamination in the unsaturated zone is shown on ***Figures 5a and 6a***. A summary of soil sample analytical results for the Site is provided in ***Table 1***.

Saturated Zone

The saturated zone, or smear zone, at the Site is defined above as ranging between 13 to 30 feet bgs. The lateral extent of contamination in the saturated zone is shown on Figures 5b and 6b. As shown on these figures, the lateral extent of contamination has been generally defined (San Mateo County GPP, 2010). Only one soil sample collected at 30 feet bgs contained petroleum related constituents. The highest concentrations of petroleum related constituents have typically been observed at depths of 10 feet to 20 feet bgs. Only two soil samples have been collected at the Site at depths greater than 30 feet bgs, boring GP-45 at 35 feet and 40 feet bgs. Petroleum related constituents were not detected in either of these samples. A summary of soil sample analytical results for the Site is provided in ***Table 1***.

Groundwater

The lateral extent of TPH-g and benzene in groundwater are shown on ***Figures 8a and 8b***, respectively, for the Shallow Zone. As shown on these figures, the lateral extent of groundwater impacts in the Shallow Zone has been generally defined (San Mateo County GPP, 2010).

TPH-g and benzene have not been detected in Deep Zone wells MW-16, MW-18, and MW-20 during monitoring conducted in March and September 2011. Benzene was detected in well MW-18 in February 2010 at a concentration of 1.4 µg/L and TPH-g was detected in wells MW-18 and MW-20 at concentrations up to 959 µg/L. Additionally, TPH-d toluene, xylenes, and MTBE were variously detected in the Deep Zone wells prior during 2010. A summary of groundwater sample analytical results for the Site is provided in ***Table 2***.

Subsurface Vapor

Five soil vapor probes, SVP-13 through SVP-17, were installed at the Site and monitored between 2004 and 2007 before being decommissioned. The soil vapor probe locations are shown on Figure 2 and are all located within the vicinity of the San Bruno Police Station. The soil vapor probes were screened between 4.5 feet and 14 feet bgs. Petroleum related constituents were detected in soil vapor in all soil vapor probes at the Site. A summary of soil vapor analytical results for the Site is provided in ***Table 4***

Indoor Air

Three rounds of in indoor air sampling have been performed at the San Bruno Police Station since 2006. During each event samples were collected from the basement, second floor, and roof of the building. As shown on ***Table 5***, TPH-g and BTEX were variously detected in indoor and outdoor (roof) air during these sampling events. However, when outdoor background concentrations are subtracted from indoor concentrations only TPH-g, benzene, and ethylbenzene have been detected at concentrations exceeding commercial ESLs. Elevated detection limits for the background sample collected from the roof during the 2007 sampling event limit the usefulness of data from this sampling event.

8 CONCLUSIONS AND RECOMMENDATIONS

Based on the results of past Site Investigations, SCS provides the following conclusions:

- There appear to be at least two separate source areas on-Site: 1) the former gasoline and bulk motor-oil USTs operated by Sears and 2) the Anomaly E/San Bruno Police Station Area, which is likely related to activities at the former Tanforan Race Track.

- The lateral and vertical extent of soil and groundwater impacts are generally well defined as shown on ***Figures 5 through 8***.

- Significant concentrations of TPH-g and BTEX are present in groundwater near Anomaly E and the San Bruno Police Station. In accordance with San Mateo Count GPP requests, SCS recommends completion of a feasibility study/pilot test work plan to remediate this area. This document is currently being prepared by SCS on behalf of Sears.

- Based on drilling observations, the first encountered water bearing zone beneath the Site occurs at a depth of approximately 18 to 20 feet bgs within a sandy zone and appears to be under confined to semi-confined conditions. As such, wells MW-19 and MW-21 appear to be screened adequately to collect representative Shallow Zone water samples. San Mateo County GPP had previously requested reinstallation of these wells, however reinstallation is not recommended by SCS.

- Current data suggests indoor air within the San Bruno Police Station may be impacted by vapor intrusion associated with the Anomaly E source area. However, as indicated above, there is a relatively limited indoor air data set and past indoor air analysis have not been definitive. Due to the importance of this issue, SCS recommends additional indoor air quality sampling/analysis within the San Bruno Police Station in accordance with the Workplan provided as ***Appendix B***. Concurrently, Sears has recently obtained as-built plans of the San Bruno Police Station from BART and is in the process of selecting an HVAC Contractor/Mechanical Engineer to design and implement HVAC upgrades to the police station to mitigate indoor air impacts, if warranted based on the proposed additional indoor air sampling/analysis.

Notes:

bgs = Below ground surface

J = Estimated concentration

MTBE = Methyl tert butyl ether

TPH-d = Total petroleum hydrocarbons as diesel fuel

TPH-g = Total petroleum hydrocarbons as gasoline

TPH-mo = Total petroleum hydrocarbons as motor oil

mg/kg = milligrams per kilogram

-- = Not Analyzed

U = Analyte not detected at specified laboratory reporting limit

Two on site soil sample locations named GP-51 exist on site. "*" or GP-51* designates the most recent GP-51 collected on 1/26/2010.

ESL = Environmental Screening Level - San Francisco Bay Regional Water Quality Control Board, Interim Final - November 2007, Revised May 2008 (Tables A-1 and C-1: Applies to residential property above groundwater that is a current or potential drinking water resource).

Notes:
D=Deep
S= Shallow
V=Vadose
ug/L= micrograms per liter
J = Estimated concentration
MTBE= Methyl tert butyl ether
TDS= Total dissolved solids
TPH-g = Total petroleum hydrocarbons as gasoline
TPH-d = Total petroleum hydrocarbons as diesel fuel
TPH-mo = Total petroleum hydrocarbons as motor oil
U= Analyte not detected above listed laboratory reporting limit
-- = Not Analyzed
NE = Not established
ESL = Environmental Screening Level - San Francisco Bay Regional Water Quality Control Board, Interim Final - November 2007, Revised May 2008 (Table F-1a: Applies to property above groundwater that is a current or potential drinking water resource).

ATTN: Ms. Anne Jurek

RE: **2018 First Semi-Annual Groundwater Monitoring Report**
Sears Automotive Service Center (No. 1478)
1178 El Camino Real
San Bruno, California

Dear Ms. Jurek:

On behalf Sears Holdings Management Corporation (Sears), AECOM (formerly URS Corporation) has prepared this *2018 First Semi-Annual Groundwater Monitoring Report* for the Sears Automotive Service Center (No. 1478) located at 1178 El Camino Real in San Bruno, California. The activities presented in this report were conducted around Anomaly E located at the Bay Area Rapid Transit (BART) system/Police Station and next to the Sears Auto Center.

If you have any questions regarding this report, or need additional information concerning the subject site, please call us at (714) 567-2400.

Sincerely,
AECOM

Joseph R. Liles, PG, CHG
Principal Geologist

2018 First Semi-ANNUAL GROUNDWATER MONITORING REPORT

Sears Automotive Service Center (No. 1478)
1178 El Camino Real
San Bruno, California

May 21, 2018

This 2018 First Semi-Annual Groundwater Monitoring Report for the Sears Automotive Service Center (No. 1478) in San Bruno, California was prepared by AECOM (formerly URS Corporation) on behalf of the Sears Holdings Management Corporation in a manner consistent with the level of care and skill ordinarily exercised by professional engineers, geologists, and environmental scientists. This report was prepared under the technical direction of the undersigned.

AECOM

Joseph R. Liles, PG, CHG
Principal Geologist
California Professional Geologist No. 8297

1.0 INTRODUCTION

AECOM (formerly URS Corporation [URS]) was retained by the Sears Holdings Management Corporation, to conduct the 2018 First Semi-annual groundwater monitoring event at the Sears Automotive Service Center (No. 1478) located at 1178 El Camino Real in San Bruno, California (Site). A vicinity map showing the Site location is provided as **Figure 1**, and a detailed Site plan showing the site and well locations is provided as **Figure 2**.

The San Mateo County Health System, Ground Water Protection Program (San Mateo County GPP), is currently responsible for regulatory oversight of the environmental work conducted at this Site. The groundwater sampling was conducted to evaluate current groundwater conditions at the Site and in the vicinity of the Site. Specifically, the sampling assessed the groundwater condition which was historically impacted with total petroleum hydrocarbons (TPH) as gasoline (TPHg) and gasoline constituents' benzene, toluene, ethylbenzene, and xylenes (BTEX).

Groundwater monitoring has been conducted at the Site since April 1992 to assess the nature and extent of groundwater impacts. A dual-phase extraction pilot test was conducted in April 2015. Results of the dual-phase extraction (DPE) pilot study for the treatment of TPHg- and BTEX-impacted soil and groundwater were presented in the *2015 First Semi-Annual Groundwater Monitoring and Dual-Phase Extraction Pilot Test Report* dated June 19, 2015 (AECOM, 2015). Groundwater data from this September 2017 sampling event were compared to the appropriate State Water Resources Control Board's Low-Threat Underground Storage Tank Case Closure Policy (LTCP) screening results to evaluate the effectiveness of the DPE mass removal and determine the readiness of the Site for closure. Field activities for the 2018 First Semi-annual groundwater monitoring event included the following:

- Gauging of 12 monitoring wells on March 15, 2018,
- Sampling and analysis of 11 monitoring wells (MW-1, MW-2, MW-6, MW-9, MW-10, MW-12, MW-14, MW-19R, MW-21R, MW-22, and MW-23) on March 15, 2018.

2.0 SITE BACKGROUND

The Site is bounded by Sneath Lane and a shopping center to the north, residential and commercial properties to the east, the Shops at Tanforan to the south, and El Camino Real and commercial stores to the west. As shown on **Figure 2**, the Sears Auto Center is located in the northeast corner of the Tanforan Mall complex, situated between Sneath Lane to the north, Century Theaters to the south, and the San Bruno Bay Area Rapid Transit (BART) train station, entrance plaza, BART parking structure, and San Bruno Police Station to the east (SCS Engineers, 2013).

2.1 SITE HISTORY

Records show that as early as 1925, the Site was the location of the Tanforan Horse Racing Track which, in 1942, was used as a Relocation Center for Bay Area persons of Japanese ancestry. During the 1950s, the Site returned to use as a race track which maintained an "oil/gas corporation yard" near what is now the San Bruno Police Station. Aerial photos show that in 1965, the Site was the location of a golf course which occupied the central area of the track oval. The Tanforan shopping mall was constructed in 1969. The San Bruno BART station, BART parking structure, and San Bruno Police Station were constructed between 2000 and 2003, and the Century Theater/parking structure was built in 2006 and 2007 (SCS Engineers, 2013).

In February 2001, a BART subcontractor uncovered a 100-gallon underground storage tank (UST) at a depth of approximately 16 feet below ground surface (bgs) during excavation for the police station, near the southwest corner of the BART construction zone, over 300 feet from the former gasoline and oil UST areas associated with the Sears Auto Center. According to this subcontractor, the UST was old, had numerous rusted holes in the bottom, and the soil adjacent to it was "dark", with a "strong odor like gasoline or diesel." The UST was removed by a BART subcontractor. Field notes completed by BART's environmental consultant indicate that a sheen was present on the groundwater in the vicinity of the UST (BART, 2010). The tank appeared to be located near the southern corner of the San Bruno Police Station, which is the general area where the petroleum hydrocarbon mass associated with Anomaly E is located (**Figure 2**). The old 100-gallon UST was most likely associated with the former racetrack oil/gas yard.

2.2 GEOLOGY AND HYDROGEOLOGY

2.2.1 Regional Geology and Hydrogeology

The Site is located on the eastern flatlands of San Francisco Peninsula bordering San Francisco Bay at an elevation of approximately 40 feet above mean sea level (MSL). Local topography slopes gently northeast toward San Francisco Bay. The near-surface geology in the area of the Site has largely been controlled by the changing morphology of the Bay Area over recent geologic time. Bedrock in the area is comprised of Jurassic-Age Franciscan Assemblage, which may be observed in outcrops in the hills surrounding the area to the north, south, and west. Typically, the top of bedrock occurs at depths from about 500 feet to 600 feet bgs in this general area. Overlying the bedrock are the Merced and Colma Formations, a series of Quaternary-Age alluvial and marine deposits (U.S. Geological Survey [USGS], 1983 and Burns & McDonnell, 2005).

The nearest surface water body is an unnamed tidal slough located approximately 0.5 mile northeast of the Site, that drains to Colma Creek and then to the San Francisco Bay.

2.2.2 Site Geology and Hydrogeology

The Site is immediately underlain by both fine- and coarse-grained sediments. Gravelly and sandy fill is locally present just below asphalt to approximately 3 to 5 feet bgs. The fill is underlain by clay/silt to a depth of approximately 12 to 15 feet bgs. The clay/silt unit is underlain by a laterally continuous silty sand to sand, with local gravel lenses, from approximately 15 to at least 50 feet bgs (Burns & McDonnell, 2005).

Based on drilling observations, the first encountered water-bearing zone beneath the Site (Shallow Zone) occurs in the sand described above and appears to be under confined to semi-confined conditions. For example, during the drilling of Wells MW-19 and MW-21, first groundwater was logged at depths of 18 to 20 feet bgs, but rose to depths ranging from approximately 6 to 12 feet bgs in subsequent measurements after the wells were installed. The Shallow Zone groundwater flow direction has historically been toward the northeast. Shallow groundwater gradients at the Site have been relatively flat varying between less than 0.01 and 0.05 foot/foot (SCS Engineers, 2013). The Deep Zone groundwater generally flows in a north to north-northeasterly direction. Groundwater gradients in the Deep Zone at the Site have varied between 0.03 and 0.04 foot/foot (SCS Engineers, 2013).

2.3 PREVIOUS SITE ASSESSMENT INVESTIGATIONS

The nature and extent of petroleum constituents in soil and groundwater at the Site have been evaluated through a series of investigations starting with the UST removals at the nearby Sears Auto Center in 1985. Initial investigative activities focused on potential subsurface impacts from the USTs operated by Sears. Later investigations were performed to evaluate the potential for environmental impacts in the BART construction area and in the vicinity of the San Bruno Police Station around the general area where the 100-gallon UST was discovered at and near Anomaly E. Previous investigation activities included the following:

- Twenty-one groundwater monitoring wells (MW-1 through MW-21) installed on- and off-Site between 1992 and 2010;
- Three soil borings (B-1 through B-3) drilled in 1992 near the former gasoline and bulk motor-oil USTs;
- Six cone penetration tests (CPTs; ASC-2 through ASC-5, ASC-9, and ASC-10) advanced on-Site in 1996;
- Eight soil borings (SB-1 through SB-8) drilled on the BART property between 1997 and 1998;
- Fifty-eight direct-push sampling locations (GP-1 through GP-42, GP-44, GP-45, GP-47 through GP-58, and GP-60) were advanced on- and off-Site between 1998 and 2010;
- Thirty-four utility trench locations (SS-01 through SS-03; SD-01 through SD-06; UT-01-01 through UT-01-04; UT-02-01 through UT-02-13; UT-03-01 through UT-03-06; UT-04-01; and UT-04-02) were sampled in 1998 and 1999;
- Five soil vapor probes (SVP-13 through SVP-17) installed near the San Bruno Police Station between 2004 and 2006; and
- Forty-two indoor air samples collected from six locations in and around the San Bruno Police Station between 2006 and 2014.

- Four groundwater monitoring wells (MW-19R, MW-21R, MW-22, and MW-23) were installed in the vicinity of the San Bruno Police Station in 2015;
- Four soil vapor probes (SV-1 through SV-4) installed near the San Bruno Police in 2016; and
- Three dual-phase extraction wells (DPE-1, DPE-2, DPE-3) were installed within the Anomaly E area, in the vicinity of the San Bruno Police Station in 2017.

A detailed summary of past soil, soil vapor, and groundwater investigations is provided in the *Site Conceptual Model and Additional Screening Indoor Air Quality Monitoring Workplan* (SCS Engineers, 2011). The indoor air sampling is summarized in the *Additional Screening Indoor Air Quality Monitoring Summary Report* (URS, 2015).

2.4 NATURE AND EXTENT OF IMPACTED SOIL AND GROUNDWATER

Brief discussions of the nature and extent of impacts to soil and groundwater are provided below based on the summaries presented in the *Feasibility Study and Corrective Action Plan* (SCS Engineers, 2013). These summaries are based on historical data, which shows that natural attenuation of the petroleum hydrocarbons is most likely occurring.

2.4.1 Unsaturated Zone Soils

Depth to groundwater measurements collected from Site monitoring wells dating to 1992, indicate that groundwater is present at the Site in the Shallow Zone at depths ranging from approximately 6 to 30 feet bgs. The unsaturated or vadose zone is therefore assumed to extend from ground surface to 6 feet bgs.

2.4.2 Saturated Zone Soils

Based on the groundwater measurements indicated above, the saturated zone or smear zone at the Site might range between 6 to 30 feet bgs. However, the practical extent of the smear zone would actually occur between 10 and 20 feet bgs where the highest concentrations of petroleum-related constituents have typically been observed. Only one soil sample collected at 30 feet bgs contained detectable petroleum-related constituents, and the only two deeper soil samples collected at the Site (boring GP-45 at 35 and 40 feet bgs) contained no detectable petroleum hydrocarbons. The lateral extent of saturated zone impacts has been generally defined for the Site (San Mateo County GPP, 2010).

2.4.3 Light Non-Aqueous Phase Liquid (LNAPL)

Light non-aqueous phase liquid (LNAPL) was detected in groundwater grab samples collected from borings GP-20 and GP-49, in the vicinity of Anomaly E (Burns & McDonnell, 2006). Measurable LNAPL has not been observed in any other groundwater grab samples or in any samples collected from Site monitoring wells. However, the relatively high concentrations of TPHg in certain groundwater grab samples and in samples collected from monitoring Wells MW-13 (which had sheen in March 2018) suggest that sorbed petroleum hydrocarbon mass with the potential to form LNAPL may be present in Site soil in some areas around Anomaly E.

2.4.4 Groundwater

The lateral extent of groundwater impacts in the Shallow Zone has been generally defined for the Site (San Mateo County GPP, 2010).

TPHg, benzene, and other petroleum hydrocarbon related compounds were not detected in Deep Zone Wells MW-16, MW-18, and MW-20 during monitoring conducted in March and September 2011. Benzene was detected in Well MW-18 in February 2010 at a concentration of 1.4 micrograms

per liter (µg/L), and TPHg was detected in Wells MW-18 and MW-20 at concentrations up to 959 µg/L. Additionally, TPH as diesel (TPHd), toluene, xylenes, and methyl tert-butyl ether (MTBE) were variously detected in the Deep Zone wells during 2010. Based on the lack of detected concentrations and historically sporadic/limited detections, the lateral extent of groundwater impacts in the Deep Zone has also been generally defined for the Site. These three wells were destroyed as part of the DPE pilot test activities in April 2015.

2.4.5 Subsurface Vapor

Five soil vapor probes, SVP-13 through SVP-17, were installed at the Site and monitored between 2004 and 2007 before being decommissioned. The former soil vapor probe locations are shown on **Figure 2** and were all located within the vicinity of the San Bruno Police Station. Petroleum-related constituents were detected in soil vapor in all soil vapor probes at the Site.

2.4.6 Indoor Air

During the most recent round of sampling in October 2014, indoor air concentrations of petroleum-related constituents were generally low and below commercial/industrial screening levels, with the exception of benzene (URS, 2015). Estimated cancer risks associated with the detected benzene concentrations (including background) ranged from 1.1×10^{-6} to 2.3×10^{-6}. These estimated cancer risks are within the risk management range for commercial/industrial exposures. The highest concentration (just over twice the screening level) was detected in a sample from the south basement stair well, which is isolated and minimally occupied and appears to be somewhat atmospherically isolated from the rest of the Police Station by spring-actuated heavy metal doors. This slightly higher benzene result is consistent with the previous air sampling data for the south basement stair well.

3.0 HEALTH AND SAFETY

AECOM updated the Site-specific Health & Safety Plan (HSP) to address the following:

- Identify and describe potentially hazardous substances, which may be encountered during field operations;
- Specify protective equipment and clothing for onsite activities; and
- Outline measures to be implemented in the event of an emergency.

AECOM field personnel and AECOM subcontractors reviewed the HSP prior to commencing the field procedures. Field monitoring activities were recorded in the HSP, which is maintained in the project files at AECOM' Orange office. A copy of the HSP remained onsite during field operations.

4.0 SEMI-ANNUAL GROUNDWATER MONITORING

Field activities for the 2018 First Semi-annual groundwater monitoring were completed on March 15, 2018, and consisted of gauging of 12 groundwater monitoring wells and post-purge sample collection and analysis of 11 groundwater monitoring wells. A description of the monitoring methods is presented below.

4.1.1 Groundwater Gauging

Prior to purging and sampling, water levels were gauged to the nearest 0.01 foot using a Solinst electronic interface probe. The depth to water was measured relative to the surveyed top of well casing. Water level measurements for the 2018 First Semi-annual groundwater monitoring event were recorded on a gauging log and are provided in **Table 1**. One groundwater monitoring well (MW-13) had a detectable separate-phase product (sheen).

4.1.2 Purging and Sampling Methods

After gauging, the wells were purged and sampled using low-flow/low-stress procedures (U.S. Environmental Protection Agency [USEPA]/540/S-95/504, April 1996) with verbal approval from Jacob Madden of the San Mateo County Health System (SMCHS) on April 14, 2015. Low-flow purging was conducted to minimize the impact of the purging process on groundwater chemistry during sample collection, and to minimize the volume of water purged and disposed. Except for Wells MW-12 and MW-14, a Grundfos® submersible well pump was used to purge the remaining wells at rates of approximately 300 to 400 milliliters per minute (ml/min). Wells MW-12 and MW-14 were purged with a peristaltic pump (due to the wells being 1 inch in diameter).

Water quality indicator parameters were used to determine purging needs prior to sample collection in each well. The goal was to minimize drawdown where possible, with frequent monitoring of water quality parameters. Particular care was taken to insert the pump at the desired interval in the well screen with minimal disturbance to the water in the well casing. Water purged from each well was monitored for various field parameters including temperature, pH, turbidity, electrical conductivity, dissolved oxygen (DO), and oxidation reduction potential (ORP) using a YSI™ multi-parameter meter equipped with a flow-through cell. Purging continued until temperature, pH, and conductivity had stabilized. Measured field parameters are listed in **Table 1**. Copies of the groundwater purge logs are provided in **Appendix A**.

Groundwater samples were collected from 11 of the 12 monitoring wells for laboratory analysis. Groundwater samples from Wells MW-12 and MW-14 were collected with a disposable bailer following well purging. Groundwater samples from Wells MW-1, MW-2, MW-6, MW-9, MW-10, MW-19R, MW-21R, MW-22 and MW-23 were collected from the discharge tubing of the well pump following well purging. The submersible well pump was cleaned prior to use and between wells by washing in a solution of Liquinox, rinsing with tap water, final rinsing with deionized water, and air drying. New disposable, polyethylene discharge tubing was attached to the pump following each decontamination procedure and was changed between each well. Duplicate samples were collected from Wells MW-2 and MW-9, and labeled DUP-2 and DUP-1, respectively. One equipment blank, labeled EB-180315, was collected by pumping deionized water through the utilized pump and clean, disposable, polyethylene tubing into sample containers following decontamination procedures. A trip blank sample, labeled TB-180315, was prepared by the analytical laboratory and remained in the cooler during sample collection and transport. The trip blank was placed on hold pending the results of the field samples.

Sample containers and handling procedures conformed to the established protocols for each specific parameter as described in USEPA SW-846. The sample bottles, once filled and preserved as required, were labeled with the following: well identification number, sample number, date and time sampled, job number, Site/client name and location, and sampling personnel's initials. The sealed and labeled samples were placed in a cooler containing ice, and transported to Eurofins (Calscience) for analysis. The temperature of the cooler was recorded by the laboratory upon sample receipt and was within acceptable range. The chain-of-custody (COC) was maintained throughout the sampling program. A copy of the COC record is included in **Appendix B** with the groundwater sampling laboratory report.

4.1.3 Well Head Maintenance

As part of the semi-annual monitoring program, each well head is inspected to ensure that wells are properly sealed and secured. The routine well maintenance associated with the semi-annual groundwater sampling consists of the following: inspection of water-tight well caps and locks on all monitoring wells and replacement as necessary; replacement of missing or damaged bolts on well box covers; and removal and replacement of damaged well boxes and associated concrete aprons. Several tabs on the vault boxes for Wells (MW-6, and MW-12) were re-tapped and one bolt was replaced for Well MW-22. The remaining monitoring wells were observed to be in good condition during this event.

4.1.4 Laboratory Analysis Program

A total of 11 primary groundwater samples and two field duplicate groundwater samples were analyzed for the following:

- TPHg and TPH as motor oil (TPHmo) by USEPA Method 8015M
- BTEX and fuel oxygenates MTBE, di-isopropyl ether (DIPE), ethanol, ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME), and tertiary butyl alcohol (TBA) by USEPA Method 8260B, and full list volatile organic compounds (VOCs).

The laboratory report is presented in **Appendix B** and the groundwater analytical results are summarized in **Table 2**.

4.2 LIMITED DATA VALIDATION

AECOM conducted a check of data completeness for the analytical laboratory results for the groundwater samples collected. Results of the data completeness check indicate that the data as qualified are considered to be useable for meeting project objectives. One sample (MW-19R) required dilution for the EPA 8260B analysis in order to quantitate detected target analytes. For these samples, there are also non-detect results with elevated reporting limits. The data user must evaluate the utility of non-detect results with elevated reporting limits.

Copies of AECOM's data validation memoranda are included as **Appendix C**.

5.0 GROUNDWATER SAMPLING RESULTS

5.1 GROUNDWATER MONITORING RESULTS

5.1.1 Groundwater Elevation and Contours

Groundwater gauging data for the current semi-annual event are summarized in Table 1, and historical groundwater gauging data are included in **Appendix D, Table D-1**.

Measured depths to water in the 12 wells gauged (screened between approximately 5 and 30 feet bgs in the Shallow Zone) ranged from 6.05 (MW-21R) to 15.93 (MW-10) feet below top of casing (btoc). Groundwater elevations in this shallow zone ranged from 29.18 (MW-19R) to 30.89 (MW-10) feet above mean sea level (msl). Groundwater elevations increased an average of 0.34 feet between the 2017 second semi-annual groundwater monitoring event and the 2018 First Semi-annual groundwater monitoring event.

The groundwater elevations for each well are presented on **Figure 3**. As noted on the figure, the groundwater table for the Shallow Zone is very flat; thus, groundwater elevation contours were not generated, and a gradient was not calculated.

5.1.2 Groundwater Analytical Results

Chemical analytical results for this reporting period are presented in **Table 2**. Historical analytical results are included in **Appendix D, Table D-2**. A copy of the laboratory report is provided as **Appendix B**.

In summary, TPHg and/or BTEX were detected above laboratory reporting limits in 7 of the 12 groundwater monitoring wells sampled. Wells MW-1, MW-9, MW-10, MW-21R located south, north, and south respectively, of the Sears Auto Center, and Well MW-21R located north of the Police Station were non-detect for all constituents. TPHmo, Ethanol, MTBE, ETBE, DIPE, and TAME were not detected in any of the wells. TBA was detected in well MW-2. Additional VOCs detected this event include: n- butylbenzene, sec-butylbenzene, tert-butylbenzene, isopropylbenzene, n-propylbenzene, naphthalene, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene.

The following is a summary of the detected compounds:

Detected Compound	Number of Detections	Minimum Detection (µg/L)	Maximum Detection (µg/L)	Well with Maximum Concentration
TPHg	7	170	13,000	MW-19R
Benzene	4	2.1	1,700	MW-22
Toluene	3	47	1,600	MW-19R
Ethylbenzene	4	1.4	3,900	MW-19R
Xylenes	4	1.5	12,600	MW-19R
TBA	1	18	18	MW-2
n-butylbenzene	4	11	30	MW-19R
Sec-butylbenzene	3	2.2	8.1	MW-2
Tert-butylbenzene	5	4.0	26	MW-2
Isopropylbenzene	5	4.9	120	MW-19R
n-propylbenzene	5	2.9	280	MW-19R
Naphthalene	3	56	390	MW-19R
1,2,4-trimethylbenzene	3	24	1,900	MW-19R

Detected Compound	Number of Detections	Minimum Detection (µg/L)	Maximum Detection (µg/L)	Well with Maximum Concentration
1,3,5-trimethylbenzene	2	260	460	MW-19R

µg/L – micrograms per liter

Based on results of the analyses, isoconcentration contour maps for dissolved-phase TPHg and benzene in groundwater are provided as **Figures 4** and **5**, respectively. As indicated on the figures, the highest concentrations are centered around Wells MW-13, MW-19R, MW-22, and MW-23, the area of the DPE pilot test (AECOM, 2015). This is near Anomaly E and the Police Station in the general location of the former UST that appeared to be associated with the former racetrack. The benzene plume (greater than 10 µg/L) appears to be limited to an area roughly 250 feet in length (**Figure 5**). The smaller area of impact (maximum benzene concentration of 17 µg/L) detected during the second semi-annual 2017 event is no longer present at Well MW-2 in the vicinity of the former oil tanks for the Sears Auto Center.

A dual-phase extraction pilot test was conducted in the area of Anomaly E in April 2015. The results from this test show a relatively low benzene mass removal rate (i.e., one pound removed at a rate of 0.2 lb/day), a declining removal rate from the peak at the start of the test to the end (i.e., 37% lower), up to 50% reduction in benzene concentrations in soil vapor, and up to 75% reduction in benzene concentrations in the area with the highest benzene concentrations in groundwater. These reductions indicate that additional direct benzene mass removal would likely have limited effect on Site conditions. To assess whether conditions would change (i.e. rebound) after the DPE event, AECOM recommended one additional round of groundwater monitoring be conducted in September 2015 to evaluate the potential post-DPE rebound in current Site conditions and to determine the need for future remediation (i.e., another round of DPE), if any. In their letter dated August 20, 2015, GPP concurred with the recommendation to collect post-DPE groundwater samples to evaluate dissolved-phase concentrations in the suspected source area.

Groundwater data from the April and September 2015 through March 2018 sampling events in the plume area around MW-19R are summarized below.

Groundwater Monitoring Well ID	April 2015 Benzene (µg/L)	Sept. 2015 Benzene (µg/L)	March 2016 Benzene (µg/L)	Sept. 2016 Benzene (µg/L)	March 2017 Benzene (µg/L)	Sept. 2017 Benzene (µg/L)	March 2018 Benzene (µg/L)	Reduction/Increase in Benzene Concentration since April 2015
MW-13[(1)]	9,000	--	--	--	--	4,300	--	
MW-19R	4,050	3,740	5,520	2,760	1,900	1,900	1,600	**Decrease** 60.5%
MW-22	1,790	975	758	2,160	820	1,900	1,700	**Decrease** 5.0%
MW-23	616	157	484	756	1,100	960	520	**Decrease** 15.6%
LTCP Scenario 2								3000 ug/L

(1) Well not sampled due to the presents of a sheen

Groundwater data from the March 2018 sampling event were compared to the appropriate State Water Resources Control Board's Low-Threat Underground Storage Tank Case Closure Policy (LTCP) screening results to evaluate the effectiveness of the DPE mass removal and determine the readiness of the Site for closure. The benzene concentrations in Well MW-23 have decreased from the previous sampling event from 960 µg/L to 520 µg/L; Well MW-22 decreased from 1,900 to 1,700 µg/L which is below the 3,000 µg/L criteria for benzene; Well MW-19R demonstrated a decrease in benzene and continues to be below the LTCP criteria (Groundwater-Specific Criteria

Scenario 2) at 1,600 µg/L. LNAPL sheen was detected in Well MW-13, therefore benzene concentration likely exceed the LTCP criteria (Groundwater-Specific Criteria Scenario 2). Therefore, the Site does not currently meet the characteristics of LTCP groundwater-specific criteria Scenarios. Based on the results from Well MW-19R, MW-22, and MW-23, it appears that benzene concentrations may be stabilizing. Therefore, AECOM is currently working with Sears for additional remedial activities to obtain Low-Treat Closure.

6.0 WASTE MANAGEMENT

Liquid wastes (decontamination water and well purge water) were collected and stored in 55-gallon U.S. Department of Transportation (DOT)-approved drums. AECOM generated one drum during the 2018 First Semi-annual groundwater monitoring event. The drum was labeled to identify the source of the waste. The drum was picked up from the site and properly disposed of by a licensed waste transporter.

7.0 DISCUSSION

Based on the results of the groundwater monitoring event conducted in March 2018, AECOM concludes the following for the Sears Automotive Service Center (No. 1478) located at 1178 El Camino Real in San Bruno, California:

- Groundwater elevations in the Shallow Zone ranged from 29.18 (MW-19R) to 30.83 (MW-10) feet msl in March 2018. The groundwater elevations increased by an average of 0.34 feet from the last monitoring event in September 2017. The Shallow Zone groundwater table across the Site is very flat; thus, groundwater elevation contours were not generated and a gradient was not calculated.
- During the March 2018 monitoring event, the highest concentrations of TPHg (maximum of 13,000 µg/L in Well MW-19R) and benzene (maximum of 1,700 µg/L in Well MW-22) in the Shallow Zone are centered around Wells MW-13, MW-19R, MW-22, and MW-23, near Anomaly E and the Police Station. The historically highest TPHg concentration in Well MW-19R (70,000 µg/L) during the September 2016 monitoring event was higher than that detected during the previous sampling events and greater than five times the current sampling event. The TPHg concentrations for Wells MW-22 and MW-23 during this event were less than the September 2017 event. These subsurface impacts do not originate from the former USTs associated with the Sears Auto Center, but with a former UST associated with the former racetrack.
- MTBE was not detected above the laboratory reporting limits in the 11 groundwater monitoring wells sampled.
- The benzene plume near the Police Station is roughly 250 feet in length, with a maximum concentration of 1,700 µg/L in Well MW-22 and trace LNAPL in Well MW-13.

A dual-phase extraction pilot test was conducted in April 2015. AECOM recommended one additional round of groundwater monitoring to evaluate the potential post-DPE rebound in current Site conditions. In addition, AECOM recommended another round of DPE to further remediate the area around Anomaly E, but are currently waiting for financial commitment from BART prior to conducting the DPE activities. Groundwater data from this March 2018 sampling event were compared to the appropriate State Water Resources Control Board's LTCP screening results to evaluate the effectiveness of the DPE mass removal and determine the readiness of the Site for closure. The Site does not currently meet the characteristics of the LTCP groundwater-specific criteria scenarios, due to LNAPL in Well MW-13 in which benzene results likely exceed 3,000 µg/L in Wells MW-13 (4,300 µg/L). AECOM recommended another round of DPE to further remediate the area around Anomaly E to meet or exceed the LTCP groundwater-specific criteria Scenario number 2, but are currently waiting for financial commitment from BART prior to conducting the DPE activities.

8.0 SCHEDULE

The anticipated schedule for work to be conducted during the second quarter of 2018 is as follows:

- Implement the Corrective Action Plan during the Fall of 2018 (Pending financial commitment from BART)
- Conduct the second semi-annual groundwater monitoring of 12 groundwater wells in September 2018.

The RWQCB will be notified of upcoming field activities.

-o0o-

Re: Corrective Plan Implementation Report
Sears Automotive Service Center (No. 1478)
Separate Source of Hydrocarbons in the Vicinity of the San Bruno Police Station
1178 El Camino Real, San Bruno, California
SMCo Site #880008

Dear Mr. Gwinn:

AECOM is submitting the enclosed Corrective Action Plan Implementation Report for the Sears Automotive Service Center (No. 1478) located at 1178 El Camino Real, San Bruno, California. This report summarizes remediation activities for a separate source of hydrocarbons in the vicinity of the San Bruno Police Station and includes the results of groundwater sampling post remediation activities.

If you have any questions or comments, please feel free to contact Dennis Callahan at (714) 567-2724.

Sincerely,
AECOM

Dennis Callahan, PE
Project Engineer

Corrective Action Plan Implementation Report

Sears Automotive Service Center (No. 1478)
1178 El Camino Real
San Bruno, California

This Corrective Action Plan (CAP) Implementation Report for the Sears Automotive Service Center (No. 1478) in San Bruno, California was prepared by AECOM (formerly URS Corporation) on behalf of the Bay Area Rapid Transit (BART) in a manner consistent with the level of care and skill ordinarily exercised by professional engineers, geologists, and environmental scientists. This report was prepared under the technical direction of the undersigned.

1.0 INTRODUCTION

On behalf of the Bay Area Rapid Transit (BART), AECOM prepared this *Corrective Action Plan (CAP) Implementation Report* for the Sears Automotive Service Center (No. 1478) located at 1178 El Camino Real in San Bruno, California (Site, **Figure 1**). This report summarizes the dual-phase extraction (DPE) activities conducted at the Sears Automotive Service Center (No. 1478), adjacent to the San Bruno Police Station and Bay Area Rapid Transit (BART) Station (San Mateo County Assessor's Parcel Number [APN] 014-316-330). The remediation activities were conducted in the general area around Anomaly E, where elevated concentrations of petroleum hydrocarbon mass have been detected. A Site plan showing the area is provided as **Figure 2**.

Work activities were completed per AECOM's *Corrective Action Plan* (CAP) dated June 22, 2017 (AECOM, 2017a) and Memorandum to Jacob Madden, San Mateo County Groundwater Protection Program (GPP) dated August 17, 2017 (AECOM, 2017b, **Appendix A**). As proposed in the CAP, a 30-day DPE event was selected as the remedial approach to best achieve the remedial action objectives (ROA) and cleanup criteria per California State Water Resources Control Board (SWRCB) Low-Threat Underground Storage Tank Case Closure Policy (LTCP).

The remediation objectives outlined in the CAP for the Anomaly E area are as follows:

- Remove residual petroleum hydrocarbons in the subsurface soil to the maximum extent practical;
- Remove residual LNAPL in the subsurface soil to the maximum extent practical and
- Reduce dissolved benzene concentrations in onsite source area monitoring wells to achieve low-threat closure criteria (< 1,000 ug/L).

In addition to DPE activities summarized herein, this report also summarizes the results of post remediation groundwater sampling conducted from groundwater monitoring wells within the area. The results of the groundwater sampling showed the remediation of the area was successful in achieving remediation objectives.

2.0 SITE BACKGROUND

A comprehensive summary of the site history, previous investigations and the nature and extent of petroleum hydrocarbons was presented in the CAP (AECOM, 2017a). The Site is bounded by Sneath Lane and a shopping center to the north, residential and commercial properties to the east, the Shops at Tanforan to the south, and El Camino Real and commercial stores to the west. As shown on Figure 2, the Sears Auto Center is located in the northeast corner of the Tanforan Mall complex, situated between Sneath Lane to the north, Century Theaters to the south, and the San Bruno BART train station, entrance plaza, BART parking structure, and San Bruno Police Station to the east.

2.1 SITE HISTORY

Records show that as early as 1925, the Site was the location of the Tanforan Horse Racing Track which, in 1942, was used as a Relocation Center for Bay Area persons of Japanese ancestry. During the 1950s, the Site returned to use as a race track which maintained an "oil/gas corporation yard" near what is now the San Bruno Police Station. Aerial photos show that in 1965, the Site was the location of a golf course which occupied the central area of the track oval. The Tanforan shopping mall was constructed in 1969. The San Bruno BART station, BART parking structure, and San Bruno Police Station were constructed between 2000 and 2003, and the Century Theater/parking structure was built in 2006 and 2007 (SCS Engineers, 2013).

In February 2001, a BART subcontractor uncovered a 100-gallon underground storage tank (UST) at a depth of approximately 16 feet below ground surface (bgs) during excavation for the police station, near the southwest corner of the BART construction zone, over 300 feet from the former gasoline and oil UST areas associated with the Sears Auto Center. According to this subcontractor, the UST was old, had numerous rusted holes in the bottom, and the soil adjacent to it was "dark", with a "strong odor like gasoline or diesel." The UST was removed by a BART subcontractor. Field notes completed by BART's environmental consultant indicate that a sheen was present on the groundwater in the vicinity of the UST (BART, 2010). The tank appeared to be located near the southern corner of the San Bruno Police Station, which is the general area where the petroleum hydrocarbon mass associated with Anomaly E is located. The old 100-gallon UST was most likely associated with the former racetrack oil/gas yard.

2.2 GEOLOGY AND HYDROGEOLOGY

2.2.1 Regional Geology and Hydrogeology

The Site is located on the eastern flatlands of San Francisco Peninsula bordering San Francisco Bay at an elevation of approximately 40 feet above mean sea level (MSL). Local topography slopes gently northeast toward San Francisco Bay. The near-surface geology in the area of the Site has largely been controlled by the changing morphology of the Bay Area over recent geologic time. Bedrock in the area is comprised of Jurassic-Age Franciscan Assemblage, which may be observed in outcrops in the hills surrounding the area to the north, south, and west. Typically, the top of bedrock occurs at depths from about 500 feet to 600 feet bgs in this general area. Overlying the bedrock are the Merced and Colma Formations, a series of Quaternary-Age alluvial and marine deposits (U.S. Geological Survey [USGS], 1983 and Burns & McDonnell, 2005).

The nearest surface water body is an unnamed tidal slough located approximately 0.5 miles northeast of the Site, that drains to Colma Creek and then to the San Francisco Bay.

2.2.2 Site Geology and Hydrogeology

The Site is immediately underlain by both fine- and coarse-grained sediments. Gravelly and sandy fill is locally present just below asphalt to approximately 3 to 5 feet bgs. The fill is underlain by clay/silt to a depth of approximately 12 to 15 feet bgs. The clay/silt unit is underlain by a laterally continuous silty sand to sand, with local gravel lenses, from approximately 15 to at least 50 feet bgs (Burns & McDonnell, 2005).

Based on drilling observations, the first encountered water-bearing zone beneath the Site (Shallow Zone) occurs in the sand described above and appears to be under confined to semi-confined conditions. For example, during the drilling of Wells MW-19 and MW-21, first groundwater was logged at depths of 18 to 20 feet bgs but rose to depths ranging from approximately 6 to 12 feet bgs in subsequent measurements after the wells were installed. The Shallow Zone groundwater flow direction has historically been toward the northeast. Shallow groundwater gradients at the Site have been relatively flat varying between less than 0.01 and 0.05 foot/foot (SCS Engineers, 2013). The Deep Zone groundwater generally flows in a north to north-northeasterly direction. Groundwater gradients in the Deep Zone at the Site have varied between 0.03 and 0.04 foot/foot (SCS Engineers, 2013).

2.2.3 Groundwater Supply Wells

Per the California Regional Water Quality Control Board, San Francisco Bay Region's (SFBRWQCB) *Water Quality Control Plan* (SFBRWQCB, 2015), existing and potential beneficial uses for groundwater in the Site vicinity include municipal, industrial, and agricultural. As discussed in AECOM's CAP (AECOM, 2017a), no water supply wells are located within 1,000 feet of the Site. The nearest well is located roughly 1,800 south of the Site and is reported to be a monitoring well for the City of San Bruno.

2.3 PREVIOUS INVESTIGATIONS

The nature and extent of petroleum constituents in soil and groundwater at the Site have been evaluated through a series of investigations starting with the UST removals at the nearby Sears Auto Center in 1985. Initial investigative activities focused on potential subsurface impacts from the USTs operated by Sears. Later investigations and a DPE pilot test were performed in the vicinity of the San Bruno Police Station around the general area where the 100-gallon UST was discovered at the location of Anomaly E (Figure 2). A detailed summary of previous investigations and AECOM's 2015 DPE pilot study are detailed in the CAP (AECOM, 2017a).

In preparation of this DPE event, extraction wells DPE-1, DPE-2, and DPE-3 were installed during October 2017 to provide additional wells to remove the hydrocarbon source within the Anomaly E area (AECOM, 2017c).

3.0 DUEL PHASE EXTRACTION

3.1 DPE ACTIVITIES

DPE activities were planned based on the results of the 2015 DPE Pilot Test described in the CAP (AECOM, 2017a). DPE operation at the Site were conducted from August 22, 2019 to September 24, 2019 using wells MW-19R, MW-22, MW-23, DPE-1, DPE-2, and DPE-3 for extraction (**Figure 2**).

Equipment for the DPE event consisted of a truck-mounted, low-noise, high-vacuum liquid ring pump system supplied by CalClean, Inc. based in Tustin, California. This technology allows for the simultaneous extraction of volatile organic compounds (VOCs) from the vadose zone, capillary fringe, and saturated soil zone. During operation, extracted vapor and groundwater are separated in a high-vacuum-rated knockout tank. Extracted soil vapor was treated using a thermal oxidizer and discharged to the atmosphere in accordance with the Bay Area Air Quality Management District (BAAQMD) Permit to Operate (Plant No. 12568). Extracted groundwater was treated by a series of two 500-pound (lb) liquid-phase granular activated carbon (GAC) adsorbers and discharged to the sanitary sewer system per the Cities of South San Francisco-San Bruno General/Groundwater Discharge Permit Number GW-19-P-09. Copies of the air and wastewater permits are included in **Appendix B**.

Other equipment included a handheld manometer or magnehelic gauges for measuring residual vacuum at various observation wells, a water level meter (or interface probe) for measuring groundwater drawdown at the extraction and observation wells, and an organic vapor analyzer (OVA) for measuring hydrocarbon concentrations in extracted vapor.

During DPE operation, daily site visits were conducted to monitor and record system data and to collect vapor samples for laboratory analyses. Data recorded include:

- Hours system operated;
- System flow rate;
- Temperature;
- Volatile organic compounds (VOCs) vapor concentrations measured with a photoionization detector (PID) for total system influent and individual extraction wells;
- Vacuum readings (system, DPE, well casing, and extraction hose); and
- Total volume of extracted groundwater.

The vapor samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg) by EPA Method TO-3(M), VOCs by EPA Method TO-15(M) and fixed gases including oxygen, carbon dioxide, and methane by ASTM D1946.

Prior to initiating the discharge to the sewer system, one water sample, Discharge-1, was collected from the groundwater treatment system after the GAC adsorbers and analyzed for constituents listed on the General/Groundwater Discharge Permit Number GW-19-P-09.

Laboratory and DPE data for the event are summarized in **Table 1** and **Table 2**, respectively. Petroleum hydrocarbon and benzene mass removal calculations are summarized in **Table 3**. DPE field data sheets are included as **Appendix C**. Copies of the laboratory reports and chain-of-custody records are included as **Appendix D**. The results of the DPE event are summarized below:

- Vapor concentrations ranged from 220 to 1,300 parts per million (ppmv) TPHg and 1.3 to 5.3 ppmv benzene in total system influent samples.
- The average system influent vapor TPHg concentration was 742 ppmv.
- The average system influent vapor benzene concentration was 3.2 ppmv.
- Approximately 140,570 gallons of water were removed during the event (approximately 3.6 gallons per minute [gpm]). The water was temporarily stored in a poly tank before onsite treatment and discharge per the treated water discharge permit.
- The average system flow rate averaged 105 standard cubic feet per minute (scfm).
- The applied system vacuum averaged approximately 13.5 inches of mercury (inHg).
- The average inlet VOC concentration measured in the field was 962 ppmv.
- VOC mass removal rates measured in the field averaged 1.4 lbs/hr or 33 lbs/day.
- Field data calculations estimated a total VOC mass removal of 878.5 lbs.
- Laboratory results indicate that 950.3 lbs of TPHg and 3.3 lbs of benzene were removed via vapor extraction during the event.

Figure 3 shows concentrations and cumulative VOC mass removed, **Figure 4** shows individual well VOC concentrations, and **Figure 5** shows depth to water measurements for the duration of the DPE event.

4.0 POST REMEDIATION GROUNDWATER SAMPLING

Following the DPE activities, groundwater samples were collected from wells MW-19R, MW-22, and MW-23 on December 6, 2019. These groundwater monitoring wells are located within the targeted remediation area. A description of the monitoring methods is presented below.

4.1.1 Groundwater Gauging

Prior to purging and sampling, water levels were gauged to the nearest 0.01 foot using a Solinst electronic interface probe. The depth to water was measured relative to the surveyed top of well casing. Water level measurements were recorded on a gauging log.

4.1.2 Purging and Sampling Methods

After gauging, the wells were purged and sampled using low-flow/low-stress procedures (U.S. Environmental Protection Agency [USEPA]/540/S-95/504, April 1996). Low-flow purging was conducted to minimize the impact of the purging process on groundwater chemistry during sample collection, and to minimize the volume of water purged and disposed.

Water quality indicator parameters were used to determine purging needs prior to sample collection in each well. The goal was to minimize drawdown where possible, with frequent monitoring of water quality parameters. Water purged from each well was monitored for various field parameters including temperature, pH, turbidity, electrical conductivity, dissolved oxygen (DO), and oxidation reduction potential (ORP) using a YSI™ multi-parameter meter equipped with a flow-through cell. Purging continued until temperature, pH, and conductivity had stabilized. Copies of the groundwater sample logs are provided in **Appendix E**.

Groundwater samples were collected from the discharge tubing of the well pump following well purging. The submersible well pump was cleaned prior to use and between wells by washing in a solution of Liquinox, rinsing with tap water, final rinsing with deionized water, and air drying. New disposable, polyethylene discharge tubing was attached to the pump following each decontamination procedure and was changed between each well. A duplicate sample was collected labeled DUP-1. One equipment blank, labeled EB-191206, was collected by pumping deionized water through the utilized pump and clean, disposable, polyethylene tubing into sample containers following decontamination procedures. A trip blank sample, labeled TB-191206, was prepared by the analytical laboratory and remained in the cooler during sample collection and transport. The trip blank was placed on hold pending the results of the field samples.

Sample containers and handling procedures conformed to the established protocols for each specific parameter as described in USEPA SW-846. The sample bottles, once filled and preserved as required, were labeled with the following: well identification number, sample number, date and time sampled, job number, Site/client name and location, and sampling personnel's initials. The sealed and labeled samples were placed in a cooler containing ice and transported to Eurofins (Calscience) for analysis. The temperature of the cooler was recorded by the laboratory upon sample receipt and was within acceptable range. The chain-of-custody (COC) was maintained throughout the sampling program. A copy of the COC record is included in **Appendix F** with the groundwater sampling laboratory report.

Groundwater samples were analyzed for the following:

- TPHg and TPH as motor oil (TPHmo) by USEPA Method 8015M
- BTEX and fuel oxygenates MTBE, di-isopropyl ether (DIPE), ethanol, ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME), and tertiary butyl alcohol (TBA) by USEPA Method 8260B, and full list volatile organic compounds (VOCs).

5.0 POST REMEDIATION GROUNDWATER SAMPLING RESULTS

5.1 GROUNDWATER MONITORING RESULTS

5.1.1 Groundwater Analytical Results

Laboratory results of groundwater samples are summarized in **Table 4** and per the following:

Groundwater Monitoring Well ID	TPHg (µg/L)	Benzene (µg/L)	Ethylbenzene (µg/L)	Toluene (µg/L)	Xylenes (µg/L)	MTBE (µg/L)
MW-19R	1,300	40	250	3.5	105	Non-detect
MW-22	2,400	46	140	3.2	410	Non-detect
MW-23	3,800	170	850	21	312	Non-detect

LTCP Scenario 2: Benzene less than 1,000 µg/L.

Groundwater data were compared to the appropriate State Water Resources Control Board's Low-Threat Underground Storage Tank Case Closure Policy (LTCP) screening results to evaluate the effectiveness of the DPE mass removal and determine the readiness of the Site for closure. Significant reductions in dissolved-phase petroleum hydrocarbon concentrations from previous/pre-remediation values, specifically benzene, were observed in all three wells. The benzene concentrations are all well below the LTCP criteria (Groundwater-Specific Criteria Scenario 2). In addition, no LNAPL sheen was detected in Well MW-13.

6.0 CONCLUSIONS AND RECOMMENDATIONS

AECOM concludes that the remedial objectives for low-threat closure have been achieved for the Sears Automotive Service Center (No. 1478) located at 1178 El Camino Real in San Bruno, California, based on the results of DPE event conducted in August and September 2019 and confirmed by the groundwater sampling event completed in December 2019.

The post-treatment groundwater monitoring event conducted in December 2019 confirmed that the remedial objects outlined in the CAP have been met. No LNAPL or sheen was observed in any of the monitoring wells sampled. Benzene concentrations in the source area groundwater have reduced to less than 200 µg/L, well below the target low-threat closure criteria of 1,000 µg/L. AECOM recommends the Site be evaluated for LTCP closure.

7.0 LIMITATIONS

The conclusions presented in this report are professional opinions based solely upon the data described in this report. They are intended exclusively for the purpose outlined herein and the site location and project indicated. This report is for the sole use and benefit of Sears Holding Management Corporation. The scope of services performed in execution of this investigation may not be appropriate to satisfy the needs of other users, and any use or reuse of this document or the findings, conclusions, or recommendations presented herein is at the sole risk of said user.

Given that the scope of services for this investigation was limited, and that conditions may vary between the points explored, it is possible that currently unrecognized conditions may be present at the Site. Should Site use or conditions change, the information and conclusions in this report may no longer apply. Opinions relating to environmental, geologic, and geotechnical conditions are limited to data obtained from these investigations and actual conditions might vary from those encountered at the times and locations where data were obtained. No express or implied representation or warranty is included or intended in this report except that the work was performed within the limits prescribed by Sears with the customary thoroughness and competence of professionals working in the same area on similar projects.

Notes:
in. Hg = inches of mecury
scfm = standard cubic feet per minute
ppmv = parts million by volume
lb/hr = pounds per hour
lb/day = pounds per day
lbs = pounds
gal = gallons
gpm = gallons per minute

Hydrocarbon removal rate and cumulative hydrocarbon removal were calculated using the following formula:

$$\frac{\text{(average ppmv)(60 min/hr) (24 hr/day) (average scfm) (86.2 lb/lb-mole)}}{\text{(1,000,000) (379 ft}^3\text{/lb-mole)}}$$

ppmv - average hydrocarbon concentration in parts per million by volume
min/hr - minutes per hour
scfm - average vapor flow rate in standard cubic feet per minute
86.2 lb/lb-mole - pound/pound-mole: molecular weight of hexane
379 ft^3/lb-mole - cubic feet per pound-mole: ideal gas constant

Notes/Explanation:

1. Duplicate sample.

Bold text indicates results above laboratory reporting limit.

<: Analyte not detected above the reporting limit

µg/L: micrograms per liter

Z: The chromatographic response does not resemble a typical fuel pattern.

TPH - total petroleum hydrocarbons

VOCs - volatile organic compounds

TPH-g - total petroleum hydrocarbons - gasoline range organics

TPH-d - total petroleum hydrocarbons - diesel range organics

TPH-mo - total petroleum hydrocarbons - motor oil

DIPE - diisopropyl ether

ETBE - ethyl tertiary butyl ether

MTBE - methyl tertiary butyl ether

TAME - tert-amyl methyl ether

TBA - tertiary butyl alcohol

SUBJECT: SEPARATE SOURCE OF HYDROCARBONS IN THE VICINTIY OF THE SAN BRUNO POLICE STATION, SEARS AUTOMOTIVE CENTER #1478, 1178 EL CAMINO REAL, SAN BRUNO, CALIFORNIA

Dear Responsible Parties:

Thank you for the *Corrective Action Implementation Report* dated April 28, 2020 (uploaded to GeoTracker on June 9, 2021), which was submitted by AECOM for the subject site. San Mateo County Groundwater Protection Program (GPP) staff have the following comments based on review of the report and project file.

- The mobile dual-phase extraction (DPE) test operated nearly 30 days through August and September 2019. The total gasoline mass removed during the event was calculated as approximately 950 lbs. However, the mass removal rate at the end of the event remained above 10 lbs/day, and cumulative mass removed plot did not display a flattening trend. These conditions indicate that the system may have been shut-down prematurely before the secondary source was removed to the extent practicable.

- Post-DPE groundwater samples collected from wells MW-19R, MW-22, and MW-23 in December 2019 indicate that dissolved-phase benzene concentrations were reduced one to two orders of magnitude from pre-DPE levels.

- Please complete an additional post-DPE groundwater monitoring event to evaluate current plume conditions. A comprehensive groundwater monitoring event has not been performed at the site since 2018. Wells MW-2, MW-6, MW-12, MW-13, MW-14, MW-19R, MW-21R, MW-22, and MW-23 should be sampled for TPHg and BTEX. Please submit the groundwater monitoring **no later than February 15, 2022**.

If future monitoring indicates a sustained reduction in groundwater contaminant concentrations, additional secondary source reduction may not be required.

I appreciate your cooperation. This office requires a two business-day notification, preferably by email, for all fieldwork. Feel free to contact me at (650) 272-4590 or bgwinn@smcgov.org if you have any questions.

Sincerely,

Brian Gwinn, PG
Hazardous Materials Specialist
Groundwater Protection Program

1. SUMMARY OF CONCLUSIONS

Ramboll US Consulting, Inc. (Ramboll) was retained by Milbank LLP (Milbank) on behalf of CTL PropCo I LLC, a Delaware limited liability company, to perform a Phase I Environmental Site Assessment (ESA) of the J.C. Penney Company, Inc. (J.C. Penney or the "Company") property at 1122 El Camino Real in San Bruno, California (herein referred to as the "facility" or the "site"). Ramboll's assessment was conducted in connection with a potential purchase of the site.

The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the "ASTM Standard"), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard (see Section 7). The scope of work for the Phase I ESA was expanded to include a qualitative evaluation of the potential for the on-site existence of asbestos-containing materials (ACM).

1.1 Site Summary

JC Penney owns and operates a retail department store and associated parking garages and parking lots at the site in San Bruno, California. The approximately 15-acre site is improved with an approximately 223,232-square-foot building, which is connected to the rest of The Shops at Tanforan (the "shopping mall building") to the north but is situated on its own parcel of land. The building is currently used as a retail department store and included sales areas, a salon, a digital portrait studio, optical office, product storage, offices, employee areas, and restrooms. Other areas associated with the site consist of parking garages to the east and south and parking lots to the west and southeast of the site building.

The site was developed with the southern portion of the Tanforan Race Track ("Race Track") in 1899. The Race Track, was temporarily converted into a Unites States military training center from 1914 to 1918 and from 1941 to 1950, including an internment camp in 1942. The Race Track burned down in 1964, and the current site building and former automotive operations building was constructed in 1972. JC Penney has continued to operate the facility as a retail department store since that time, demolishing the automotive shop operations building in 2005.

1.2 Recognized Environmental Conditions

Ramboll performed a Phase I ESA of the site at 1122 El Camino Real in San Bruno, California in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no RECs in connection with the site.

1.3 Other Findings

Although not considered RECs, Ramboll identified the following notable other findings. The term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

- **Former USTs without Closure Documentation.** A total of five USTs were formerly located at the site in association with the former automotive shop operations and facility. Three 10,000-gallon gasoline (one premium, one unleaded, and one regular) USTs were installed in 1972 and listed as being last used in 1983. One 500-gallon waste oil tank was installed in 1972 and listed as

being active. Additionally, one 550-gallon waste oil UST with unknown installation date is also listed as being active. Facility personnel indicate there are no active USTs on site but were unaware of the closure process prior or during the demolition of the automotive operations building in 2005. It is unclear whether the tanks were removed from the ground and if leaks were discovered upon closure of the tanks, as Ramboll has not been provided with reports documenting nature of UST closure activities performed. It does not appear that any confirmatory soil or groundwater samples were collected, and no records indicate that leak detection equipment or overfill alarms were installed at the time of installation. Because Ramboll's review did not identify documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product related to this matter, it is not considered a REC; however, absent further closure or removal documentation, Ramboll cannot confirm that the subsurface was not adversely impacted from the operation of this UST. However, regulatory database search results do not identify any continuing obligations related to the closure of the USTs.

- **Past Operations at the Site.** The site has been used for various purposes since the late 1890s, including as a horse, dog, motorcycle and automotive race track (1899-1964), military training and operations (1914-1918, 1941-1950), internment camp operations (1942), automotive shop operations (1972–2005), and retail operations (1972–present). These former industrial operations may have included the use of petroleum products, solvents, adhesives, paint, metals, acids, caustics, corrosives, explosives, propellants, lead and other chemicals and a fire is known to have occurred in 1964. Additionally, historical operations conducted between site development and the early 1980s predate the enactment of robust environmental regulations related to the handling, storage, and disposal of hazardous chemicals. No subsurface characterization activities are known to have been conducted at the site. Because Ramboll's review did not identify documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product related to this matter, it is not considered a REC; however, absent further information regarding the specific nature of historical chemical use, chemical handling practices, and associated wastes, Ramboll cannot rule out the possibility that inadvertent spills or releases of chemicals or petroleum products may have occurred in the past. Facility personnel are not aware of any major spills or releases at the site and there is no current regulatory scrutiny related to contamination matters at the site. As such, Ramboll does not consider this finding a REC.
- **Potential for Migration of Contamination from Off-Site Properties.** The site is located adjacent to (500 feet south) an off-site property within the shopping mall that is listed with open status on a database indicative of potential soil or groundwater contamination. The database listing indicates petroleum hydrocarbons contamination of soil and groundwater originating from former UST operations from the Tanforan Race Track and Sears automotive shop operations. The contamination that is currently being remediated under regulatory oversight. The groundwater contamination has been delineated and based on the available information, there is no indication that contamination from the off-site property is migrating to the subject site; however, consistent with ASTM requirements, Ramboll has attempted to undertake a further review through submission of a Freedom of Information Act (FOIA) request to the state environmental agency regarding the database listings. Additionally, the site is located adjacent to (350 feet southeast) an off-site property within the shopping mall that formerly conducted dry-cleaning operations, which potentially included the use of chlorinated solvents. No spills were identified in the database reports, however Ramboll cannot rule out the potential for vapors migrating to the subject site due to an unreported spill. If contamination associated with off-site properties is found to have migrated onto the subject site, it is expected that any remedial activities would be the

responsibility of the entities named in the listing or other designated responsible party and not JC Penney. Because Ramboll's review did not identify documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product to the subject site related to this matter, it is not considered a REC.

1.4 Non-Scope Considerations

Ramboll identified the following finding that relates to non-scope considerations:

- **Asbestos-Containing Materials (ACMs).** Given the date of construction of the buildings at the site, it is possible that ACM are present in building materials. A formal asbestos survey has not been conducted at the facility. Ramboll conducted visual observations of limited areas of the buildings at the site and noted presumed asbestos-containing material (PACM) (e.g., vinyl floor tile, thermal system insulation associated with piping,) and other materials that may contain asbestos (e.g., ceiling tiles). Ramboll observed certain building materials that were damaged or deteriorating, specifically approximately 6-square-feet of abraded floor tiles were observed on the stairs leading to the mechanical penthouse.

2. INTRODUCTION

2.1 Scope of Work

Ramboll conducted a Phase I ESA of the JC Penney site in San Bruno, California. The Phase I ESA relied upon the references noted below and included the following tasks

- A visit to the site by Joel Krech of Ramboll on January 13, 2021 to observe the exterior and interior features of the site and to identify the uses and conditions specified in Sections 9.4.1 through 9.4.4.7 of the ASTM Standard. In addition, Ramboll observed the adjoining properties from the site or adjacent public thoroughfares. Photographs taken during the site visit are presented in Appendix A.
- An interview during or prior to the site visit with the following individuals (year associated with the site indicated in parentheses): Kerri Manino, General Manager (1987 - 2009), Yolanda Rodriguez, Assistant General Manager (1998) and Craig Gomez, Asset Protection Manager (2016). The aforementioned individuals are referred to herein as "facility personnel". The facility personnel interviewed by Ramboll were identified by the Company as having good knowledge of the uses and physical characteristics of the site.
- A review of information contained in federal and state environmental databases, as obtained from the sources noted below:
  - A radius report prepared by Environmental Data Resources, LLC (EDR, see Appendix B), which presents the results of searches of federal and state databases for the subject site, as well as properties near the subject site. The radius searched for each database, as well as the databases themselves, was selected in accordance with the ASTM Standard.
  - The United States Environmental Protection Agency's (USEPA's) Envirofacts database, which provides site information contained in multiple USEPA regulatory databases.
  - The California GeoTracker and EnviroStor databases, which contain contamination-related information from the State Water Resources Control Board (SWRCB) and State Department of Toxic Substances Control (DTSC), respectively.
  - The California Hazardous Waste Tracking System (HWTS), which provides information from waste manifests submitted to the DTSC.
- A review of standard historical sources (included as Appendix C) and local agency inquiries, as defined in the ASTM Standard. The following resources were reviewed:
  - Readily available historical sources (as identified in Section 4.2 of this report and included as Appendix C) to develop a history of the previous uses of the site and surrounding area.
  - Local building permit information, as obtained via EDR's Lightbox application.
  - Historical and site-specific information obtained from the San Mateo County Assessor's Office (Assessor).
  - An information request, regarding septic systems and wells, to the San Mateo County Environmental Health Services. A response had not been received at the time this report was completed.

  - An information request, regarding underground storage tanks (USTs), fires, spills, and emergency responses to the site, to the City of San Bruno Fire Department. A response had not been received at the time this report was completed.
  - An information request to the California State Water Resources Control Board – Division of Water Quality, Underground Storage Tank Program (CA UST Program) for information related to USTs at the site.
- A review of environmental documents provided to Ramboll, including hazardous waste manifests. Facility personnel reported that, to their knowledge, no Phase I ESAs or Phase II site investigations, or similar investigations have previously been conducted for the site.
- A review of physical setting sources, as defined in the ASTM Standard, including:
  - The current United States Geological Survey (USGS) 7.5-minute topographic map that shows the area on which the site is located.
  - Geologic, hydrogeologic, or hydrologic sources as provided in the environmental database report.
- A review of any information provided by the user of this assessment, including information consistent with Appendix X3 of the ASTM Standard. Pertinent information, if any, is discussed in the appropriate sections of this report.

This assessment was conducted in accordance with the methodology specified in ASTM Standard E1527-13, as agreed upon by Ramboll and Milbank in October 2020.

2.2 Significant Assumptions

In conducting this review, no significant assumptions were made, except for the following:

- Site-specific field measurements or other detailed hydrogeological information was not publicly available or reasonably ascertainable. In the absence of such data, Ramboll has assumed that the flow direction of shallow groundwater beneath the site and in the local vicinity generally mimics surface topography. Therefore, in evaluating potential on-site impacts from off-site sources, those off-site facilities not located adjacent to or within one-quarter mile upgradient of the subject site are not considered to represent a significant concern to the subject site. This interpretation is based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, although a hazardous material can migrate in the groundwater in a generally downgradient direction. There are, however, limits to this interpretation.

2.3 Reliance and General Limitations

This report has been prepared for the exclusive use of CTL PropCo I LLC, a Delaware limited liability company, and may not be relied upon by any other person or entity without Ramboll's prior express written permission.

This report is considered current only for a period of 180 days from the site inspection. The conclusions presented in this report represent Ramboll's best professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll must rely upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, the conclusions in this report are valid only to

the extent that the information provided to Ramboll was accurate and complete. This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility compliance. Ramboll makes no representations or warranties, expressed or implied, about the conditions of the site.

Ramboll's scope of work for this assignment did not include collecting samples of any environmental media. As such, this review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll's review; however, this report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

The scope of work for this assessment did not include an asbestos survey or inspection. According to federal OSHA regulations (29 CFR §1910.1001) and the Model Accreditation Plan (MAP; 40 CFR Part 763, Subpart E, Appendix C), the inspection, testing, evaluation, and/or sampling of suspect asbestos-containing materials must be conducted by an accredited inspector; these activities were not performed as part of this environmental review. Comments in this report regarding the condition of building materials at the site, including presumed or suspect ACM, represent only Ramboll's observations at the time of the site visit and are not intended to be consistent with definitions regarding ACM condition in the Asbestos Hazard Emergency Response Act (AHERA) or in other federal or state asbestos regulations or industry standards.

Other issues considered outside the scope of the ASTM Standard and this review include radon, lead-based paint, lead in drinking water, flooding, wetlands, PCBs in building materials, cultural and historic resources, ecological resources, endangered species, fire safety, and high voltage power lines.

3. SITE DESCRIPTION

3.1 Site Setting

JC Penney owns and operates a retail department store and associated parking garages and parking lots located at 1122 El Camino Real in San Bruno, California (the "site" or the "facility"). The site is located approximately ten miles south of San Francisco, California (Figure 1).

According to the Assessor's Office, the assessor's parcel number (APN) for the site is 014-316-300.

The approximately 15-acre site is developed with an approximately 223,232-square-foot two-story building, which is located in the northern portion of the site. The JC Penney store is connected to the rest of The Shops at Tanforan (the "shopping mall building") to the north but is situated on its own parcel of land (the "property"). The remaining areas of The Shops at Tanforan (the "shopping mall building") are operated by various entities as restaurants and retailers (i.e., apparel, homeware, jewelry, electronics, beauty, children's toys), beauty salons. A review of the operations of the other tenants of the shopping mall building was not included in Ramboll's scope of work. The building is currently used as a retail department store and included sales areas, a salon, a digital portrait studio, optical office, product storage, offices, employee areas, and restrooms. Other areas associated with the site consist of parking garages to the east and south and parking lots to the west and southeast of the site building.

The site is accessed primarily from El Camino Real at the western site boundary and Huntington Avenue at the eastern site boundary. Customer and employee parking areas are present to the east, south, and west of the building, and delivery truck access to a loading dock is provided to the south of the building. There are no on-site surface water bodies.

Table 1 provides an overview of physical setting and utility information for the site.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map; Google Earth	Ranges from approximately 42 feet near the northeastern corner to 68 feet along the northwestern corner of the site.
Topographic Gradient	USGS topographic map; visual observations	Relatively flat on-site, with a gentle downward slope to the east/northeast. Regional topography slopes gently downward to the east.

Table 1: Physical Setting and Utility Information		
Conditions	**Source**	**Description**
Local Land Use	Visual observations	The facility is located in a mixed residential/commercial land use area. North: The Shops at Tanforan, of which the site is a part, followed by Sneath Lane. East: Huntington Avenue, followed by a residential area. South: Highway 380, followed by a residential area. West: El Camino Real. A mixed residential and commercial area is located across El Camino Real. Ramboll did not observe any conditions on adjacent properties that represent a potential contamination concern to the subject site.
Nearest Residence	Visual observations	Approximately 600 feet east of the site.
Hydrology		
Storm Water Runoff	Visual observations	Enters catch basins that discharge to the municipal storm sewer system.
Nearest Surface Water Body to the Site	USGS topographic map; Visual observations	San Bruno Canal, located approximately 3,300 feet to the northeast at its nearest point. The Canal ultimately discharges to the San Francisco Bay, located approximately 1.5 miles to the east of the site.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map	Based on the topographic gradient, shallow groundwater likely flows to the east/northeast.
Depth to Groundwater	Not readily available	Information not readily available.
On-site Wells	Facility personnel; Visual observations	No production or monitoring wells.
Nearest Groundwater Supply Wells	Database report	One federally registered well, which is registered as a public supply well, is present 2,500 feet southeast of the site. Approximately four private or municipal wells that may be used for water supply are located within one mile south and west of the site.
Geologic Conditions	NCSS*	Regional soils are urban land with very slow infiltration rates.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Site Utility Information		
Heating and Cooling Equipment	Facility personnel	Natural-gas fired heating units supply building heat. The building is cooled with air conditioning units.
Natural Gas Service	Facility personnel	The site is provided with natural gas service.
Use of Fuel Oil for Building Heat	Facility personnel	No known current or former use of fuel oil for building heat.
Foam-based Fire Suppression System	Facility personnel	According to facility personnel, the site is not equipped with a built-in foam-based fire suppression system.
Water Supply	Facility personnel; City Website	The facility receives drinking water from the City of San Bruno water system.
Sanitary Sewer	Facility personnel	The facility discharges wastewater to the municipal sanitary sewer system.
Septic Systems	Facility personnel	No identified current or former septic systems.

Notes:

FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey; NWI = National Wetlands Inventory

* - Source was provided in the environmental database report.

During the site visit, Ramboll walked or drove by the borders of the properties that are adjacent to the subject site. Ramboll did not enter the neighboring properties.

3.2 Current Use of Property

3.2.1 Current Operations

JC Penney currently operates a retail department store at the site, which includes the storage and sale of primarily clothing and housewares. Ancillary operations at the facility include administrative activities, shipping, receiving, and building maintenance. With the exception of small quantities of maintenance-related chemicals, janitorial supplies, and haircare products used in the salon, the facility does not maintain any chemicals or petroleum products.

3.2.2 Waste Management

Hazardous wastes generated at the site include characteristically hazardous wastes such as flammable liquids (e.g., fragrances, non-aerosol hair spray), corrosive/acidic materials (e.g., Lysol, Windex), oxidizing materials (e.g., bleach, hydrogen peroxide), and other chemicals (e.g., paints, adhesives). Universal wastes generated on-site include light bulbs/fluorescent light tubes, aerosols, and electronic

wastes. On-site hazardous and universal wastes are hauled off-site by Heritage Environmental Services.

Nonhazardous waste generated at the site consists of general trash and recyclable wastes from general employee operations which are accumulated in a trash compactor positioned outdoors in the loading/unloading area near the southern portion of the building; the trash compactor wastes are hauled off-site by Hazi Waste Services. The recyclable wastes are collected in a cardboard baler, before they are hauled off-site to a central JC Penney warehouse for recycling.

3.2.3 Wastewater and Storm Water

Sanitary wastewater from bathroom areas (including floor drains) and the hair salon is discharged to the municipal sanitary sewer system. The facility does not generate process wastewater. Storm water at the site enters storm drains in paved areas of the site. These storm drains discharge the storm water to the municipal storm sewer system located on unnamed mall access road.

3.2.4 Air Emissions

Air emissions from the facility are limited to combustion products resulting from the operation of the site's natural-gas-fired comfort heating system and occasional use of one diesel powered emergency backup generator, which provides power for emergency exit lighting.

4. REVIEW OF PUBLIC RECORDS AND OTHER INFORMATION SOURCES

4.1 Environmental Regulatory Database Review

Ramboll contracted with EDR in October 2020 to prepare of summary of listings in federal and state agency databases for the site and facilities within applicable radii of the property, as specified by the ASTM standard.[1] A copy of the environmental database search report is presented in Appendix B.

4.1.1 Database Review for Site

Ramboll reviewed the results of the state and federal environmental database searches performed by a third-party database provider (see Appendix B) and also searched the California Geotracker, Envirostor, and HWTS databases. The site is listed on several environmental databases, as discussed in Table 2.

Table 2: Summary of Environmental Database Listings for the Site

Summary of Information Contained in Database	Ramboll's Comments
JC Penney Store #1959 is listed in the Resource Conservation and Recovery Act (RCRA) database as a non-generator of hazardous waste. The site is also listed on the San Mateo County Business Inventory (San Mateo Co. BI), California Environmental Reporting System (CERS), CERS Hazardous Waste (CERS HAZ WASTE), Hazardous Waste Tracking System (HWTS), and Facility and Manifest Data (HAZNET) databases as a generator of asbestos-containing waste, aged or surplus organics, unspecified solvent mixtures, other inorganic solid waste, and laboratory waste chemicals. No current violations or issues of noncompliance are identified. The CERS database lists numerous historical violations, which appear to have been resolved.	The listings do not suggest a contamination concern to the site. Wastes generated at the site are further discussed in Section 3.2.2.
Firestone 36F3 is listed at the site address as a gas station in the Historical UST (HIST UST) database for four USTs installed in 1972, including three 10,000-gallon tanks (one premium, one unleaded, and one regular, all of which were last used in 1983) and one 500-gallon waste oil tank. JC Penney is also listed in the HIST UST database for the same 500-gallon waste oil tank.	Ramboll submitted an information request to the CA UST Program regarding these tanks. According to documents received from the Program, the 500-gallon UST is currently in use and the Program had no records of UST removal information or aware of any cleanup activities at the site. According to facility personnel, there are no active USTs on site but are unaware of the closure process during the demolition of the Firestone in 2005. This matter is further discussed in Section 6.

[1] EDR uses the term "radii" to refer to the ASTM terminology "approximate minimum search distance" in the environmental database report.

Table 2: Summary of Environmental Database Listings for the Site	
Summary of Information Contained in Database	**Ramboll's Comments**
Firestone listed at 1110 El Camino Real is listed in the HIST UST, Statewide Environmental Evaluation and Planning System UST (SWEEPS UST), California Facility Inventory Database UST (CA FID UST), and San Mateo Co. Business Inventory (San Mateo Co. BI) databases for one active 550-gallon waste oil UST.	The listing indicates a different address than the Firestone 36F3 above, however facility personnel indicate there was only one firestone in the area, which was located on the site property. According to facility personnel, there are no active USTs on site but are unaware of the closure process during the demolition of the Firestone in 2005. Ramboll submitted an information request to the CA UST Program regarding this tank and is awaiting a reply. This matter is further discussed in Section 6.
Notes: * The site is also listed on the following databases related to regulatory compliance: Enforcement and Compliance History Online (ECHO), California Emission Inventory Database (EMI), and Facility Index System/Facility Registration System (FINDS). Listings on these databases, by themselves, are not necessarily indicative of contamination. The database search report includes listings for past site occupants that may indicate past use or storage of chemicals or petroleum products.	

4.1.2 Database Review for Adjoining Properties

Based on a review of the environmental database search report, Ramboll identified the adjoining sites listed in Table 3 on databases indicative of a potential contamination concern.

Table 3: Contamination-Related Database Listings for Adjoining Properties [1]		
Listing Name or Address and Location Relative to the Subject Site	**Summary of Information Contained in Database**	**Ramboll's Comments**
Multiple Sites (within the interconnected Shops at Tanforan to the north and other adjoining properties to the north)	Dozens of entities operating within the north-adjoining Shops at Tanforan and other adjoining properties are listed on databases (i.e., CERS HAZ WASTE, San Mateo Co. BI, RCRA NonGen/NLR, HWTS, HAZNET, and CERS) related to the generation of hazardous waste. No releases are noted in the listings, and prior waste-related violations issued to certain of these facilities are listed as having been resolved.	Listings on databases related to the generation, by themselves and without indication of a release, are not indicative of a contamination concern and are not further discussed herein.

Table 3: Contamination-Related Database Listings for Adjoining Properties [1]		
Listing Name or Address and Location Relative to the Subject Site	**Summary of Information Contained in Database**	**Ramboll's Comments**
Tanforan Cleaners & Shoe 302 and 402 Tanforan Park (within the interconnected Shops at Tanforan to the north and other adjoining properties to the north)	Tanforan Cleaners & Shoe is listed in the EDR Exclusive Historical Cleaners (EDR Hist. Cleaner) database, which is an EDR proprietary database that indicates that dry cleaning operations may have been performed. The property is listed as a dry cleaning plant, except rugs, from 1991 to 1998. There is no indication of a release in the listing.	Based on Ramboll's observations and information provided by facility personnel, the former dry cleaner is now Tanforan Dental. The site is located within the Shops at Tanforan, approximately 350 ft northwest of JC Penney. According to facility personnel dry cleaning operations did occur at the property. Generally, drycleaners within 500 feet of a site building are considered a potential vapor intrusion concern, however there are no documented releases. This listing is further discussed in Section 6.
Sears #1478 (within the interconnected Shops at Tanforan to the north and other adjoining properties to the north)	Sears #1478 is listed on the San Mateo Co. BI and HIST UST for five USTs installed in 1970; one 500-gallon waste oil, one 12,000-gallon unleaded gasoline, one 12,000-gallon regular gasoline, and two 5,000-gallon premium gasoline. The site is also listed on the CORTESE Hazardous Waste & Substances Sites List (CORTESE) and CERS site for a Leaking Underground Storage Tank (LUST) with open status. Additionally, Sears #1478 is listed on the Emissions Inventory Data (EMI) database for pollutant emissions data collected by the Air Resources Board and local air pollution agencies.	According to documents on GeoTracker, there were seven USTs associated with the Sears Automotive Service Center: two 12,000-gallon gasoline USTs, two 6,000-gallon gasoline USTs, two 530-gallon motor-oil USTs, and one 500-gallon used-oil UST. The four gasoline and two motor-oil USTs were removed from the ground in 1985. The analytical results for soil samples collected during the 1985 removals are not available. In January 1987, the used-oil UST was removed and detectable levels of petroleum hydrocarbons were in the confirmation samples, requiring further investigation. In December 1994, all remaining dispenser islands, product lines, and vent lines were removed from the site. Soil samples collected beneath the former dispenser island and product lines also contained detectable petroleum hydrocarbons, requiring further investigation. Soil and groundwater remediation is ongoing. The contamination is being addressed with regulatory oversight. This matter is further discussed in Section 6.

Table 3: Contamination-Related Database Listings for Adjoining Properties [1]		
Listing Name or Address and Location Relative to the Subject Site	**Summary of Information Contained in Database**	**Ramboll's Comments**
Notes: [1] Ramboll's analysis of adjoining sites was based on observations made during the site reconnaissance (as discussed in Table 2) and location information for off-site listings as presented in the database report. Also, for purposes of this analysis, Ramboll considers as "adjoining" properties that are adjacent, even if separated by a road or other physical barrier. Ramboll has not included a discussion of compliance-related databases in this table, as Ramboll considers it unlikely that off-site properties listed on compliance-related databases without indication of a release or chemical mishandling represent a potential risk for contamination to the subject site.		

4.1.3 Database Review for Other Surrounding Properties

There are several listings in the environmental database report for non-adjoining off-site facilities within applicable ASTM search radii; however, Ramboll has not identified any properties that are likely to represent a potential contamination concern to the site.[2]

The database report indicates that poor or inadequate address information was available for several sites located in the vicinity of the subject site; therefore, these sites could not be readily mapped by the third-party provider. Because the location of these sites with respect to the subject site could not be evaluated, Ramboll is limited in its ability to express an opinion regarding the potential for impact to the subject site from these sites. It was beyond the scope of this review to accurately locate each of the unmapped sites identified by the third-party provider; however, Ramboll reviewed the list of unmapped sites and verified that none appeared to be adjacent to the subject site.

4.2 Historical Uses of the Site and Adjacent Sites

4.2.1 Past Uses of the Site

The site was developed with the southern portion of the Tanforan Race Track in 1899. The Race Tack hosted horse and dog racing, and also had motorcycle and automobile racing tracks. The Race Track, was temporarily converted into a Unites States military training center during World War I (1914 – 1918). The 1925 Sanborn map depicts the site as having been developed with a portion of the dirt track, numerous stalls, a club house, and the southern portion of the Grand Stand. In 1941, during World War II, the United States military again utilized the Race Track as a training center and from April to October 1942, the Tanforan Race Track became known as the Tanforan Assembly Center – an internment camp for Japanese Americans. By 1950, the military training center was removed. The 1949 and 1953 Sanborn maps depict two artificial lakes in the middle of the site and the northern portion of a small warehouse in the southeastern portion of the site; the stalls are no longer depicted. The Race Track and associated structures burned down in 1964, and the current site building and former automotive shop operations building was constructed in 1972. The former automotive operations building, located in the southeastern portion of the site, was demolished in 2005. According

[2] In its evaluation, Ramboll considered only non-adjoining sites listed on databases indicative of contamination, with open status, located potentially upgradient of the site to represent a potential risk for contamination to the site (as the issuance of regulatory closure suggests that impacts to the subject site from the noted off-site property are unlikely).

to information provided by facility personnel and in the database report, former automotive shop operations were conducted at the site from 1972 to 2005, however the operations were leased to Firestone from 1983 to 2005.

4.2.2 Past Uses of Adjacent Sites

The properties in the vicinity of the site were used as the Tanforan Race Track (north and south) from 1899 to 1964 including temporary military operations, as discussed in Section 4.2.1. The properties to the east have been single-family residential since at least 1943. In addition, the properties to the west of the site were used by the United States military for apparent residential and/or storage purposes from the 1940s until as recently as the 1990s; these properties were redeveloped in the early 2000s for residential and commercial uses. The 1949 Sanborn depicts a gas station to the northwest , which is the current location of Shell Gas Station. Highway 280 (adjoining to the south) and The Shops at Tanforan (adjoining to the north) were constructed in the early 1970s and the The Shops at Tanforan have been operated by various entities as restaurants and retailers (i.e., apparel, homeware, jewelry, electronics, beauty, children's toys), beauty salons since that time. Furthermore, the properties further south of the site have been used for residential purposes since at least the 1940s. Ramboll did not observe obvious indications of concern on the historical sources reviewed.

4.3 Review of Local and State Agency Information

Ramboll visited or otherwise contacted local governmental agencies and regulatory bodies for information relating to the site. An overview of the findings of this review is presented in the table below.

Table 4: Local Agency Information for the Site

Agency Contacted / Document Reviewed	Information Obtained
San Mateo County Tax Assessor	Tax assessor records indicate that the site is 15.329 acres. No information was provided regarding construction details of the current site building. The site is described on the San Mateo County tax map as 014-316-300.
San Mateo County Environmental Health Services	Ramboll requested information from the San Mateo County Environmental Health Services for information related to septic systems and wells at the site. A response had not been received at the time this report was completed.
City of San Bruno Fire Department	Ramboll requested information from the City of San Bruno Fire Department for information related to USTs, fires, spills, and emergency responses to the site. A response had not been received at the time this report was completed.
CA UST Program	Ramboll requested information from the CA UST Program for information related to USTs at the site. A response had not been received at the time this report was completed.

4.4 Previous Environmental Assessments and Activities

Based on a review of historical site documents and interviews with facility personnel, no prior Phase I environmental assessments, UST closures, environmental sampling, or remediation activities are known to have been conducted at the site.

- Based on a review of historical database documents and interviews with facility personnel, prior tank closure reports may exist but have not been provided to Ramboll.

4.5 User-Provided Information

Ramboll provided Milbank with a User Questionnaire (consistent with Appendix X3 of the ASTM Standard) that requested information relating to environmental liens, activity use limitations (AULs), specialized knowledge of the property, property value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination, that was not otherwise provided to Ramboll. The user did not provide any information that was not otherwise obtained and reviewed by Ramboll.

5. SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

During the site visit, observations of both the interior and exterior portions of the site were made to evaluate if any RECs, as defined in Chapter 7, are present. Ramboll did not observe the roof of the building and a review of the operations of the other tenants of the shopping mall building was not included in Ramboll's scope of work.

5.2 General Site Setting and Observations

Ramboll made observations concerning all of the interior and exterior issues specified in Sections 9.4.2 through 9.4.4 of the ASTM E1527-13 Standard. The presence or absence of each issue of environmental interest or concern is noted in the table below. Additional information regarding observed and historical items is provided in the sections following the table.

Table 5: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
Interior and Exterior Issues		
9.4.2.1	Current use(s) of the property	See Section 3.2
9.4.2.2	Past use(s) of the property	See Section 4.2
9.4.2.3	Hazardous substances and petroleum products used, treated, stored, disposed of, or generated on the property in connection with identified present or past uses	**Present** (see Section 5.2.1)
9.4.2.4	Storage tanks: Underground storage tanks (fill ports, vent pipes, manholes) Aboveground storage tanks	(see Sections 5.2.2 and 5.2.3) Formerly Present Absent
9.4.2.5	Odors (strong, pungent or noxious)	Absent
9.4.2.6	Pools of liquid, standing surface water or sumps	Absent
9.4.2.7	Drums of hazardous substances or petroleum products (five-gallon, 55-gallon or totes)	**Present** (see Section 5.2.1)
9.4.2.8	Hazardous substance and petroleum product containers (not necessarily in connection with identified uses)	**Present** (see Section 5.2.1)
9.4.2.9	Unidentified substance containers suspected of containing hazardous substances or petroleum products	**Present** (see Section 5.2.1)

Table 5: Summary of Site Reconnaissance Observations		
ASTM Section	**Issue**	**Observation**
9.4.2.10	Polychlorinated biphenyls (PCBs) Electrical equipment on-site (e.g., transformers, capacitors) Electrical equipment known or likely to contain PCBs Hydraulic equipment on-site (e.g., elevators, truck dock lifts) Hydraulic equipment known or likely to contain PCBs	(see Section 5.2.4) **Present** Unlikely **Present** Unlikely
Interior Issues		
9.4.3.1	Heating/cooling systems	**Present** (see Table 1)
9.4.3.2	Stains or corrosion on interior floors, walls or ceilings (except for staining from water)	**Present** (see Section 5.2.5)
9.4.3.3	Floor drains and interior sumps	**Present** (see Section 3.2.3)
Exterior Issues		
9.4.4.1	Pits, ponds or lagoons on property or adjacent sites	Absent
9.4.4.2	Stained soil or pavement	**Present** (see Section 5.2.6)
9.4.4.3	Stressed vegetation (from other than insufficient water)	Absent
9.4.4.4	On-site solid waste disposal; areas apparently filled or graded by non-natural causes; or mounds or depressions suggesting solid waste disposal	Absent
9.4.4.5	Wastewater or other liquid (including storm water) or any discharge into a drain, ditch, underground injection system or stream on or adjacent to the property	**Present** (see Section 3.2.3)
9.4.4.6	Wells (including dry wells, irrigation wells, injection wells, abandoned wells, or other wells)	Absent
9.4.4.7	Septic systems or cesspools	Absent
Non-Scope Considerations		
N/A	Asbestos Containing Materials	**Present** (see Section 5.2.7)

Table 5: Summary of Site Reconnaissance Observations		
ASTM Section	**Issue**	**Observation**
Notes: Observations noted in this table and discussed further below are based on information obtained during the site visit and from a review of the sources summarized in Section 4. See the ASTM Standard for a detailed description of the issues included in each referenced ASTM section. Per the ASTM Standard, fluorescent light ballasts likely to contain PCBs are not considered. N/A – Not applicable.		

5.2.1 Hazardous Substances and Petroleum Products

The primary chemicals used at the site include sanitizers and detergents in retail sales areas and beauty products (including bleaches, color developer, etc.) in the beauty salon and department. Chemical storage at the site is limited to refrigerants and other retail-sized (less than five gallons) janitorial and maintenance-related products, such as hydraulic oil, paints, and sanitizers. Three unlabeled approximately 5-gallon containers were located in near the emergency generator in the mechanical penthouse. Facility personnel had no knowledge of the contents or purpose of the containers, but assumed they were diesel fuel for the emergency generator. No evidence of significant release was observed in these areas. Chemicals are not stored in exterior areas of the site.

Facility personnel knew of no significant spills or releases of materials in chemical storage areas. While dedicated secondary containment was not provided for all of the drums and containers, Ramboll did not observe evidence of spills or uncontrolled releases from these storage areas, other than minor staining in some interior (i.e., maintenance area) and paved (i.e., loading dock and parking lot) areas. Staining did not appear to extend to floor drains, storm water drains or unpaved surfaces.

5.2.2 Aboveground Storage Tanks (AST)

No current or former ASTs were identified associated with the site. Although not considered an AST, the site operates a diesel generator that is equipped with a 24-gallon diesel fuel reservoir. Facility personnel did not identify any release associated with the diesel reservoir and no visual evidence of spills or uncontrolled releases was observed during Ramboll's site inspection.

5.2.3 Underground Storage Tanks

A total of five USTs were formerly located at the site in association with the former automotive shop operations and facility. Three 10,000-gallon gasoline (one premium, one unleaded, and one regular) USTs were installed in 1972 and listed as being last used in 1983. One 500-gallon waste oil tank was installed in 1972 and listed on GeoTracker as being active. One 550-gallon waste oil UST with unknown installation date is also listed as being active on GeoTracker. Facility personnel indicate there are no active USTs on site but are unaware of the closure process during the demolition of the Firestone in 2005. The site is not listed on the LUST database. Further information regarding these closure activities is included in Section 6.

5.2.4 Polychlorinated Biphenyls (PCBs)

Facility personnel knew of no on-site equipment that is known to contain polychlorinated biphenyls (PCBs). No transformers are present on the property. The two-story building is equipped with two hydraulic elevators. Facility personnel had no information regarding the hydraulic fluid contained in the elevator reservoir. Because the building was constructed in 1972, before the 1979 federal ban on the manufacture of PCBs, it is possible that the hydraulic fluid contained in the elevator reservoir contain PCBs. Facility personnel indicated that the elevators are serviced annually and within the past year. As such, it is likely that hydraulic fluid used in the building elevators in the early 1970s (and potentially containing PCBs) has been replaced and removed from the site.

Ramboll observed no indication of leaks or releases from electrical equipment during the site visit.

5.2.5 Stains or Corrosion on Interior Floors, Walls, or Ceilings

Ramboll observed minor floor staining in the mechanical penthouse, fire pump room, loading dock area, and maintenance areas. This staining did not appear to be indicative of widespread releases or losses. Concrete floors in the vicinity of the staining appeared to be in good condition, with no evidence of cracking.

5.2.6 Stained Soil or Pavement

Ramboll observed evidence of minor pavement staining in the paved parking areas located north, east and south of the building. This staining is consistent with from minor drips from customer vehicles parked in this area. In addition, Ramboll observed minor pavement staining in the loading dock area. Pavement in the vicinity of the observed staining appeared to be in good condition, with no evidence of cracking.

5.2.7 Asbestos Containing Materials (ACMs)

Although an asbestos inspection and sampling of suspect building materials in conformance with established protocols (as outlined in 40 CFR §763), applicable state or local regulations, or industry standards, were beyond our scope of work, Ramboll made limited visual observations[3] of representative building materials in those areas accessed during the site tour to identify readily apparent PACM and suspect ACM. OSHA's definition of PACM is limited to thermal system insulation (TSI) and surfacing materials present in buildings constructed before 1981. Vinyl floor tiles are not considered PACM, but OSHA nonetheless requires that asphalt and vinyl floor tiles present in buildings constructed before 1981 be treated similarly to PACM. The term suspect ACM is not defined by OSHA but can include numerous building materials manufactured using asbestos currently or in the past (e.g., ceiling tiles, roofing materials, joint compound), as well as TSI, surfacing materials, and flooring materials installed after 1981.

Because the building at the site was constructed prior to 1981 and a comprehensive asbestos survey has not been conducted, TSI, surfacing materials and vinyl/asphalt flooring must be treated as PACM. During the site visit, PACM observed by Ramboll vinyl floor tile, TSI associated with piping, and wall texture. In addition, Ramboll observed other materials potentially considered suspect ACM (e.g., ceiling tile). Also, based on the building age, the roofing materials may be considered suspect ACM.

[3] Ramboll did not observe all building materials or formally survey the facility to determine the presence and condition of PACM and suspect ACM.

There are no regulatory requirements to remove PACM, suspect ACM and known ACM or to confirm whether building materials contain asbestos, unless the materials are damaged and have the potential to release fibers or the materials have the potential to be disturbed during renovation or demolition activities. Ramboll observed certain building materials that were damaged or deteriorating, specifically approximately 6-square-feet of abraded floor tiles were observed on the stairs leading to the mechanical penthouse. OSHA requires building owners and employers to identify locations of PACM and confirmed ACM at the facility and comply with certain employee notification, training, labeling and recordkeeping requirements (29 CFR §1910.1001(j)) and housekeeping programs (1910.1001(k)). The Company does not appear to have developed asbestos training programs, labeled ACM or PACM, or maintained appropriate records, as required.

6. FINDINGS, OPINION, AND CONCLUSIONS

6.1 Findings, Opinions, and Conclusions

6.1.1 Recognized Environmental Conditions

Ramboll has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the JC Penney property located at 1122 El Camino Real in San Bruno, California. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property.

6.1.2 Other Findings

In addition to RECs discussed above, the following additional findings related to potential contamination concerns were identified:

- **Former USTs without Closure Documentation.** A total of five USTs were formerly located at the site in association with the former automotive shop operations and facility. Three 10,000-gallon gasoline (one premium, one unleaded, and one regular) USTs were installed in 1972 and listed as being last used in 1983. One 500-gallon waste oil tank was installed in 1972 and listed as being active. Additionally, one 550-gallon waste oil UST with unknown installation date is also listed as being active. Facility personnel indicate there are no active USTs on site but were unaware of the closure process prior or during the demolition of the automotive operations building in 2005. It is unclear whether the tanks were removed from the ground and if leaks were discovered upon closure of the tanks, as Ramboll has not been provided with reports documenting nature of UST closure activities performed. It does not appear that any confirmatory soil or groundwater samples were collected, and no records indicate that leak detection equipment or overfill alarms were installed at the time of installation. Because Ramboll's review did not identify documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product related to this matter, it is not considered a REC; however, absent further closure or removal documentation, Ramboll cannot confirm that the subsurface was not adversely impacted from the operation of this UST. However, regulatory database search results do not identify any continuing obligations related to the closure of the USTs.
- **Past Operations at the Site.** The site has been used for various purposes since the late 1890s, including as a horse, dog, motorcycle and automotive race track (1899-1964), military training and operations (1914-1918, 1941-1950), internment camp operations (1942), automotive shop operations (1972–2005), and retail operations (1972–present). These former industrial operations may have included the use of petroleum products, solvents, adhesives, paint, metals, acids, caustics, corrosives, explosives, propellants, lead and other chemicals and a fire is known to have occurred in 1964. Additionally, historical operations conducted between site development and the early 1980s predate the enactment of robust environmental regulations related to the handling, storage, and disposal of hazardous chemicals. No subsurface characterization activities are known to have been conducted at the site. Because Ramboll's review did not identify documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product related to this matter, it is not considered a REC; however, absent further information regarding the specific nature of historical chemical use, chemical handling practices, and associated wastes, Ramboll cannot rule out the possibility that inadvertent spills or releases of chemicals or petroleum products may have occurred in the past. Facility personnel are not aware

of any major spills or releases at the site and there is no current regulatory scrutiny related to contamination matters at the site. As such, Ramboll does not consider this finding a REC.

- **Potential for Migration of Contamination from Off-Site Properties.** The site is located adjacent to (500 feet south) an off-site property within the shopping mall that is listed with open status on a database indicative of potential soil or groundwater contamination. The database listing indicates petroleum hydrocarbons contamination of soil and groundwater originating from former UST operations from the Tanforan Race Track and Sears automotive shop operations. The contamination that is currently being remediated under regulatory oversight. The groundwater contamination has been delineated and based on the available information, there is no indication that contamination from the off-site property is migrating to the subject site; however, consistent with ASTM requirements, Ramboll has attempted to undertake a further review through submission of a Freedom of Information Act (FOIA) request to the state environmental agency regarding the database listings. Additionally, the site is located adjacent to (350 feet southeast) an off-site property within the shopping mall that formerly conducted dry-cleaning operations, which potentially included the use of chlorinated solvents. No spills were identified in the database reports, however Ramboll cannot rule out the potential for vapors migrating to the subject site due to an unreported spill. If contamination associated with off-site properties is found to have migrated onto the subject site, it is expected that any remedial activities would be the responsibility of the entities named in the listing or other designated responsible party and not JC Penney. Because Ramboll's review did not identify documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product to the subject site related to this matter, it is not considered a REC.

6.1.3 *De Minimis* Conditions

De minimis conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies. Ramboll identified the following *de minimis* conditions related to the site:

- **Pavement and Floor Staining.** Ramboll observed multiple areas of exterior pavement and interior flooring where oil stains were apparent. The stains were limited in areal extent, the underlying pavement/flooring appeared to be intact, and no stains appeared to reach floor drains or storm water drains. As such, Ramboll considers this matter to represent a *de minimis* condition.

6.1.4 Non-Scope Considerations

Ramboll identified the following finding that relates to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Asbestos-Containing Materials.** The building was constructed before asbestos was generally phased out of use in most building material applications in the 1980s. A formal asbestos survey has not been conducted at the facility. Ramboll conducted limited visual observations of limited areas of the buildings at the site and noted PACM (e.g., vinyl floor tile, TSI associated with piping, wall texture) and other materials that may contain asbestos (e.g. ceiling tiles).

6.2 Analysis of Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience,

raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Facility personnel did not have current contact information for representatives of former site owners/occupants. Thus, Ramboll was unable to interview former owners/occupants about historical operations and site conditions.
- During the site visit, Ramboll did not observe the roof of the building due to access and safety constraints.
- Historical information, such as aerial photographs, was not readily available to characterize the property from the present back to the property's obvious first developed use or 1940, whichever is earlier. The earliest readily available historical source that would indicate specific site uses is a Sanborn Map dated 1925, which shows that at least a portion of the property was already developed as the Tanforan Race Track.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above are considered to represent significant data gaps.

7. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

REC - Recognized Environmental Condition:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

CREC - Controlled Recognized Environmental Condition:

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

HREC - Historical Recognized Environmental Condition:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

***De minimis* Condition:**

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Data Gap / Significant Data Gap:

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap is significant if other information and/or professional experience raises concerns involving the data gap.

Please note that the term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

1. SUMMARY OF CONCLUSIONS

Ramboll US Consulting, Inc. (Ramboll) was retained by Alexandria Real Estate Equities, Inc. (ARE or "the Client") to perform a Phase I Environmental Site Assessment (ESA) of the site located at 1122 El Camino Real in San Bruno, California (herein referred to as the "facility" or the "site"). Ramboll's assessment was conducted in connection with a potential purchase of the site. The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the "ASTM Standard"), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard (see Section 7).

1.1 Site Summary

CTL PropCo I LLC owns the JC Penney retail department store, associated parking garages, and parking lots at the site. The approximately 15-acre site is improved with an approximately 223,232-square-foot building, which is connected to the rest of The Shops at Tanforan (the "shopping mall building") to the north but is situated on its own parcel of land. The building is currently used as a retail department store and includes sales areas, a salon, a digital portrait studio, optical office, product storage, offices, employee areas, and restrooms. Other areas of the site consist of parking garages to the east and south, and surface parking lots to the west and southeast of the site building.

The site was developed with the southern portion of the Tanforan Race Track ("Race Track") in 1899. The Race Track, was temporarily converted into a United States military training center from 1914 to 1918 and from 1941 to 1950, including an internment camp in 1942. Structures associated with the Race Track were destroyed in a fire in 1964, and the current site building and former automotive operations building were constructed in 1972. The existing parking structures were built in the 2000s. JC Penney has operated the facility as a retail department store since 1972. The automotive shop operations building, associated with the addresses 1110 and 1112 El Camino Real and formerly located in the southeast corner of the site, was demolished in 2005.

1.2 Recognized Environmental Conditions

Ramboll performed a Phase I ESA of the site at 1122 El Camino Real in San Bruno, California in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no RECs in connection with the site.

1.3 Other Findings

Although not considered RECs, Ramboll identified the following notable other findings. The term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

- **Former USTs without Closure Documentation.** A total of five USTs were formerly located at the site in association with the former automotive shop operations. Three 10,000-gallon gasoline (one premium unleaded, one unleaded, and one regular) USTs were installed in 1972 and listed as being last used in 1983. One 500-gallon waste oil tank was installed in 1972 and listed as being active. Additionally, one 550-gallon waste oil UST with an unknown installation date is also listed as being active. Facility personnel indicate there are no active USTs on site but had no knowledge regarding the historical UST closure process(es) prior or during the demolition of the automotive operations building in 2005, and closure documentation is not available from other resources reviewed for this assignment. Regulatory database search results do not identify any continuing obligations related to the closure of the USTs. Because Ramboll's review did not identify

documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product related to this matter, it is not considered a REC; however, additional information (e.g., confirmatory sample data) would be required to evaluate the potential for subsurface impacts, if any, related to the operation of USTs at the site.

- **Past Operations at the Site.** The site has been used for various purposes since the late 1890s, including as a horse, dog, motorcycle and automotive race track (1899-1964), military training and operations (1914-1918, 1941-1950), internment camp operations (1942), automotive shop operations (1972–2005), and retail operations (1972–present). Several of these former operations may have included the use of petroleum products, solvents, adhesives, paint, metals, acids, caustics, corrosives, explosives, propellants, lead, and other chemicals. Additionally, historical operations conducted between site development and the early 1980s predate the enactment of robust environmental regulations related to the handling, storage, and disposal of hazardous chemicals. No subsurface characterization activities are known to have been conducted at the site. Ramboll's review did not identify documentation of a release. Facility personnel are not aware of any major spills or releases at the site and there is no current regulatory scrutiny related to contamination matters at the site.

1.4 Non-Scope Considerations

Ramboll identified the following finding that relates to non-scope considerations:

- **Asbestos-Containing Materials (ACMs).** The building (1972) and parking structures (2000s) at the site were constructed prior to and after the time that asbestos was generally phased out of use in many building material applications during the mid-1980s. According to facility personnel, multiple asbestos abatements have been conducted in the past during renovation of the men's and junior's departments of the store. Exact dates and building materials removed during abatements are unknown. Additionally, given the date of construction of the building (1972) at the site, it is possible that other ACMs are present in building materials. In the event that renovation or demolition of structures is to occur in the future, a comprehensive (demolition-level) asbestos survey is required.
- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the building in 1972, it is likely that lead-based paint was used on facility structures. Facility personnel were not aware of the presence of any lead-based paint on structures at the facility, and Ramboll observed the paint to be in good condition.
- **Water Intrusion/Mold.** Ramboll did not perform a mold survey at the site. Facility personnel reported that there had not been any past water intrusion events.
- **Radon.** Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, out of 45 sites surveyed in San Mateo County, three sites were over 4 pCi/L. A USEPA survey conducted in the same zip code as the site found that the average radon level of a first floor room at two sites was 0.100 pCi/L.

2. INTRODUCTION

2.1 Purpose

Ramboll was retained by ARE to conduct a Phase I ESA of the site in connection with a potential financial transaction. The purpose of the assessment was to identify RECs, which are defined in the ASTM Standard as:

> "The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions."

2.2 Scope of the Assessment

Ramboll completed the following tasks, consistent with the ASTM Standard, during its Phase I ESA of the site:

- A visit to the site by Katie Zheng of Ramboll on June 28, 2021 to observe the exterior and interior features of the site and to identify the uses and conditions specified in Sections 9.4.1 through 9.4.4.7 of the ASTM Standard. In addition, Ramboll observed the adjoining properties from the site or adjacent public thoroughfares. Photographs taken during the site visit are presented in Appendix A.
- An interview during or prior to the site visit with the following individuals (year associated with the site indicated in parentheses): Melinda Kaufman, General Manager (2021) and Craig Gomez, Asset Protection Manager (2016). The aforementioned individuals are referred to herein as "facility personnel". The facility personnel interviewed by Ramboll were identified by the Company as having good knowledge of the uses and physical characteristics of the site.
- A review of a radius report prepared by Environmental Data Resources, Inc. (EDR, see Appendix B), which presents the results of searches of federal and state databases for the site, as well as properties near the site. The radius searched for each database, as well as the databases themselves, were selected in accordance with the ASTM Standard.
- A review of information contained in federal and state environmental databases, as obtained from the sources noted below:
  - The United States Environmental Protection Agency's (USEPA's) EnviroFacts database, which provides site information contained in multiple USEPA regulatory databases.
  - The Department of Toxic Substances Control (DTSC) EnviroStor database, which contains information about certain regulated facilities in California.
  - The State Water Resources Control Board (SWRCB) GeoTracker database, which contains information about groundwater contamination and clean-up sites in California
  - The California Geologic Energy Management Division (CalGEM), which contains information regarding oil and gas wells on and in the site vicinity
  - The DTSC Hazardous Waste Tracking System (HWTS), which contains hazardous waste manifest information reported to CalEPA.
  - The Enforcement and Compliance History Online (ECHO) database, which aggregates USEPA compliance information.

- A review of standard historical sources (included as Appendix C) and local agency inquiries, as defined in the ASTM Standard. The following resources were reviewed:
  - Readily available historical sources, including (where available) historical topographic maps and aerial photographs, city directories, and Sanborn Maps, to develop a history of the previous uses of the site and surrounding area.
  - Historical and site-specific information obtained from the following local agencies: the San Mateo County Assessor's Office (Assessor), San Mateo County Department of Environmental Health (SMCDEH), and the San Bruno Building Department (Building Department). Ramboll also requested information from the Department of Toxic Substances Control (DTSC), Regional Water Quality Control Board (RWQCB), San Bruno Fire Department (Fire Department), and the San Bruno Public Works Department (Public Works Department), and was informed that the agencies did not have any records pertaining to the site.
- A review of physical setting sources, as defined in the ASTM Standard, including:
  - The current United States Geological Survey (USGS) 7.5-minute topographic map that shows the area on which the site is located.
  - Geologic, hydrogeologic, or hydrologic sources as provided in the environmental database report.
- Ramboll was provided with the following previous environmental assessment report, which is included as Appendix D:
  - *Phase I Environmental Site Assessment for 1122 El Camino Real*, San Bruno, California, prepared by Ramboll US Consulting, Inc., dated December 2020 (the "2020 Phase I ESA report").
- A search for environmental liens or other activity and use limitations (AULs) for the site, provided by the third-party database provider (as shown in Appendix E). Ramboll ordered the lien search using the parcel number believed to be associated with the site, as obtained from the local tax assessor's office and other online resources.
- A review of any information provided by the user of this assessment, including information consistent with Appendix X3 of the ASTM Standard. Pertinent information, if any, is discussed in the appropriate sections of this report.

This assessment was conducted in accordance with the methodology specified in ASTM Standard E1527-13, as agreed upon by Ramboll and the Client in June 2021. The standard ASTM scope was expanded to include a limited review of asbestos-containing materials, lead-based paint, water intrusion, and radon.

2.3 Significant Assumptions

In conducting this review, no significant assumptions were made, except for the following:

- Site-specific field measurements or other detailed hydrogeological information was not publicly available or reasonably ascertainable. In the absence of such data, Ramboll has assumed that the flow direction of shallow groundwater beneath the site and in the local vicinity generally mimics surface topography. Therefore, in evaluating potential on-site impacts from off-site sources, those off-site facilities not located adjacent to or within one-quarter mile upgradient of the subject site are not considered to represent a significant concern to the site. This interpretation is based on the assumption that a hazardous material released to the subsurface generally does not migrate

laterally within the unsaturated soil for a significant distance, although a hazardous material can migrate in the groundwater in a generally downgradient direction. There are, however, limits to this interpretation.

2.4 Reliance and General Limitations

This report has been prepared for the exclusive use of ARE and its affiliated entities and may not be relied upon by any other person or entity without Ramboll's prior express written permission.

This report is considered current only for a period of 180 days from the site inspection. The conclusions presented in this report represent Ramboll's professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll must rely upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, the conclusions in this report are valid only to the extent that the information provided to Ramboll was accurate and complete. This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility compliance. Ramboll makes no representations or warranties, expressed or implied, about the conditions of the site.

Ramboll's scope of work for this assignment did not include collecting samples of any environmental media. As such, this review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll's review; however, this report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

The scope of work for this assessment did not include an asbestos survey or inspection. According to federal OSHA regulations (29 CFR §1910.1001) and the Model Accreditation Plan (MAP; 40 CFR Part 763, Subpart E, Appendix C), the inspection, testing, evaluation, and/or sampling of suspect asbestos-containing materials must be conducted by an accredited inspector; these activities were not performed as part of this environmental review. Comments in this report regarding the condition of building materials at the site, including materials typically considered suspect ACM, represent only Ramboll's observations at the time of the site visit and are not intended to be consistent with definitions regarding ACM condition in the Asbestos Hazard Emergency Response Act (AHERA) or in other federal or state asbestos regulations or industry standards.

Other issues considered outside the scope of the ASTM Standard and this review include lead in drinking water, polychlorinated biphenyls (PCBs) in building materials, cultural and historic resources, ecological resources, endangered species, and high voltage power lines.

However, Ramboll evaluated: the potential for asbestos and lead-based paint to be present in building materials based solely on the age of the buildings, the potential for radon and wetlands to be present in the vicinity of the site based on information provided by EDR, and the potential for water intrusion to have taken place at the building based on limited visual observations and information provided by facility personnel.

3. SITE DESCRIPTION

3.1 Site Setting

The site is owned by CTL PropCo I, LLC. The approximately 15-acre site is located approximately 10 miles south of San Francisco, California (Figure 1). According to the Assessor's Office, the assessor's parcel number (APN) for the site is 014-316-300.

The approximately 15-acre site is developed with an approximately 223,232-square-foot two-story building, which is located in the northern portion of the site. The building is connected to the rest of The Shops at Tanforan (the "shopping mall building") to the north but is situated on its own parcel of land. The remaining areas of The Shops at Tanforan (the "shopping mall building") are operated by various entities as restaurants, retailers (i.e., apparel, homeware, jewelry, electronics, beauty, children's toys), and beauty salons. A review of the operations of the other tenants of the shopping mall building was not included in Ramboll's scope of work. The building is currently used as a retail department store and included sales areas, a salon, a digital portrait studio, optical office, product storage, offices, employee areas, and restrooms. Other areas associated with the site consist of parking garages to the east and south and parking lots to the west and southeast of the site building.

The site is accessed primarily from El Camino Real at the western site boundary and Huntington Avenue at the eastern site boundary. Customer and employee parking areas are present to the east, south, and west of the building, and delivery truck access to a loading dock is provided to the south of the building. There are no on-site surface water bodies.

Table 1 provides an overview of physical setting and utility information for the site.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map; Google Earth	Ranges from approximately 42 feet near the northeastern corner to 68 feet along the northwestern corner of the site.
Topographic Gradient	USGS topographic map; visual observations	Relatively flat on site, with a gentle downward slope to the east/northeast. Regional topography slopes gently downward to the east.
Hydrology		
Storm Water Runoff	Visual observations	Enters catch basins that discharge to the municipal storm sewer system.
Nearest Surface Water Body to the Site	USGS topographic map; Visual observations	San Bruno Canal, located approximately 3,300 feet to the northeast at its nearest point. The Canal ultimately discharges to the San Francisco Bay, located approximately 1.5 miles to the east of the site.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Flood Plain	FEMA*; Facility personnel;	Facility personnel reported no known occurrences of flooding at the site. The site is not located within a 500-year flood zone.
Wetlands	NWI*	There are no federally designated wetlands on site. Federally designated wetlands are located approximately one-half mile east and northeast of the site.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map; 2018 First Semi-Annual Groundwater Monitoring Report, Sears Automotive Center, 1178 El Camino Real, San Bruno, California	Based on the topographic gradient, shallow groundwater likely flows to the northeast toward the San Francisco Bay. A 2018 groundwater monitoring report from 1178 El Camino Real, a property to the north, indicated that groundwater flows north to north-northeast.
Depth to Groundwater	2018 First Semi-Annual Groundwater Monitoring Report, Sears Automotive Center, 1178 El Camino Real, San Bruno, California	Based on groundwater monitoring conducted in 2014 at 1178 El Camino Real, groundwater was encountered at approximately 18 to 20 feet bgs.
On-site Wells	Facility personnel; Visual observations	There are no production or monitoring wells on site. There are also no injection, oil, or natural gas wells on site.
Nearest Groundwater Supply Wells	Database report	One federally registered well, which is registered as a public supply well, is present 2,500 feet southeast of the site. Approximately four private or municipal wells that may be used for water supply are located within one mile south and west of the site.
Geologic Conditions	NCSS*	Regional soils are urban land with very slow infiltration rates.
Site Utility Information		
Heating and Cooling Equipment	Facility personnel	Natural-gas fired heating units supply building heat. The building is cooled with air conditioning units.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Electricity Supplier	Facility personnel	Pacific Gas and Electric (PG&E)
Natural Gas Service	Facility personnel	PG&E
Use of Fuel Oil for Building Heat	Facility personnel	No known current or former use of fuel oil for building heat.
Water Supply	Facility personnel; City Website	City of San Bruno
Sanitary Sewer	Facility personnel	The site is connected to the municipal sanitary sewer system maintained by the City of San Bruno
Septic Systems	Facility personnel	No identified current or former septic systems.

Notes:

FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey; NWI = National Wetlands Inventory

* - Source was provided in the environmental database report.

3.2 Current Use of Site

3.2.1 Current Operations

JC Penney currently operates a retail department store at the site, which includes the storage and sale of primarily clothing, shoes, accessories, housewares, and beauty supplies (Sephora). The Company also operates a salon, a digital portrait studio, and optical office. Ancillary operations at the facility include administrative activities, shipping, receiving, and building maintenance. Small quantities of maintenance-related chemicals, janitorial supplies, and haircare products are used. One 55-gallon drum of hydraulic oil is stored in the freight elevator control room.

According to DTSC's Hazardous Waste Tracking System (HWTS), the site is registered as a small quantity generator (SQG) of hazardous wastes that include but are not limited to the following: Non-RCRA hazardous waste (makeup, lotions, hair products, lubricants, glues, and paints), flammable liquids (paints, fragrances, nail polish, and rubbing alcohol), aerosols (hairspray, WD-40, pesticides, insecticides), oxidizing materials (hydrogen peroxide and bleach), universal waste (batteries, ballasts, and fluorescent light bulbs). Non-hazardous wastes generated at the site include general trash and recycling (carboard, plastic bags, paper, bottles, and cans). Trash is stored in a compactor located in the loading dock area south of the building. Recyclables are loaded onto a truck at the loading dock and transported to a store support center in Reno.

3.3 Current Uses of Adjoining Properties

The site is located in a mixed residential/commercial land use area. The nearest residential area is located approximately 200 feet east (downgradient) of the site. Based on discussions with facility

personnel, Ramboll's visual observations from the site boundary and public rights-of-way, and a limited review of publicly available information, a general evaluation of the current use of adjacent properties was developed, as described Table 2.

Table 2: Current Use of Adjacent Properties

Direction	Property/Land Use	Ramboll's Observations
North	The Shops at Tanforan, of which the site is a part, followed by Sneath Lane.	No apparent exterior manufacturing or chemical storage operations were observed. No concerns were noted.
East	Huntington Avenue, followed by a residential area.	No apparent exterior manufacturing or chemical storage operations were observed. No concerns were noted.
South	Highway 380, followed by a residential area.	No apparent exterior manufacturing or chemical storage operations were observed. No concerns were noted.
West	El Camino Real. A mixed residential and commercial area is located across El Camino Real.	No apparent exterior manufacturing or chemical storage operations were observed. No concerns were noted.

Notes:

During the site visit, Ramboll walked or drove by the borders of these properties that are adjacent to the subject site. Ramboll did not enter the neighboring properties.

4. REVIEW OF PUBLIC RECORDS AND OTHER INFORMATION SOURCES

4.1 Environmental Regulatory Database Review

Ramboll contracted with EDR in June 2021 to prepare of summary of listings in federal and state agency databases for the site and facilities within applicable radii of the property, as specified by the ASTM standard.[1] A copy of the environmental database search report is presented in Appendix B.

4.1.1 Database Review for Site

Ramboll reviewed the results of the state and federal environmental database searches performed by a third-party database provider (see Appendix B) and also searched the GeoTracker, EnviroStor, and HWTS databases. The site is listed on several environmental databases, as discussed in Table 3.

Table 3: Summary of Environmental Database Listings for the Site

Summary of Information Contained in Database	Ramboll's Comments
JC Penney Store #1959 is listed in the Resource Conservation and Recovery Act (RCRA) database as a non-generator of hazardous waste. The site is also listed on the San Mateo County Business Inventory (San Mateo Co. BI), California Environmental Reporting System (CERS), CERS Hazardous Waste (CERS HAZ WASTE), HWTS, and Facility and Manifest Data (HAZNET) databases as a generator of asbestos-containing waste, aged or surplus organics, unspecified solvent mixtures, other inorganic solid waste, and laboratory waste chemicals. No current violations or issues of noncompliance are identified. The CERS database lists numerous historical violations, which appear to have been resolved.	The listings do not suggest a contamination concern to the site. Additionally, all violations appear to have been resolved. Wastes generated at the site are further discussed in Section 3.2.2.
Firestone 36F3 is listed at the site address as a gas station in the Historical UST (HIST UST) database for four USTs installed in 1972, including three 10,000-gallon tanks (one premium, one unleaded, and one regular, all of which were last used in 1983) and one 500-gallon waste oil tank. JC Penney is also listed in the HIST UST database for the same 500-gallon waste oil tank.	A total of five USTs were listed as formerly located at the site in association with the former automotive shop operations. Three 10,000-gallon gasoline USTs were installed in 1972 and listed as being last used in 1983. One 500-gallon waste oil tank was installed in 1972 and listed as being active. Additionally, one 550-gallon waste oil UST with an unknown installation date is also listed as being active. Facility personnel indicate there are no active USTs on site but were unaware of the closure process prior or during the demolition of the automotive operations building in 2005. It is unclear whether the tanks were removed from the ground and if leaks were discovered upon closure of the tanks. This matter is further discussed in Section 6.

[1] EDR uses the term "radii" to refer to the ASTM terminology "approximate minimum search distance" in the environmental database report.

Table 3: Summary of Environmental Database Listings for the Site	
Summary of Information Contained in Database	**Ramboll's Comments**
Firestone listed at 1110 El Camino Real is listed in the HIST UST, Statewide Environmental Evaluation and Planning System UST (SWEEPS UST), California Facility Inventory Database UST (CA FID UST), and San Mateo Co. Business Inventory (San Mateo Co. BI) databases for one active 550-gallon waste oil UST.	The listing indicates a different address than the Firestone 36F3 above, however facility personnel indicate there was only one Firestone in the area, which was located on the site. According to facility personnel, there are no active USTs on site, and no information is available regarding the closure process during the demolition of the Firestone in 2005. This matter is further discussed in Section 6.
Notes: * The site is also listed on the following databases related to regulatory compliance: Enforcement and Compliance History Online (ECHO), California Emission Inventory Database (EMI), San Mateo County Business Inventory (San Mateo CO. BI), and Facility Index System/Facility Registration System (FINDS). Listings on these databases, by themselves, are not necessarily indicative of contamination. The database search report includes listings for past site occupants that may indicate past use or storage of chemicals or petroleum products.	

4.1.2 Database Review for Adjoining Properties

Based on a review of the environmental database search report, Ramboll identified the adjoining properties listed in Table 4 on databases indicative of a potential contamination concern.

Table 4: Contamination-Related Database Listings for Adjoining Properties [1]		
Listing Name or Address and Location Relative to the Subject Site	**Summary of Information Contained in Database**	**Ramboll's Comments**
Tanforan Cleaners & Shoe 302 and 402 Tanforan Park (within the interconnected Shops at Tanforan to the north)	Tanforan Cleaners & Shoe is listed in the EDR Exclusive Historical Cleaners (EDR Hist. Cleaner) database, which is an EDR proprietary database that indicates that dry cleaning operations may have been performed. The property is listed as a dry cleaning location from 1991 to 1998. There is no indication of a release in the listing.	The former dry cleaner is now Tanforan Dental and located approximately 350 ft northwest and cross gradient of the site. The EDR proprietary database from which this listing is derived is based on business names as opposed to records or permits indicating dry cleaning was actually performed at the location. Based on the absence of indications of a release and/or subsurface impacts, this matter is unlikely to present a major concern to the site.

Table 4: Contamination-Related Database Listings for Adjoining Properties [1]

Listing Name or Address and Location Relative to the Subject Site	Summary of Information Contained in Database	Ramboll's Comments
Sears #1478 (within the interconnected Shops at Tanforan to the north)	Sears #1478 is listed on the CORTESE Hazardous Waste & Substances Sites List (CORTESE) and CERS site for a Leaking Underground Storage Tank (LUST) with open status.	Seven USTs associated with the Sears Automotive Service were removed in the 1980s. Soil samples collected during tank removal activities contained detectable concentrations of petroleum hydrocarbons, requiring further investigation. Subsurface impacts appear to have been delineated, and soil and groundwater remediation is ongoing. Given that the property is currently under active regulatory oversight, responsible parties have already been identified for contamination, and groundwater flow to the northeast (away from the site), this listing does not appear to represent a significant contamination concern for the site.

Notes:

[1] Ramboll's analysis of adjoining properties was based on observations made during the site reconnaissance (as discussed in Table 2) and location information for off-site listings as presented in the database report. Also, for purposes of this analysis, Ramboll considers as "adjoining" properties that are adjacent, even if separated by a road or other physical barrier. Ramboll has not included a discussion of compliance-related databases in this table, as Ramboll considers it unlikely that off-site properties listed on compliance-related databases without indication of a release or chemical mishandling represent a potential risk for contamination to the subject site.

4.1.3 Database Review for Other Surrounding Properties

There are several listings in the environmental database report for non-adjoining off-site facilities within applicable ASTM search radii; however, Ramboll has not identified any properties that are likely to represent a potential contamination concern to the site.[2]

The database report indicates that poor or inadequate address information was available for several properties located in the vicinity of the subject site; therefore, these properties could not be readily mapped by the third-party provider. Because the location of these properties with respect to the subject site could not be evaluated, Ramboll is limited in its ability to express an opinion regarding the potential for impact to the subject site from these properties. It was beyond the scope of this review to accurately locate each of the unmapped properties identified by the third-party provider; however, Ramboll reviewed the list of unmapped properties and verified that none appeared to be adjacent to the subject site.

[2] In its evaluation, Ramboll considered only non-adjoining sites listed on databases indicative of contamination, with open status, located potentially upgradient of the site to represent a potential risk for contamination to the site (as the issuance of regulatory closure suggests that impacts to the subject site from the noted off-site property are unlikely).

4.2 Historical Uses of the Site and Adjacent Properties

4.2.1 Past Uses of the Site

The site was developed with the southern portion of the Tanforan Race Track in 1899. The Race Tack hosted horse and dog racing, and also had motorcycle and automobile racing tracks. The Race Track, was temporarily converted into a United States military training center during World War I (1914 – 1918). The 1925 Sanborn map depicts the site as having been developed with a portion of the dirt track, numerous stalls, a club house, and the southern portion of the Grand Stand. In 1941, during World War II, the United States military again utilized the Race Track as a training center and from April to October 1942, the Tanforan Race Track became known as the Tanforan Assembly Center – an internment camp for Japanese Americans. By 1950, the military training center was removed. The 1949 and 1953 Sanborn maps depict two artificial lakes in the middle of the site and the northern portion of a small warehouse in the southeastern portion of the site; the stalls are no longer depicted. The Race Track and associated structures burned down in 1964, and the current site building and former automotive shop operations building was constructed in 1972. The former automotive operations building, located in the southeastern portion of the site, was demolished in 2005. According to information from facility personnel, the 2020 Phase I ESA report, and the database report, former automotive shop operations were conducted at the site from 1972 to 2005, and operated by Firestone from under a lease from 1983 to 2005.

Table 5: Summary of Key Observations from Historical Sources for the Subject Site

Historical Source	Key Observations Regarding Site History
Sanborn Maps (1925, 1949, and 1953)	The 1925 Sanborn map depicts the site developed with the southern portion of the Tanforan Race Track. Along the outer edges of the track are stables to the east and stands to the west. The 1949 and 1953 Sanborn maps depicts two lakes in the northern-central portion of the site and a warehouse in the southeastern portion of the site.
Aerial Photographs and Satellite Imagery[1] (1946 to 2016)	In the 1943 and 1946 photographs, the site appears developed with the southern portion of the Tanforan Race Track and buildings on the outer western and eastern edges of the track. The 1956 photograph depicts an artificial lake in the middle of the site. In the 1963 photograph, the artificial lake is no longer depicted. In the 1968 photograph, the site appears graded and buildings are no longer present. The 1974 photograph shows to existing building (part of the greater shopping mall building) and a building in the southeastern corner of the site, and parking lots in the remaining areas. In the 2006 photograph, the southeastern building is no longer present at the site. The 2009 photograph shows an additional parking level structure at the southern central portion of the site. The 2009 and subsequent photographs show the site in its present configuration, with one building present. No concerns are noted.
Topographic Maps (1896 to 2012)	The maps from 1896 to 1915 show a railway running through the northern and southern boundaries of the site. In the 1939 map, the site is developed with the southern portion of the Tanforan Race Track and buildings on the outer western and eastern edges of the track. In the 1947 through 1956 maps, two artificial lakes are present in the center of the site. In the 1968 map, no structures or features are located on the site. In the 1980 map, two buildings are present in the northern-central and southeastern portions of the site. No structures are visible on the subsequent maps. Roadways are depicted on the site in the 2012 map. No concerns are noted.

Table 5: Summary of Key Observations from Historical Sources for the Subject Site

Historical Source	Key Observations Regarding Site History
City Directory Abstracts (1953 to 2017)	The occupants of three site buildings as of 2017 are listed as: Penney JC Casualty (1986) JF Ardly OD (1995) JC Penney Company Incorporated Tanforan Shopping Center (2000-2017) San Bruno Police Association (2005) Sephora Inside JC Penney (2014)
Property Tax Map Report	The EDR Property Tax Map Report shows the site is located on Parcel C of tax code area 14-31
Lien and AUL Search Report	As of January 30, 2021, the title for parcel number 014-316-300 was transferred from J.C Penney Properties, LLC to CTL PropCo I LLC. No liens or AULs are associated with the site.

Notes:

[1] In addition to aerial photographs provided by the third-party provider, Ramboll viewed historical satellite imagery provided via Google Earth. Printed copies were not obtained, and imagery dates were not independently verified.

4.2.2 Past Uses of Adjacent Properties

The properties in the vicinity of the site were used as the Tanforan Race Track (north and south) from 1899 to 1964 including temporary military operations, as discussed in Section 4.2.1. The properties to the east have been single-family residential since at least 1943. In addition, the properties to the west of the site were used by the United States military for apparent residential and/or storage purposes from the 1940s until as recently as the 1990s; these properties were redeveloped in the early 2000s for residential and commercial uses. The 1949 Sanborn depicts a gas station to the northwest, which is the current location of a Shell gas station. Highway 280 (adjoining to the south) and The Shops at Tanforan (adjoining to the north) were constructed in the early 1970s and The Shops at Tanforan have been operated by various entities as restaurants, retailers (i.e., apparel, homeware, jewelry, electronics, beauty, children's toys), and beauty salons since that time. The properties further south of the site have been used for residential purposes since at least the 1940s. Ramboll did not observe obvious indications of concern on the historical sources reviewed.

4.3 Review of Local and State Agency Information

Ramboll visited or otherwise contacted local governmental agencies and regulatory bodies for information relating to the site. An overview of the findings of this review is presented in the table below.

Table 6: Local Agency Information for the Site

Agency Contacted/ Document Reviewed	Information Obtained
San Mateo County Tax Assessor	The site is described on the San Mateo County tax map as 014-316-300.

Table 6: Local Agency Information for the Site

Agency Contacted/ Document Reviewed	Information Obtained
San Mateo County Environmental Health Services	Ramboll requested information from the San Mateo County Environmental Health Services. Records provided include Hazardous Materials Business Plans (HMBPs), Certified Unified Program Agency (CUPA) small quantity generator and storage of hazardous waste permits, HMBP inspection reports, stormwater inspection reports, emergency response/contingency plans, training plans, CERS submittals, and an environmental health application. Minor violations related to record keeping/documentation, training, manifests, and outdoor waste disposal/storage were reported. Major violations were not reported. A 2012 HMBP report details the storage of perfumes, rubbing alcohols, foaming acid restroom cleaners, tile and grout rejuvenator, aerosols, paints and primers, diesel fuel for an emergency backup generator, and universal wastes. A permit of one monitoring well installation/destruction was provided as part of an investigation for a nearby property in 2015.
City of San Bruno Building Department	Ramboll requested information from the City of San Bruno Building Department for information related to building permits, correspondence, plot plans and address activity report to the site. Records provided include building permits (for walls, fixtures, flooring, tenant improvements, fire alarm system, a curb ramp, firework stands), floor plans, and inspection records.

4.4 Previous Environmental Assessments and Activities

Based on a review of historical site documents and interviews with facility personnel, a prior environmental assessment has been conducted at the site, as summarized below. Pertinent historical and site-related information contained in the prior reports has been incorporated into other sections of this report.

- **2020 Phase I Environmental Site Assessment.** In 2020, Ramboll conducted a Phase I ESA at the site and found no RECs in connection with the site. Notable other findings were identified, including the following: (1) former USTs at the site without closure documentation and soil and groundwater confirmation sample results; (2) past site operations that may have included the use of petroleum products, solvents, and other chemicals; and (3) potential migration of contamination from off-site properties (Sears and a former dry-cleaner) located within the shopping mall building. Based on supplemental information reviewed for this assignment regarding contamination at off-site properties, it appears contamination at the downgradient Sears property has been delineated and migrates to the northeast, away from the site, and there is no evidence to suggest that the former dry cleaner (located cross gradient of the site) released chemicals to the subsurface.

4.5 User-Provided Information

Ramboll provided the client with a User Questionnaire (consistent with Appendix X3 of the ASTM Standard) that requested information relating to environmental liens, AULs, specialized knowledge of the site, site value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination, that was not otherwise provided to Ramboll. The user provided the information requested in the User Questionnaire; however, the client is unaware of any information beyond that obtained by Ramboll as part of the current assessment.

5. SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

During the site visit, observations of both the interior and exterior portions of the site were made to evaluate if any RECs, as defined in Section 7, are present. Ramboll did not observe the roof of the building.

5.2 General Site Setting and Observations

Ramboll made observations concerning all of the interior and exterior issues specified in Sections 9.4.2 through 9.4.4 of the ASTM E1527-13 Standard. The presence or absence of each issue of environmental interest or concern is noted in the table below. Additional information regarding observed and historical items is provided in the sections following the table.

Table 7: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
Interior and Exterior Issues		
9.4.2.1	Current use(s) of the property	See Section 3.2
9.4.2.2	Past use(s) of the property	See Section 4.2
9.4.2.3	Hazardous substances and petroleum products used, treated, stored, disposed of, or generated on the property in connection with identified present or past uses	**Present** (see Section 5.2.1)
9.4.2.4	Storage tanks: Underground storage tanks (fill ports, vent pipes, manholes) Aboveground storage tanks	(see Sections 5.2.2 and 5.2.3) Formerly Present Absent
9.4.2.5	Odors (strong, pungent or noxious)	Absent
9.4.2.6	Pools of liquid, standing surface water or sumps	Absent
9.4.2.7	Drums of hazardous substances or petroleum products (five-gallon, 55-gallon or totes)	**Present** (see Section 5.2.1)
9.4.2.8	Hazardous substance and petroleum product containers (not necessarily in connection with identified uses)	**Present** (see Section 5.2.1)
9.4.2.9	Unidentified substance containers suspected of containing hazardous substances or petroleum products	**Present** (see Section 5.2.1)

Table 7: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
9.4.2.10	Polychlorinated biphenyls (PCBs)	(see Section 5.2.4)
	Electrical equipment on-site (e.g., transformers, capacitors)	**Present**
	Electrical equipment known or likely to contain PCBs	Unlikely
	Hydraulic equipment on-site (e.g., elevators, truck dock lifts)	**Present**
	Hydraulic equipment known or likely to contain PCBs	Unlikely
Interior Issues		
9.4.3.1	Heating/cooling systems	**Present** (see Table 1)
9.4.3.2	Stains or corrosion on interior floors, walls or ceilings (except for staining from water)	**Present** (see Section 5.2.5)
9.4.3.3	Floor drains and interior sumps	**Present** (see Section 3.2.3)
Exterior Issues		
9.4.4.1	Pits, ponds or lagoons on property or adjacent sites	Absent
9.4.4.2	Stained soil or pavement	**Present** (see Section 5.2.6)
9.4.4.3	Stressed vegetation (from other than insufficient water)	Absent
9.4.4.4	On-site solid waste disposal; areas apparently filled or graded by non-natural causes; or mounds or depressions suggesting solid waste disposal	Absent
9.4.4.5	Wastewater or other liquid (including storm water) or any discharge into a drain, ditch, underground injection system or stream on or adjacent to the property	**Present** (see Section 3.2.3)
9.4.4.6	Wells (including dry wells, irrigation wells, injection wells, abandoned wells, or other wells)	Absent
9.4.4.7	Septic systems or cesspools	Absent
Non-Scope Considerations		
N/A	Asbestos Containing Materials	**Present** (see Section 5.2.7)
N/A	Lead-Based Paint	**Present** (see Section 5.2.8)

Table 7: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
N/A	Water Intrusion	**Present** (see Section 5.2.9)
N/A	Radon	**Present** (see Section 5.2.10)

Notes:

Observations noted in this table and discussed further below are based on information obtained during the site visit and from a review of the sources summarized in Section 4.

See the ASTM Standard for a detailed description of the issues included in each referenced ASTM section.

Per the ASTM Standard, fluorescent light ballasts likely to contain PCBs are not considered.

N/A – Not applicable.

5.2.1 Hazardous Substances and Petroleum Products

The primary chemicals used at the site include sanitizers and detergents in retail sales areas and beauty products (including bleaches, color developer, etc.) in the beauty salon and department. Except for one 55-gallon drum of hydraulic oil located in the freight elevator control room, chemical storage at the site is limited to retail-sized (less than five gallons) janitorial and maintenance-related products, such as hydraulic oil, paints, and sanitizers. Three unlabeled approximately 5-gallon containers were located near the emergency generator (currently broken) in the mechanical penthouse. Facility personnel had no knowledge of the contents or purpose of the containers, but assumed they were diesel fuel for the emergency generator. No evidence of significant release was observed in these areas. Chemicals are not stored in exterior areas of the site.

Facility personnel knew of no significant spills or releases of materials in chemical storage areas. While dedicated secondary containment was not provided for all of the drums and containers, Ramboll did not observe evidence of spills or uncontrolled releases from these storage areas, other than minor staining in some interior (i.e., chemical storage and maintenance area) and paved (i.e., loading dock and parking lot) areas. Staining did not appear to extend to floor drains, storm water drains or unpaved surfaces.

5.2.2 Aboveground Storage Tanks

No current or former ASTs were identified associated with the site. Although not considered an AST, the site operates a diesel generator that is equipped with a 24-gallon diesel fuel reservoir. Facility personnel did not identify any release associated with the diesel reservoir and no visual evidence of spills or uncontrolled releases was observed during Ramboll's site visit.

5.2.3 Underground Storage Tanks

No USTs are known to be present at the site, however, a total of five USTs were formerly located at the site in association with the former automotive shop operations and facility. Information regarding the removal of the USTs was not identified during this assessment.

5.2.4 Polychlorinated Biphenyls

Facility personnel knew of no on-site equipment that is known to contain polychlorinated biphenyls (PCBs). Three pad-mounted transformers are present on the property. The units are not labeled as to their PCB content. The two-story building is equipped with three hydraulic elevators. Facility personnel had no information regarding the hydraulic fluid contained in the elevator reservoir. Because the building was constructed in 1972, before the 1979 federal ban on the manufacture of PCBs, it is possible that the hydraulic fluid contained in the elevator reservoir contain PCBs. Facility personnel indicated that the elevators are serviced annually and within the past year. As such, it is likely that hydraulic fluid used in the building elevators in the early 1970s (and potentially containing PCBs) has been replaced and removed from the site.

Ramboll observed no indication of major leaks or releases from electrical equipment during the site visit.

5.2.5 Stains or Corrosion on Interior Floors, Walls, or Ceilings

Ramboll observed minor floor staining in the mechanical penthouse, fire pump room, loading dock area, and maintenance areas. This staining did not appear to be indicative of widespread releases or losses. Additionally, minor staining was observed in the vicinity of a floor drain located in the mechanical penthouse and appeared to be related the water treatment system for the chillers, but the exact source is unknown. Concrete floors in the vicinity of the staining appeared to be in good condition, with no evidence of cracking.

5.2.6 Stained Soil or Pavement

Ramboll observed evidence of minor pavement staining in the paved parking areas located north, east and south of the building. This staining is consistent with from minor drips from customer vehicles parked in this area. In addition, Ramboll observed minor pavement staining in the loading dock area. Pavement in the vicinity of the observed staining appeared to be in good condition, with no evidence of major cracking.

5.2.7 Asbestos Containing Materials

The building (1972) and parking structures (2000s) at the site were constructed prior to and after the time that asbestos was generally phased out of use in many building material applications during the mid-1980s. According to facility personnel, multiple asbestos abatements have been conducted in the past during renovation of the men's and junior's departments of the store. Exact dates and building materials removed during abatements are unknown. Additionally, given the date of construction of the building (1972) at the site, it is possible that other ACMs are present in building materials. In the event that renovation or demolition of structures is to occur in the future, a comprehensive (demolition-level) asbestos survey is required.

5.2.8 Lead-Based Paint

Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the building in 1972, it is likely that lead-based paint was used on facility structures. Facility personnel were not aware of the presence of any lead-based paint on structures at the facility, and Ramboll observed the paint to be in good condition.

5.2.9 Water Intrusion

Ramboll did not perform a mold survey at the site. Facility personnel reported that there had not been any past water intrusion events.

5.2.10 Radon

Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, out of 45 sites surveyed in San Mateo County, three sites were over 4 pCi/L. A USEPA survey conducted in the same zip code as the site found that the average radon level of a first floor room at two sites was 0.100 pCi/L.

6. FINDINGS, OPINION, AND CONCLUSIONS

Ramboll performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the site located at 1122 El Camino Real in San Bruno, California in June 2021. The objective of the ESA was to identify RECs, as defined in the ASTM Standard. A list of key definitions presented in the ASTM Standard is provided in Section 7 at the end of this report. Any exceptions to, or deletions from, this practice are described in Section 6.2.

6.1 Findings, Opinions, and Conclusions

6.1.1 Recognized Environmental Conditions

This assessment has revealed no evidence of recognized environmental conditions in connection with the site.

6.1.2 Other Findings

In addition to RECs discussed above, the following additional findings related to potential contamination concerns were identified:

- **Former USTs without Closure Documentation.** A total of five USTs were formerly located at the site in association with the former automotive shop operations. Three 10,000-gallon gasoline (one premium unleaded, one unleaded, and one regular) USTs were installed in 1972 and listed as being last used in 1983. One 500-gallon waste oil tank was installed in 1972 and listed as being active. Additionally, one 550-gallon waste oil UST with an unknown installation date is also listed as being active. Facility personnel indicate there are no active USTs on site but had no knowledge regarding the historical UST closure process(es) prior or during the demolition of the automotive operations building in 2005, and closure documentation is not available from other resources reviewed for this assignment. Regulatory database search results do not identify any continuing obligations related to the closure of the USTs. Because Ramboll's review did not identify documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product related to this matter, it is not considered a REC; however, additional information (e.g., confirmatory sample data) would be required to evaluate the potential for subsurface impacts, if any, related to the operation of USTs at the site.
- **Past Operations at the Site.** The site has been used for various purposes since the late 1890s, including as a horse, dog, motorcycle and automotive race track (1899-1964), military training and operations (1914-1918, 1941-1950), internment camp operations (1942), automotive shop operations (1972–2005), and retail operations (1972–present). Several of these former operations may have included the use of petroleum products, solvents, adhesives, paint, metals, acids, caustics, corrosives, explosives, propellants, lead, and other chemicals. Additionally, historical operations conducted between site development and the early 1980s predate the enactment of robust environmental regulations related to the handling, storage, and disposal of hazardous chemicals. No subsurface characterization activities are known to have been conducted at the site. Ramboll's review did not identify documentation of a release. Facility personnel are not aware of any major spills or releases at the site and there is no current regulatory scrutiny related to contamination matters at the site.

6.1.3 De Minimis Conditions

De minimis conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the

attention of appropriate governmental agencies. Ramboll identified the following *de minimis* conditions related to the site:

- **Pavement and Floor Staining.** Ramboll observed multiple areas of exterior pavement and interior flooring where oil stains were apparent. The stains were limited in areal extent, the underlying pavement/flooring appeared to be intact, and no stains appeared to reach floor drains or storm water drains. As such, Ramboll considers this matter to represent a *de minimis* condition.

6.1.4 Non-Scope Considerations

Ramboll identified the following finding that relates to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Asbestos-Containing Materials (ACMs).** The building (1972) and parking structures (2000s) at the site were constructed prior to and after the time that asbestos was generally phased out of use in many building material applications during the mid-1980s. According to facility personnel, multiple asbestos abatements have been conducted in the past during renovation of the men's and junior's departments of the store. Exact dates and building materials removed during abatements are unknown. Additionally, given the date of construction of the building (1972) at the site, it is possible that other ACMs are present in building materials. In the event that renovation or demolition of structures is to occur in the future, a comprehensive (demolition-level) asbestos survey is required.
- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the building in 1972, it is likely that lead-based paint was used on facility structures. Facility personnel were not aware of the presence of any lead-based paint on structures at the facility, and Ramboll observed the paint to be in good condition.
- **Water Intrusion/Mold.** Ramboll did not perform a mold survey at the site. Facility personnel reported that there had not been any past water intrusion events.
- **Radon.** Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, out of 45 sites surveyed in San Mateo County, three sites were over 4 pCi/L. A USEPA survey conducted in the same zip code as the site found that the average radon level of a first floor room at two sites was 0.100 pCi/L.

6.2 Analysis of Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Facility personnel did not have current contact information for representatives of former site owners/occupants. Thus, Ramboll was unable to interview former owners/occupants about historical operations and site conditions.
- During the site visit, Ramboll did not observe the roof of the building due to access and safety constraints.
- Historical information, such as aerial photographs, was not readily available to characterize the property from the present back to the property's obvious first developed use or 1940, whichever is earlier. The earliest readily available historical source that would indicate specific site uses is a Sanborn Map dated 1925, which shows the site was already developed as the Tanforan Race Track.
- Lack of information (e.g., confirmatory sample data) necessary to evaluate the potential for subsurface impacts, if any, related to operation of the former USTs.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above are considered to represent significant data gaps.

7. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

REC - Recognized Environmental Condition:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

CREC - Controlled Recognized Environmental Condition:

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

HREC - Historical Recognized Environmental Condition:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

***De minimis* Condition:**

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Data Gap/Significant Data Gap:

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap is significant if other information and/or professional experience raises concerns involving the data gap.

Please note that the term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

1. SUMMARY OF CONCLUSIONS

Ramboll US Consulting, Inc. (Ramboll) was retained by Alexandria Real Estate Equities, Inc. (ARE or "the Client") to perform a Phase I Environmental Site Assessment (ESA) of the site located at 1150 and 1178 El Camino Real in San Bruno, California (herein referred to as the "facility" or the "site"). Ramboll's assessment was conducted in connection with a potential purchase of the site. The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the "ASTM Standard"), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard (see Section 7).

1.1 Site Summary

The northeastern section of The Shops at Tanforan, specifically the Sears building and former Sears Automotive Center are owned by Seritage Growth Properties. This approximately 11-acre site is improved with an approximately 84,800 square-foot department store, which is connected to the rest of The Shops at Tanforan (the "shopping mall building") to the southwest and the approximately 20,350 square-feet auto center, a standalone building. The Sears department store and Sears Automotive Center are located at 1150 and 1178 El Camino Real, respectively. The Sears building is a three-story retail building, located on the northeast section of the shopping mall on its own parcel of land. There are two incorporated parking lots surrounding that section of the shopping mall, located north and west of the Sears building. Separate from the Sears building is the former Sears Automotive Center, which has a main floor and a basement floor, and it is located in the northeast section of the same parcel. Both buildings are largely vacant; Seritage leases the front of the first story section of the Sears building to Spirit Halloween, LLC, for seasonal retail.

The site was developed with the southern portion of the Tanforan Race Track ("Race Track") in 1899. The Race Track was temporarily converted into a United States military training center from 1914 to 1918 and again from 1941 to 1950, a use that included an internment camp in 1942. Structures associated with the Race Track were destroyed in a fire in 1964. The Sears building was constructed in 1969, and automotive center building was constructed in 1972. Sears operated the facility as a retail department store and automotive center until vacating the site in 2020.

1.2 Recognized Environmental Conditions

This assessment has revealed the following REC related to potential contamination concerns:

- **On-Site Groundwater and Soil Contamination Related to Historical Operations at Site.** The Sears Automotive Center formerly operated seven underground storage tanks (USTs) for the storage of gasoline (two 12,000-gallon and two 6,000-gallon), motor oil (two 530-gallon), and used oil (500-gallon). Following removal of the USTs between 1985 and 1987, investigations commenced to evaluate and delineate the extent of petroleum hydrocarbons in soil and groundwater beneath the site. Under the oversight of the San Mateo County Department of Environmental Health (SMCDEH), investigations continued into the 2000s and have included soil, groundwater, and soil vapor sampling, and the installation and periodic sampling of groundwater monitoring wells. In a letter dated March 15, 2013, SCMDEH stated that active remediation was not warranted for the former gasoline and oil USTs and the agency has not requested additional investigation of this area of the site since approximately that time. This was verified in an October 21, 2021 phone call with SMCDEH case worker, Brian Gwinn.

  In addition to the Sears Automotive operation, an eighth UST was discovered in 2001 during construction of the San Bruno Police Station located at a property adjacent to the southeast side

of the site (the adjacent property is owned by Bay Area Rapid Transit [BART]). BART contractors discovered a 100-gallon UST of unknown type and at a depth of approximately 16 feet in or adjacent to the excavation for the police station. This area is referred to as Anomaly E in correspondence and reports and appears to be a source area for petroleum and benzene impacts in the subsurface.

Agency correspondence states the tank was found in the basement area of the current police station. SMCDEH named BART as an additional responsible party in 2013, and BART has performed investigation and remediation of the area since that time. Investigation activities have included sampling and analysis of soil, soil vapor, indoor air, and groundwater, and periodic groundwater monitoring. Following a 2015 pilot test and preparation of a 2017 work plan, BART implemented a dual phase extraction (DPE) remedial program from August 22, 2019 through September 24, 2019 to remediate the source area at Anomaly E. Post remedial groundwater sample results indicate that benzene concentrations in groundwater monitoring wells were reduced by one to two orders of magnitude but remain above commercial/industrial screening criteria, and the trend of cumulative contaminant mass removal did not reach asymptotic conditions, signifying that the system may have been shut down prematurely.

Based on a September 22, 2021 letter and October 21, 2021 phone call with Mr. Gwinn, the SMCDEH requested an additional post-remedial groundwater monitoring event (inclusive of all wells on the site and in the vicinity of Anomaly E), and indicated that if results demonstrate a sustained reduction in groundwater contaminants, further remedial effort may not be necessary. In that scenario, the agency suggested that the case, which includes Sears Automotive (a portion of the site) and Anomaly E (located on BART property), may qualify for closure under the State Water Resources Control Board (SWRCB) Low-Threat Underground Storage Tank Case Closure Policy.

The presence of petroleum hydrocarbons and benzene in groundwater beneath the site at concentrations above current regulatory screening criteria constitutes a REC. It is not expected that site redevelopment would be inhibited in a significant manner by the identified issues. Irrespective of case status with the oversight agency, residual impacts present at this site are likely to be managed as part of redevelopment and construction, continued coordination with the agency, and the implementation of a soil management plan.

1.3 Notable Other Findings

Although not considered a REC, Ramboll identified the following notable other findings. The term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM standard.

- **Past Operations at the Site.** The site has been used for various purposes since the late 1890s, including as a horse, dog, motorcycle and automotive racetrack (1899-1964), military training and operations (1914-1918, 1941-1950), internment camp operations (1942), automotive shop operations (1972–2020), and retail operations (1972–present). Several of these former operations may have included the use of petroleum products, solvents, adhesives, paint, metals, acids, caustics, corrosives, explosives, propellants, lead, and other chemicals. Additionally, historical operations conducted between site development and the early 1980s predate the enactment of robust environmental regulations related to the handling, storage, and disposal of hazardous chemicals. With the exception of the current remedial activity occurring at the Sears Automotive Center, facility personnel are not aware of any major spills or releases at the site.

1.4 Non-Scope Considerations

Ramboll identified the following finding that relates to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Asbestos-Containing Materials (ACMs).** The buildings (1969 and 1972) at the site were constructed prior to the time that asbestos was generally phased out of use in many building material applications during the mid-1980s. According to facility personnel, multiple mobilizations for asbestos abatement have been conducted in the past, including during renovation of the site in 2005. Exact dates and building materials removed during abatement are unknown, and ACM-related documentation was not available for review during this assessment. Additionally, given the date of construction of the buildings at the site, it is possible that other ACMs are present in building materials. In the event that renovation or demolition of structures is to occur in the future, a comprehensive (demolition-level) asbestos survey is required. This section will be updated with the results of a forthcoming visual and limited survey regarding the presence of ACM at the site.
- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the buildings in 1969 and 1972, it is likely that lead-based paint was used on facility structures. Facility personnel were not aware of the presence of any lead-based paint on structures at the facility, and Ramboll observed the paint to be in good condition.
- **Water Intrusion/Mold.** Ramboll did not perform a mold survey at the site. Facility personnel reported that there had not been any past water intrusion events with the exception of roof leaks at the Sears department store that were immediately repaired, same day. No other information was available.
- **Radon.** Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, out of 45 sites surveyed in San Mateo County, three sites were over 4 pCi/L. A USEPA survey conducted in the same zip code as the site found that the average radon level of a first-floor room at two sites was 0.100 pCi/L.

2. INTRODUCTION

2.1 Purpose

Ramboll was retained by ARE to conduct a Phase I ESA of the site in connection with a potential financial transaction. The purpose of the assessment was to identify RECs, which are defined in the ASTM Standard as:

> "The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions."

2.2 Scope of the Assessment

Ramboll completed the following tasks, consistent with the ASTM Standard, during its Phase I ESA of the site:

- A visit to the site by Katie Zheng and Timothy Grant of Ramboll on October 5, 2021, to observe the exterior and interior features of the site and to identify the uses and conditions specified in Sections 9.4.1 through 9.4.4.7 of the ASTM Standard. In addition, Ramboll observed the adjoining properties from the site or adjacent public thoroughfares. Photographs taken during the site visit are presented in Appendix A.
- An interview during or prior to the site visit with John Puamau, Operations Manager with CBRE Property Management and affiliated with the site since 2012. The aforementioned individual is referred to herein as "facility personnel". The facility personnel interviewed by Ramboll were identified by the Company as having good knowledge of the uses and physical characteristics of the site.
- A review of a radius report prepared by Environmental Data Resources, Inc. (EDR, see Appendix B), which presents the results of searches of federal and state databases for the site, as well as properties near the site. The radius searched for each database, as well as the databases themselves, were selected in accordance with the ASTM Standard.
- A review of information contained in federal and state environmental databases, as obtained from the sources noted below:
  - The United States Environmental Protection Agency's (USEPA's) EnviroFacts database, which provides site information contained in multiple USEPA regulatory databases.
  - The Department of Toxic Substances Control (DTSC) EnviroStor database, which contains information about certain regulated facilities in California.
  - The State Water Resources Control Board (SWRCB) GeoTracker database, which contains information about groundwater contamination and clean-up sites in California
  - The California Geologic Energy Management Division (CalGEM), which contains information regarding oil and gas wells on and in the site vicinity
  - The DTSC Hazardous Waste Tracking System (HWTS), which contains hazardous waste manifest information reported to CalEPA.

- A review of standard historical sources (included as Appendix C) and local agency inquiries, as defined in the ASTM Standard. The following resources were reviewed:
  - Readily available historical sources, including (where available) historical topographic maps and aerial photographs, city directories, and Sanborn Maps, to develop a history of the previous uses of the site and surrounding area.
  - Historical and site-specific information obtained from the following local agencies: the San Mateo County Assessor's Office (Assessor). Ramboll also requested information from the Department of Toxic Substances Control (DTSC), Regional Water Quality Control Board (RWQCB), San Bruno Fire Department (Fire Department), the City of San Bruno Building Division (Building Department), and the San Bruno Public Services Administration's Public Works Department (Public Works Department) but the agencies did not have any records pertaining to the site. Additionally, Ramboll contacted the SMCDEH; however, a response had not been received at the time this report was completed (some of the records on file with SMCDEH are expected to be duplicative of those reviewed on Geotracker [description below]).
  - A telephone interview on October 21, 2021 with SMCDEH personnel regarding an active environmental oversight case for the site.

  A review of physical setting sources, as defined in the ASTM Standard, including:
  - The current United States Geological Survey (USGS) 7.5-minute topographic map that shows the area on which the site is located.
  - Geologic, hydrogeologic, or hydrologic sources as provided in the environmental database report.
- Ramboll reviewed prior environmental documentation obtained from the State Water Resources Control Board's GeoTracker website. All prior reports reviewed by Ramboll are attached as Appendix D. A complete list of documents Ramboll reviewed includes the following reports:
  - *Site Conceptual Model and Additional Screening Indoor Air Quality Monitoring Workplan, 1178 El Camino Real, San Bruno, California,* prepared by SCS Engineers, dated December 7, 2011;
  - *2018 First Semi-Annual Groundwater Monitoring Report, Sears Automotive Service Center (No. 1478), 1178 El Camino Real, San Bruno, California,* prepared by AECOM, dated May 21, 2018;
  - *Corrective Plan Implementation Report, Sears Automotive Service Center (No. 1478). Separate Source of Hydrocarbons in the Vicinity of the San Bruno Police Station, 1178 El Camino Real, San Bruno California,* repared by AECOM, dated April 28, 2020; and
  - *Separate Source of Hydrocarbons in the Vicinity of the San Bruno Police Station, Sears Automotive Center #1478, 1178 El Camino Real, San Bruno, California,* prepared by SMCDEH, dated September 22, 2021.
- A search for environmental liens or other activity and use limitations (AULs) for the site, provided by the third-party database provider (as shown in Appendix E). Ramboll ordered the lien search using the parcel number believed to be associated with the site, as obtained from the local tax assessor's office and other online resources.
- A review of any information provided by the user of this assessment, including information consistent with Appendix X3 of the ASTM Standard. Pertinent information, if any, is discussed in the appropriate sections of this report.

This assessment was conducted in accordance with the methodology specified in ASTM Standard E1527-13, as agreed upon by Ramboll and the Client in June 2021. The standard ASTM scope was expanded to include a limited review of asbestos-containing materials, lead-based paint, water intrusion, and radon.

2.3 Significant Assumptions

In conducting this review, no significant assumptions were made, except for the following:

- Site-specific field measurements or other detailed hydrogeological information was not publicly available or reasonably ascertainable. In the absence of such data, Ramboll has assumed that the flow direction of shallow groundwater beneath the site and in the local vicinity generally mimics surface topography. Therefore, in evaluating potential on-site impacts from off-site sources, those off-site facilities not located adjacent to or within one-quarter mile upgradient of the subject site are not considered to represent a significant concern to the site. This interpretation is based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, although a hazardous material can migrate in the groundwater in a generally downgradient direction. There are, however, limits to this interpretation.

2.4 Reliance and General Limitations

This report has been prepared for the exclusive use of ARE and its affiliated entities and may not be relied upon by any other person or entity without Ramboll's prior express written permission.

This report is considered current only for a period of 180 days from the site inspection. The conclusions presented in this report represent Ramboll's professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll must rely upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, the conclusions in this report are valid only to the extent that the information provided to Ramboll was accurate and complete. This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility compliance. Ramboll makes no representations or warranties, expressed or implied, about the conditions of the site.

Ramboll's scope of work for this assignment did not include collecting samples of any environmental media. As such, this review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll's review; however, this report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

The scope of work for this assessment did not include an asbestos survey or inspection. According to federal OSHA regulations (29 CFR §1910.1001) and the Model Accreditation Plan (MAP; 40 CFR Part 763, Subpart E, Appendix C), the inspection, testing, evaluation, and/or sampling of suspect asbestos-containing materials must be conducted by an accredited inspector; these activities were not performed as part of this environmental review. Comments in this report regarding the condition of building materials at the site, including materials typically considered suspect ACM, represent only Ramboll's observations at the time of the site visit and are not intended to be consistent with definitions regarding ACM condition in the Asbestos Hazard Emergency Response Act (AHERA) or in other federal or state asbestos regulations or industry standards.

Other issues considered outside the scope of the ASTM Standard and this review include lead in drinking water, polychlorinated biphenyls (PCBs) in building materials, cultural and historic resources, ecological resources, endangered species, and high voltage power lines.

However, Ramboll evaluated: the potential for asbestos and lead-based paint to be present in building materials based solely on the age of the buildings, the potential for radon and wetlands to be present in the vicinity of the site based on information provided by EDR, and the potential for water intrusion to have taken place at the building based on limited visual observations and information provided by facility personnel.

3. SITE DESCRIPTION

3.1 Site Setting

The site is owned by Seritage Growth Properties. This site is located approximately 10 miles south of San Francisco, California (Figure 1). The Sears department store building and Sears Automotive Center are identified as addresses 1150 and 1178 El Camino Real in San Bruno, California, respectively. According to the Assessor's Office, assessor's parcel number (APN) for the site is 014-316-330.

The Sears building is a three-story, approximately 84,800 square-foot-in-area retail building, located on the northeast section of the shopping mall. There are two incorporated parking lots surrounding that section of the shopping mall to the north and west. The former Sears Automotive Center, a standalone building, is located in the northeast section of the parcel. It is approximately 20,350 square feet with a main floor and basement floor, and it is surrounded by parking lots to the south and north. Both buildings are largely vacant; Seritage leases the front, first story section of the Sears building to Spirit Halloween, LLC, for seasonal retail. The eastern section of the parcel includes an area that is not part of the site for this assessment: 1188 El Camino Real (occupied by the Century movie theater) is a separate parcel and property that is surrounded on all sides by the site.

The site is accessed primarily from El Camino Real at the western site boundary, Huntington Avenue at the eastern site boundary, and Sneath Lane to the north. Customer and employee parking areas are present to the east, south, and west of the building, and delivery truck access to the bottom floor loadings docks were provided to the north of the building. There are no on-site surface water bodies.

Table 1 provides an overview of physical setting and utility information for the site.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map; Google Earth	Ranges from approximately 51 feet near the northwestern corner to 31 feet along the northeastern corner of the site.
Topographic Gradient	USGS topographic map; visual observations	Relatively flat on site, with a slight downward slope to the east/northeast. Regional topography slopes gently downward to the east.
Hydrology		
Storm Water Runoff	Visual observations	Enters street drains and catch basins that discharge to the municipal storm sewer system.
Nearest Surface Water Body to the Site	USGS topographic map; Visual observations	San Bruno Canal, located approximately 2,800 feet to the east at its nearest point. The Canal ultimately discharges to the San Francisco Bay, located approximately 1.6 miles to the east of the site.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Flood Plain	FEMA*; Facility personnel;	Facility personnel reported no known occurrences of flooding at the site. The site is not located within a 500-year flood zone.
Wetlands	NWI*	There are no federally designated wetlands on site. Federally designated wetlands are located approximately one-half mile east of the site.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map; 2018 First Semi-Annual Groundwater Monitoring Report, Sears Automotive Center, 1178 El Camino Real, San Bruno, California	Based on the topographic gradient, shallow groundwater likely flows east to northeast, toward the San Francisco Bay. A 2018 groundwater monitoring report for the site indicates that groundwater flows north to north-northeast.
Depth to Groundwater	2018 First Semi-Annual Groundwater Monitoring Report, Sears Automotive Center, 1178 El Camino Real, San Bruno, California	Based on groundwater monitoring conducted at the site in 2018, groundwater was encountered at approximately 18 to 20 feet bgs.
On-site Wells	Facility personnel; Visual observations	There are nine groundwater monitoring wells on site.
Nearest Groundwater Supply Wells	Database report	One federally registered well, which is registered as a public supply well, is present more than a half a mile southeast of the site. Approximately four private or municipal wells that may be used for water supply are located within approximately one mile south and west of the site.
Geologic Conditions	NCSS*	Regional soils are urban land with very slow infiltration rates.
Site Utility Information		
Heating and Cooling Equipment	Facility personnel	Natural-gas fired heating units supply building heat. The building is cooled with air conditioning units.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Electricity Supplier	Facility personnel	Pacific Gas and Electric (PG&E)
Natural Gas Service	Facility personnel	PG&E
Use of Fuel Oil for Building Heat	Facility personnel	No known current or former use of fuel oil for building heat.
Water Supply	Facility personnel; City Website	City of San Bruno
Sanitary Sewer	Facility personnel	The site is connected to the municipal sanitary sewer system maintained by the City of San Bruno
Septic Systems	Facility personnel	No identified current or former septic systems.

Notes:

FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey; NWI = National Wetlands Inventory

* - Source was provided in the environmental database report.

3.2 Current Use of Site

3.2.1 Current Operations

Sears vacated the Sears building in 2020; it is currently predominantly vacant and no longer in use, with the exception of a temporary Spirit Halloween shop that occupies a quarter of the main floor space. Janitorial supplies are limited, as the seasonal shop maintains only spray bottles for surface cleaning. A mechanical room, boiler, and chiller system is located on the eastern and southeast section of the Sears building. In addition to these systems, a water purification system is located to the left of the chillers, and it utilizes a 55-gallon drum of water treatment chemical to minimize corrosion in the system's coils.

The Sears Automotive Center is no longer in operation and closed in February 2020. The building has a main floor and basement floor and was primarily used as a car servicing center. Within the Sears Automotive Center, there are two freight elevators and an ADA accessibility lift In the basement, the building houses two unlabeled above-ground tanks that appear to have been used for new motor oil and waste oil.

3.3 Current Uses of Adjoining Properties

The site is located in a mixed residential/commercial land use area. The nearest residential area is located approximately 360 feet east (downgradient) of the site. Based on discussions with facility personnel, Ramboll's visual observations from the site boundary and nearby roads, and a limited review of publicly available information, a general evaluation of the current use of adjacent properties was developed, as described Table 2.

Table 2: Current Use of Adjacent Properties
