By World War I, a national department store industry was in place, comprised of individual merchants, department store executives, and their trade organizations. The development of department stores as major economic drivers and one-stop shops benefited from and helped drive urban growth from the late nineteenth to early twentieth centuries (Howard 2015:3). In addition, as early as the 1930s, standardization of department stores transformed local retail stores into national chains (large companies with numerous retail locations across the country) with product and aesthetic uniformity (Hardwick 2004:3).

Department stores evolved with the major suburbanization movements that occurred after World War II. Department store popularity helped shift shopping, a reflection of economic prosperity, from downtown cores. (Howard 2015:3). After World War II, retail developments increased in size and scale as malls and urban renewal plans utilized larger areas of land, and retail shopping among middle-class Americans grew exponentially. In the 1950s, suburban growth and the ubiquity of automobiles shifted the seat of economic prosperity from department stores located in urban areas to suburban areas, and the development of the regional shopping center typology began. With the 1956 opening of the Southdale Center in Edina, Minnesota, the architect Victor Gruen's designs developed the concept of what came to be the suburban mall: indoor, climate-controlled retail "anchored" by department stores and adjacent to a variety of stores. (Gruen's contributions to the property type and role as the subject property's architect are described in more detail below.) Anchor department stores, as they came to be known, were popular national department stores meant to draw their existing consumer base to the regional shopping center (Lange 2022:44). Regional shopping centers of the 1950s and 1960s were characterized by enormous complexes (often 60 or more acres), buildings encircled by parking lots capable of holding anywhere between 3,000 and 8,000 cars, and unorthodox building configurations with stores opening outward toward landscaped, pedestrian walkways (Longstreth 2010:186). Following Gruen's prototype, the

shopping center typology was copied and evolved in suburban areas across the country from the mid-1950s to the 1970s. By the 1970s, the regional shopping center typology was developing into the "mall" with a multi-level, inward-facing enclosed space with an average of two-anchor department stores and a mix of commercial tenants (Comras 2018). As a regional shopping center constructed in the mid-1970s, The Shops at Tanforan is a late example of this regional shopping center type.

A substantial number of large-scale mergers of department store chains took place in the 1980s, following the expansion of department store national chains and the development of the regional shopping center typology. The consolidation of companies coincided with the loss of historic department stores in both small towns and urban centers throughout the late twentieth century. San Francisco and New York are among the few cities that maintained historic central commercial districts with long-standing department stores. Most other downtowns have lost their department stores and have transitioned into leisure and tourism centers. Generally, the number of department stores in urban areas lessened as the number of regional shopping centers in suburban areas rose in the mid-twentieth century. By the late twentieth century, regional shopping centers, like its predecessors, were eclipsed by a new retail building typology in American retail's evolution: the discount big-box store (Howard 2015:3-4).

3.3 Developer: Hapsmith Company

After a complex turnover of landownership and rejected project proposals and permits, the Hapsmith Company purchased the vacant site that became The Shops at Tanforan. Hap Smith was a well-known Beverly Hills developer and President of the Hapsmith Company. The Shops at Tanforan was the fifth of Hapsmith's 10 planned major shopping centers in Northern California. Others included Fremont, Santa Clara, Sacramento, and San Jose (*San Mateo Times* 1968b:40). Smith employed the services of architect Victor Gruen and the Ernest W. Hahn Construction Company for contracting work (*San Mateo Times* 1968b:40). The first anchor store to commit was Sears, Roebuck, and Co. (*San Mateo Times* 1968b:40). JCPenny and Emporium department stores were the other two department stores to commit soon after 1970 (*San Mateo Times* 1970:29).

3.4 Architect: Victor Gruen

Victor Gruen (1903-1980) was born Viktor David Grünbaum in Vienna, Austria, and changed his name to Victor David Gruen in late 1938 after emigrating to the United States (Pacific Coast Architecture Database [PCAD] 2023). Victor Gruen's architectural career in the United States spanned from his arrival in Manhattan in 1938 to his return to Vienna in 1968, consistently traveling between New York, Vienna, and Los Angeles in the interim decades (Hardwick 2004:6). In addition to his architectural career, Gruen published three books regarding design and retail—Shopping Towns USA (1960), The Heart of Our Cities (1964), and Centers for the Urban Environment (1973)— and wrote hundreds of articles and presented numerous speeches on consumerism, architecture, urban planning, and more (Hardwick 2004:5). Gruen's first architectural commission in the United States was completed in association with architect Morris Ketchum. The project was a design for a new department store for the Lederer Company in New York City and was completed in 1939 (Comras 2018; Heiss 2010). Throughout the 1940s, Gruen partnered with his wife Elsie Krummeck, an interior designer, on retail designs in Los Angeles. The pair designed 11 branches of the California clothing chain Grayson's, several department stores for R. H. Macy's, Joseph Magnin,

and Milliron's, and commercial buildings for Tishman (Comras 2018). The office of Gruen-Krummeck dissolved with the couple's divorce in 1951, and Gruen founded his own architecture and planning firm, Victor Gruen Associates, the same year (PCAD 2023).

Following World War II, Gruen and his store modernization theories proliferated across the country and facilitated a new standardization of commercial aesthetics. Gruen's national catalog included large regional shopping centers in suburban areas and, later, ambitious urban renewal projects. The latter projects were in opposition to his earlier work as a result of his distaste for the realities of suburban sprawl and the ubiquitous regional shopping center typology's transformation by developers and various economic and cultural factors (Hardwick 2004:3). In the early 1950s, Gruen designed an open-air shopping center called Northland near Detroit, Michigan. J. L. Hudson, a local, upscale department store chain, developed the shopping center. Northland was designed to be the physical center within surrounding homes, offices, hotels, and stores. J. L. Hudson enforced controls over Gruen's design and quality assurance of an original sculpture installation (Comras 2018).

Gruen's developing vision for the regional shopping center concept in the 1950s was more than just retail stores. He imagined them as mixed-use facilities, with apartments, offices, medical centers, childcare facilities, libraries, and even bomb shelters. In 1952, the Dayton Company commissioned Gruen to build the first indoor, climate-controlled shopping center in Edina, Minnesota. The resulting Southdale Center opened in 1956 and featured a massive center court covered in a skylight and a mix of local stores. The resulting design did not feature the mixed-use ideals of Gruen's theories nor the ornate storefronts and window displays of his early career. Instead, the Southdale Center had an amorphous, boxy massing, only a few exterior windows, and unadorned exterior walls, drawing focus to a pedestrian-focused interior space. Gruen's subsequent malls were mostly based on the Southdale Center design, and features like the center court became a standard feature of the shopping mall building typology (99% Invisible 2015).

During Gruen's active professional decades, retail and commercial architecture evolved substantially. Gruen's designs exploited this commercial environment to draw in customers and keep them in the store for as long as possible, theorizing that the longer a consumer spent entertained in a retail space, the more money they would spend. Thus, Gruen's store designs utilized artificial lights, large windows, and contained displays and opulent facades; Gruen's larger regional shopping center typology included grand fountains, intricate sculptures, and gardens (Hardwick 2004:4).

Chapter 4
Evaluation

4.1 NRHP Eligibility

The following section evaluates the property to determine whether it meets the eligibility criteria for listing in the NRHP for the purposes of CEQA review (NPS 1995:2). To be eligible for listing in the NRHP, a property must demonstrate significance under one or more of the following criteria:

- **Criterion A (Event):** That are associated with events that have made a significant contribution to the broad patterns of our history; or
- **Criterion B (Person):** That are associated with the lives of persons significant in our past; or
- **Criterion C (Design/Construction):** That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- **Criterion D (Information Potential):** That have yielded, or may be likely to yield, information important in prehistory or history.

In addition, a property must retain integrity to be eligible for listing in the NRHP. Integrity is the measure by which a property is evaluated based on the property's ability to convey its historical significance. To retain integrity, a property must have most of the seven aspects of historic integrity as defined by the NRHP: location, design, materials, workmanship, setting, association, and feeling.

4.2 CRHR Eligibility

The following section evaluates the property to determine whether it meets the eligibility criteria for listing in the CRHR for the purposes of CEQA review. These evaluative criteria are closely based on those developed by the NPS for the NRHP. To be eligible for listing in the CRHR, a property must demonstrate significance under one or more of the following criteria:

- **Criterion 1 (Events):** Resources that are associated with events that have made a significance contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States.
- **Criterion 2 (Persons):** Resources that are associated with the lives of persons important to local, California, or national history.
- **Criterion 3 (Design/Construction):** Resources that embody the distinctive characteristics of a type, period, region, or method of construction, or represent the work of a master, or possess high artistic values.
- **Criterion 4 (Information Potential):** Resources that have yielded, or have the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

In addition, a property must retain integrity to be eligible for listing in the CRHR. Integrity is the measure by which a property is evaluated based on the property's ability to convey its historical significance. To retain integrity, a property must have most of the seven aspects of historic integrity as defined by the NRHP and adopted by the CRHR: location, design, materials, workmanship, setting, association, and feeling.

4.2.1 Criterion 1 (Events)

To be considered eligible for listing under NRHP/CRHR Criterion A/1, The Shops at Tanforan would need to be directly associated with one or more important events in a defined historic context. The Shops at Tanforan does not appear to be associated with any event(s) significant to the twentieth-century history and commercial development of San Bruno, the regional shopping center property type, the evolution of the Tanforan site, or local state, or national history more broadly. Initially constructed between 1970 and 1975, The Shops at Tanforan was one of numerous commercial enterprises in San Bruno and one of at least two regional shopping centers of its kind—including the Bayhill Shopping Center, which had its grand opening in 1974. The Shops at Tanforan was one of 10 planned developments by the Hapsmith Company in Northern California and one of many in a national construction boom of regional shopping centers in the 1960s and 1970s (*San Mateo Times* 1968b:40). The Shops at Tanforan was a ubiquitous example of its building typology, the regional shopping center, which emerged in the post-World War II period. The construction of the regional shopping center property type paralleled residential patterns of suburban sprawl and was common in suburban areas such as San Bruno and across California and the United States. The Bayhill Shopping Center similarly serviced San Bruno within a decade of increased commercial development. Regional shopping centers were notably plotted on large lots, catering to automotive convenience in residential areas. Notably centered around surface-level parking and adjacent to the El Camino Real thoroughfare and residential developments to the east and south, The Shops at Tanforan did not play an important role in the commercial development of San Bruno, nor the region, state, or country. It merely followed established patterns of commercial retail development in the post-World War II era. The Shops at Tanforan appears to represent an unremarkable pattern of commercial lot development that occurred throughout San Bruno, California, and the country in the mid-to-late twentieth century.

The Shops at Tanforan site has a complex history and was developed with other uses before the current regional shopping center was constructed. The site was previously the Tanforan Racetrack, with use as a racetrack, aviation event space, Japanese-American assembly or detention center during World War II, and naval base. The current site does not reflect these historic uses. Instead, The Shops at Tanforan was constructed in a complete redevelopment of the site in the 1960s and 1970s that removed all physical remnants of the site's history. In the past 20 years, memorials and statues have been installed around the site boundaries to reflect this history and are therefore not historic age. Thus, The Shops at Tanforan does not appear to be associated with or a contributor to important single events, patterns of events, repeated activities, or historic trends in local, state, or national history; instead, it appears to have contributed to the everyday community and commercial life after redevelopment in the 1970s. As such, The Shops at Tanforan does not appear significant under NRHP/CRHR Criterion A/1.

4.2.2 Criterion 2 (Persons)

To be considered eligible for listing under NRHP/CRHR Criterion B/2, The Shops at Tanforan would need to be directly associated with the productive life of a person considered historically significant at the local, state, or national level and the place where that person performed the work for which they are best known. The shopping center has a broad and unremarkable association with local community life and economic patterns through a series of revolving tenants with food and general commercial storefronts. Through the range of tenants, no associations were made to rise to a level of significance as most were one among many locations of regional or national companies. Newspaper research and similar online repositories yielded no evidence of persons or events within previous tenant businesses exclusively associated with The Shops at Tanforan. Finally, no evidence suggests that the building housed activities that allowed a particular owner, tenant, or employee to achieve the historical significance that the shopping center would best convey. As a result, The Shops at Tanforan is not associated with the lives of persons important in our past and, therefore, does not appear significant under NRHP/CRHR Criterion B/2.

4.2.3 Criterion 3 (Design/Construction)

To be considered eligible for listing under NRHP/CRHR Criterion C/3, The Shops at Tanforan would need to meet at least one of the following requirements: embody distinctive characteristics of a type, period, or method of construction; represent the work of a master; possess high artistic value; or represent a significant and distinguishable entity whose components may lack individual distinction. Each requirement is addressed below.

The Shops at Tanforan does not embody the distinctive characteristics of a type, period, region, or method of construction. The Shops at Tanforan's original design and layout are generic to the regional shopping center building typology of its period. These feature a large complex of a primary building encircled by parking lots, irregular building configurations with stores opening outward toward landscaped, pedestrian walkways, an enclosed, multi-level space, three anchor department stores, and a mix of commercial tenants. The Shops at Tanforan was one of many regional shopping centers built in the middle of a period of commercial development in suburban areas in the generic form and aesthetics of regional shopping centers. It was neither the first nor the most representative of a new building typology. Gruen's Southdale Center in Edina, Minnesota, was the first property to embody the regional shopping center typology and established the characteristics of the type as a commercial development that united retailers and department stores within one development located in a suburban enclave. In contrast, The Shops at Tanforan reflect a local and undistinguished example of a ubiquitous building typology constructed in the mid-twentieth century.

Furthermore, The Shops at Tanforan does not represent the work of a master design professional or important creative individual, according to NPS and CRHR standards, respectively. The NPS defines this standard in the following manner.

A master is a figure of generally recognized greatness in a field, a known craftsman of consummate skill, or an anonymous craftsman whose work is distinguishable from others by its characteristic style and quality. The property must express a particular phase in the development of the master's career, an aspect of his or her work, or a particular idea or theme in his or her craft (National Park Service 1995:20).

Victor Gruen qualifies as a master who is noted for his contributions to the development of regional shopping centers in the mid-twentieth century; however, The Shops at Tanforan is not representative of Gruen's work (Los Angeles Conservancy 2023). Gruen designed numerous retail projects across the country, many in California, from individual storefront designs to large shopping center developments. The Shops at Tanforan's construction in the 1970s was late in Gruen's architectural career in the United States and was neither preeminent nor innovative among his designs. Instead, The Shops at Tanforan post-date his notable shopping developments of the 1950s and 1960s, including the revolutionizing 1956 Southdale Center design that influenced the shopping center typology. The Shops at Tanforan was constructed two decades after the building typology's formation, features its typical form and features, and has undergone substantial alterations and corporate branding due to tenant turnover. Lastly, The Shops at Tanforan is a ubiquitous design among Gruen's other commercial enterprises of the 1970s, which include offices, banks, and urban planning designs that were a departure from his regional shopping center designs from the 1950s and 1960s. Therefore, The Shops at Tanforan does not reflect an important phrase in the master's career or a particular idea or theme in his or her craft, nor does it appear significant as an example of the work of master architect Victor Gruen.

The Shops at Tanforan is also associated with Hap Smith and the Hapsmith Company, who facilitated the construction of The Shops at Tanforan throughout the early 1970s. The Shops at Tanforan was the fifth of Beverly Hills developer Hap Smith's 10 planned major shipping centers in Northern California, including Fremont, Santa Clara, Sacramento, and San Jose (*San Mateo Times* 1968b:40). However, research has revealed no evidence that Smith executed historically significant or innovative shopping center design, business development, or operations that are best represented by The Shops at Tanforan. Despite its association with Smith's expansion of regional shopping center development into Northern California in the mid-to-late twentieth century, The Shops at Tanforan is an undistinguished example of Smith's work. Moreover, it is a ubiquitous example of Smith's work in rapid shopping center construction with a standard design and business model of the shopping center building typology of its time.

The possession of high artistic values refers to a property's articulation of a particular concept of design so fully that it expresses an aesthetic ideal (NPS 1995:20). In accordance with the regional shopping center building typology, The Shops at Tanforan comprises a large, generic massing with exterior-facing stores with changing tenants and public entrances. The form is utilitarian, and the design lacks a specific style or ornamentation beyond cladding and attached signage to differentiate stores with recognizable national branding, including Barnes & Noble, Target, and Petco. Thus, the form is indistinguishable, and the aesthetics are generic and change with tenancy, thus nullifying an aesthetic ideal and high artistic value. Similarly, The Shops at Tanforan do not represent a significant and distinguishable entity whose components may lack individual distinction, which is generally applied to districts. As such, The Shops at Tanforan does not appear significant under NRHP/CRHR Criterion C/3.

4.2.4 Criterion 4 (Information Potential)

To be considered eligible for listing under NRHP/CRHR Criterion D/4, The Shops at Tanforan would need to have yielded, or may be likely to yield, information important in prehistory or history. The Shops at Tanforan is a typical example of the regional shopping center building typology contextualized within a developmental history that is well documented in historical sources, photographs, and other existing documentation. Therefore, there is a low probability that this

resource would fill any data gaps not already contained in the historical record. The Shops at Tanforan does not appear to be significant as a source, or likely source, of important historical information on the history of San Bruno or California, and it does not appear likely to yield important information about historic construction methods, materials, or technologies. Moreover, the lack of historical significance described in the application of CRHR Criteria 1, 2, and 3 above supports a conclusion that this built-environment resource is not likely to yield information important to history. For this reason, The Shops at Tanforan is not significant under Criterion 4.

Chapter 5
Conclusion

The subject property, The Shops at Tanforan, is not individually eligible for listing in the CRHR because it does not meet any of the applicable eligibility criteria. No evidence suggests that the surrounding shopping complex would qualify as a historic district such that The Shops at Tanforan would be a contributor to a historic district. As such, The Shops at Tanforan is not a historical resource for the purposes of CEQA.

Chapter 7
Preparers' Qualifications

Christine Cruiess is a senior historic preservation specialist with 24 years of specialized experience in architectural history, historic preservation, and architectural conservation. She meets the Secretary of the Interior's Professional Qualifications Standards for architectural history and history. Ms. Cruiess' work has focused on CEQA, NEPA, and NRHP Section 106 cultural resources assessments throughout the mid-Atlantic states and California. She holds a bachelor's degree in classical archaeology and anthropology from the University of Michigan and a master's degree in historic preservation from the University of Pennsylvania.

Nicole Felicetti is an architectural historian with 5 years of professional experience in architecture, architectural history, and cultural resources management and interpretation. She meets the Secretary of the Interior's Professional Qualifications Standards for architectural history. Ms. Felicetti's work has focused on CEQA and NRHP Section 106 cultural resources assessments and analysis of project impacts. She is experienced in writing Department of Parks and Recreation (DPR) 523 form sets for a variety of California built-environment property types, technical reports, and historic context statements. Ms. Felicetti holds a bachelor's degree in architecture from the University of Kentucky and a master's degree in historic preservation from the University of Pennsylvania.

Preliminary Geotechnical Investigation

14 October 2022

Greg Gehlen
Alexandria Real Estate Equities, Inc.
1700 Owens Street
San Francisco, California 94158

Subject: Preliminary Geotechnical Investigation
Tanforan Mall Redevelopment
San Bruno, California
Project No. 750673801

Dear Greg:

This letter provides the results of our preliminary geotechnical investigation for the proposed Tanforan Mall Redevelopment in San Bruno, California. Our scope of services was outlined in our proposal dated 17 August 2021 and budget increase requests dated 2 June and 20 July 2022.

The project consists of the main project site and an adjacent parcel to the north as shown on Figures 1 and 2. The main site is on the east side of El Camino and the north side of interstate 380, and is bound by Sneath Lane to the north, Huntington Avenue and the San Bruno BART Station and associated garage and police station to the east, Interstate 380 to the south, and El Camino Real to the west, as shown on Figure 3. The main site is irregularly-shaped with north-south and east-west dimensions of approximately 1,900 and 1,200 feet, respectively. The ground surface at the main site ranges from approximately Elevation 36.5 feet[1] to 66 feet. The main site is occupied by several existing mall buildings, two above-grade parking structures, and surface parking.

The north parcel is bound by a one-story commercial building and associated parking to the north, a one-story structure to the east, and Huntington Avenue to the south and west, as shown on Figures 2 and 3. The ground surface at the north parcel ranges from approximately Elevation 38.5 to 44.5 feet and the parcel is occupied by a surface parking lot.

1.0 PLANNED DEVELOPMENT

We understand that you plan to develop the main site and north parcel as a mixed-use development with laboratory, office, retail, commercial, and residential space, as summarized below and presented on Figure 3:

- nine mid-rise office/laboratory buildings (designated Lab 1 through Lab 9) at grade or with a partial basement
- three residential buildings, one with a two-level basement (designated RESI Block A) and two with one-level basements (designated RESI Block B and RESI Block C)

[1] All elevations in this report reference the North American Vertical Datum of 1988 (NAVD88). Existing site elevations are taken from an existing conditions plan produced by the project civil engineer, BKF Engineers, dated 23 December 2021.

- Target store with a partial basement
- cinema at grade
- parking garage with a partial basement (designated Lab Garage)
- Central Utility Plant (designated CUP), at grade.

The ground surface at both the main site and north parcel generally slopes from west to east; however, there are also existing buildings and surface parking lots with variable topography. These elements will be demolished as part of construction.

Many of the structures are planned to be constructed at grade and will approximately match existing grades. Several of the proposed structures will have excavations for one or two basement levels. The bottommost level for the parking garage, Target, Lab 2, and Lab 3 will be cut into the existing slope on the west and will daylight on the east side of each respective building – we refer to this condition as a "partial basement".

Table 1 below summarizes our understanding of existing and proposed conditions at the proposed buildings, in addition to approximate anticipated excavation depths.

TABLE 1
Summary of Conditions at Proposed Buildings

Proposed Building	Description	Approximate Range of Ground Surface Elevation at Building (feet, NAVD88)	Proposed Finished Floor (feet, NAVD88)
RESI Block A	Seven levels above grade and two-level basement	46 to 50	25
RESI Block B	Seven levels above grade and one-level basement	42 to 44	35
RESI Block C	Five levels above grade and one-level basement	38 to 45	35
Cinema	Four levels at grade	42 to 44	45
Target	Two levels above grade with one-level partial basement	47 to 58	45
Lab 1	Four levels at grade	58 to 62	61
Lab 2	Four levels above grade and one-level partial basement at eastern end	61 to 64	45 and 61
Lab 3	Four levels above grade and one-level partial basement	61 to 66	45
Lab 4	Five levels at grade	(unknown)	45
Lab 5	Five levels at grade	(unknown)	45
Lab 6	Five levels at grade	48	45
Lab 7	Five levels at grade	45 to 48	45
Lab 8	Five levels at grade	39 to 48	45
Lab 9	Five levels at grade	48	45
CUP	Three levels at grade	63	61
Lab Garage	Seven levels above grade and one-level partial basement	40 to 63	38

Based on a preliminary loading exhibit provided by Tipping Structural Engineers[2], we understand the laboratory buildings, Target, Cinema, and CUP will have an average dead plus live load bearing pressure ranging from 600 to 1,200 pounds per square foot (psf), the residential buildings will have an average dead plus live bearing pressure ranging from 650 to 1,700 psf, and the lab garage will have an average dead plus live bearing pressure between 1,500 and 1,700 psf.

2.0 SCOPE OF SERVICES

The objectives of our preliminary investigation were to evaluate subsurface conditions at the site and develop preliminary geotechnical conclusions and recommendations regarding site development based on a limited site investigation and information from nearby projects.

Our scope included drilling eight borings and advancing twelve cone penetration tests (CPTs) and providing our preliminary conclusions and recommendations regarding geotechnical issues to be considered during planning and design of the project based on the results of our limited investigation and review of existing data, including:

- soil and groundwater conditions at the site
- seismic hazards, including ground rupture, liquefaction, and differential compaction
- probable foundation type(s) for the proposed structures
- temporary shoring type(s) for potential basement excavations
- below-grade wall considerations
- settlement behavior
- floor slab support
- seismic site class per 2019 California Building Code
- BART considerations
- construction considerations.

3.0 FIELD EXPLORATION

To investigate the subsurface conditions at the site, we drilled eight borings and performed twelve cone penetration tests in vacant areas of the site. The approximate locations of the borings and CPTs are also presented on Figure 2. Due to the presence of existing structures, exploration in the central and eastern areas of the main site was not possible during the time of our field exploration program. These areas should be further explored during a design-level investigation.

[2] "2022-08-26_Tanforan_Approximate Building Bearing Pressures" by Tipping Structural Engineers, dated 26 August 2022.

Prior to performing our field investigation, we notified the San Mateo County Environmental Health Services Division (SMC Health) and Underground Service Alert (USA), and checked the boring and CPT locations for utilities using an independent private utility locator.

Upon completion, the borings and CPTs were backfilled with grout consisting of cement and water in accordance with the requirements of SMC Health. The soil cuttings from the borings were collected in 55-gallon drums, which were stored temporarily off-site, tested, and eventually properly disposed.

3.1 Borings

Between 20 June 2022 and 25 June 2022, the borings (designated B-1 through B-8) were drilled using a truck-mounted drill rig equipped with hollow-stem augers operated by Exploration Geoservices, Inc. of San Jose, California. The borings were drilled to depths of approximately 50 to 110 feet beneath the existing ground surface (bgs). Logs of the borings are presented in Appendix A as Figures A-1 through A-8. The soil encountered in the borings was classified in accordance with the soil classification chart presented on Figure A-9.

Soil samples were obtained using one of two samplers:

- Sprague & Henwood (S&H) split-barrel sampler with a 3.0-inch outside diameter and 2.5-inch inside diameter, lined with steel or brass tubes with an inside diameter of 2.43 inches

- Standard Penetration Test (SPT) split-barrel sampler with a 2.0-inch outside diameter and 1.5-inch inside diameter, without liners.

The sampler types were chosen on the basis of soil type being sampled and desired sample quality for laboratory testing. In general, the S&H sampler was used to obtain samples in cohesive soil and the SPT sampler was used to evaluate the penetration resistance of sandy soil.

The SPT and S&H samplers were driven with a 140-pound, above-ground, automatic rope and cathead hammer falling 30 inches. The samplers were driven up to 18 inches and the hammer blows required to drive the samplers every six inches of penetration were recorded and are presented on the boring logs. The driving of samplers was discontinued if the observed (recorded) hammer blows was 50 for six inches or less of penetration. The blow counts required to drive the S&H and SPT samplers 12 inches (or less if 50 blows were achieved) were converted to approximate SPT N-values using factors of 0.6 and 0.1, respectively. The N-values are shown on the boring logs. The blow counts used for this conversion were: 1) the last two blow counts if the sampler was driven more than 12 inches, 2) the last one blow count if the sampler was driven more than six inches but less than 12 inches, and 3) the only blow count if the sampler was driven six inches or less. A summary of the borings performed is presented in Table 2.

TABLE 2
Summary of Borings

Boring	Approximate Ground Surface Elevation (feet, NAVD88)	Total Depth (feet)	Depth to Groundwater (feet)	Groundwater Elevation (feet, NAVD88)
B-1	38.4	50.0	13.3	25.1
B-2	41.6	108.8	12.0	29.6
B-3	46.6	50.0	15.3	31.3
B-4	48.5	51.5	19.0	29.5
B-5	60.7	110.0	29.0	31.7
B-6	64.6	50.0	33.0	31.6
B-7	63.5	56.5	39.0	24.5
B-8	48.4	99.0	30.0	18.4

3.2 Cone Penetration Tests

Between 22 June and 25 June 2022, twelve CPTs were advanced by ConeTec, Inc. of San Leandro, California to depths between approximately 19 and 101 feet bgs. Prior to pushing the CPTs, ConeTec cored through the asphalt. The CPTs were performed by hydraulically pushing a 1.7-inch-diameter, cone-tipped probe, with a projected area of 15 square centimeters, into the ground. The cone tip measures tip resistance, and the friction sleeve behind the cone tip measures frictional resistance. Electrical strain gauges or load cells within the cone continuously measured the cone tip resistance and frictional resistance during the entire depth of each probing. Accumulated data was then processed by computer to provide engineering information, such as the types and approximate strength characteristics of the soil encountered. Pore pressure dissipation tests (PPDTs) were performed at all CPTs. However, only the PPDTs performed at CPT-3, and CPT-5 through CPT-12 reached equilibrium pore pressures. The CPT logs, showing tip resistance and friction ratio by depth, as well as interpreted SPT N-values, friction angles, soil strength parameters, and interpreted soil classifications, are presented in Appendix B. The results of the PPDTs are also provided in Appendix B. A summary of the CPTs performed is presented in Table 3.

TABLE 3
Summary of CPTs

CPT	Approximate Ground Surface Elevation (feet, NAVD88)	Total Depth (feet)	Depth to Groundwater (feet)	Groundwater Elevation (feet, NAVD88)
CPT-1	43.4	100.9	N/A	N/A
CPT-2	41.8	41.8	N/A	N/A
CPT-3	46.7	87.3	24.1	22.6
CPT-4	56.7	19.4	N/A	N/A
CPT-5	62.6	100.6	32.4	30.2
CPT-6	61.4	71.4	30.1	31.3
CPT-7	62.2	73.8	30.2	32.0
CPT-8	58.8	50.7	25.5	33.3
CPT-9	44.5	33.4	15.4	29.1
CPT-10	47.9	50.9	22.8	25.1
CPT-11	64.8	79.0	36.4	28.4
CPT-12	48.4	89.7	25.8	22.6

Note: N/A = not available; equilibrium was not reached in the PPDT.

3.3 Laboratory Testing

The soil samples recovered from the borings were re-examined in the office for soil classifications, and representative samples were selected for laboratory testing. The laboratory testing program was designed to correlate and evaluate engineering properties of the soil at the sites. Samples were tested to measure moisture content, dry density, fines content, Atterberg limits, shear strength, and compressibility (consolidation characteristics). Results of the laboratory tests are included on the boring logs and in Appendix C.

3.4 Soil Corrosivity Testing

Additional laboratory testing was performed to evaluate the corrosivity of the near-surface soils. The results of the corrosivity analyses and a brief corrosivity evaluation by CERCO Analytical, Inc. are presented in Appendix D.

4.0 SITE CONDITIONS

The ground surface at the main site slopes from approximately Elevation 36.5 feet on the east side of the site to 66 feet on the west side. The main site is currently occupied by several existing mall buildings, two above-grade parking structures, and surface parking and is adjacent to a San Bruno BART parking garage, San Bruno police department, and San Bruno BART station at the north/ northeast site extents. We understand that the JCPenney building in the mall contains

a one-level basement, with a basement finished floor elevation of approximately 49.4 feet NAVD88[3].

We understand a below-grade BART tunnel runs approximately north–south along the eastern extent of the site; however, we do not know the depth and size of the tunnel, nor do we know its distance from the site. As-built BART drawings were not available at the time of writing but should be reviewed as part of a design-level geotechnical investigation.

The north parcel is an asphalt-paved parking lot that slopes gradually from about Elevation 45.5 feet on the west side to Elevation 38.5 feet on the east side.

5.0 SUBSURFACE CONDITIONS

The results of our investigation indicate the sites are underlain by moderately compressible medium stiff to hard clay and silt with variable amounts of sand and gravel, interbedded with layers of loose to very dense sands with variable amounts of gravel, clay, and silt, to the maximum explored depth of 110 feet bgs. At B-5, medium dense clayey sand fill was encountered, extending to a depth of 7 feet bgs. It is not known whether the fill was placed in a controlled (compacted) manner.

Atterberg limits tests performed on the near-surface soil indicate that the clay typically has low to moderate expansion potential[4]; however, one clay sample in B-2 at 9.5 feet bgs, which will be near the planned final grades, was found to be highly expansive, with a plasticity index of 24. Where tested, the clays are slightly overconsolidated[5] with overconsolidation ratios[6] (OCRs) from about 1.2 to 3.3 and undrained shear strengths of about 1,200 to 4,900 psf.

At the north parcel, at the location of the proposed RESI Block C, groundwater was encountered at 13.3 feet bgs (about Elevation 25.1 feet) in B-1. We reviewed data from monitoring wells[7] in the vicinity of the north parcel, which indicates high groundwater was encountered at depths between 8.0 and 8.3 feet bgs (corresponding to Elevations 24.7 to 25.4 feet).

At the main site, groundwater was encountered between about 12 and 39 feet bgs (Elevations 18.4 to 31.3 feet in the borings and 22.6 to 33.3 feet in the CPTs). We reviewed data from

---

3 "Site Demolition Plan, Sheet C-1.1" by Altoon and Porter Architects, dated 24 May 2006.

4 Highly expansive soil undergoes large volume changes with changes in moisture content.

5 An underconsolidated clay has not yet achieved equilibrium under the existing load; a normally consolidated clay has completed consolidation under the existing load; and an overconsolidated clay has experienced a pressure greater than its current load.

6 The overconsolidation ratio is the ratio of maximum past pressure a clay has experienced divided by the estimated in-situ effective stress the clay is currently under.

7 "First Semi-Annual 2010 Groundwater Monitoring & Investigation Report, Sears Automotive Center Facility (No. 1478), 1178 El Camino Real, San Bruno, California" by Burns & McDonnell Engineering Company, Inc." dated September 2010.

monitoring wells[8] in the vicinity of the main site, which indicates high groundwater was encountered between 5.5 and 24.1 feet bgs (Elevations 24.7 to 38.2 feet).

6.0 REGIONAL SEISMICITY AND FAULTING

The project site is in a seismically active region. Numerous earthquakes have been recorded in the region in the past, and moderate to large earthquakes should be anticipated during the service life of the proposed development. The major active faults in the area are the San Andreas, Pilarcitos, San Gregorio, Monte Vista-Shannon, and Hayward-Rodgers Creek faults. These and other faults of the region are shown on Figure 4. For each of the active faults within about 50 kilometers (km) of the site, the distance from the site and estimated mean characteristic Moment magnitude[9] [2014 Working Group on California Earthquake Probabilities (WGCEP) (2015) and Uniform California Earthquake Rupture Forecast Version 3 (UCERF3) as detailed in the United States Geological Survey Open File Report 2013-1165] are summarized in Table 4. The mean Moment magnitude presented on Table 4 was computed assuming full rupture of the segment using Hanks and Bakun (2008) relationship.

TABLE 4
Regional Faults and Seismicity

Fault Segment	Approx. Distance from fault (km)	Direction from Site	Mean Characteristic Moment Magnitude
San Andreas 1906 event	2.8	West	8.1
Pilarcitos	9	Southwest	6.7
Total San Gregorio	12	West	7.6
Monte Vista – Shannon	20	Southeast	7.0
Total Hayward-Rodgers Creek Healdsburg	27	East	7.6
Mission (connected)	33	East	6.1
Butano	37	South	6.7
Contra Costa (Lafayette)	37	Northeast	6.1
Total Calaveras	40	East	7.5
Franklin	40	Northeast	6.7
Contra Costa (Larkey)	40	Northeast	6.0
Contra Costa Shear Zone (connector)	41	Northeast	6.6
Mount Diablo Thrust	43	Northeast	6.6
Contra Costa (Dillon Point)	46	Northeast	6.1
Concord	48	Northeast	6.4

Note: The table above is a summary and does not include all the fault segmentation, alternate traces and low activity faults included in the UCERF3 model.

[8] "2021 Groundwater Monitoring Report, Sears Automotive Service Center (No. 1478), 1178 El Camino Real, San Bruno, CA" by AECOM, dated 11 February 2022 and "Groundwater Monitoring Report – First Quarter 2015, Shell-Branded Service Station, 1199 El Camino Real, San Bruno, California" by Conestoga-Rovers and Associates, dated 14 April 2015.

[9] Moment magnitude is an energy-based scale and provides a physically meaningful measure of the size of a faulting event. Moment magnitude is directly related to average slip and fault rupture area.

Figure 4 also shows the earthquake epicenters for events with magnitude greater than 5.0 from January 1800 through August 2014. Since 1800, four major earthquakes have been recorded on the San Andreas fault. In 1836 an earthquake with an estimated maximum intensity of VII on the Modified Mercalli (MM) scale (Figure 6) occurred east of Monterey Bay on the San Andreas fault (Toppozada and Borchardt 1998). The estimated Moment magnitude, $M_{w,}$ for this earthquake is about 6.25. In 1838, an earthquake occurred with an estimated intensity of about VIII-IX (MM), corresponding to an M_w of about 7.5. The San Francisco Earthquake of 1906 caused the most significant damage in the history of the Bay Area in terms of loss of lives and property damage. This earthquake created a surface rupture along the San Andreas fault from Shelter Cove to San Juan Bautista approximately 470 kilometers in length. It had a maximum intensity of XI (MM), an M_w of about 7.9, and was felt 560 kilometers away in Oregon, Nevada, and Los Angeles. The Loma Prieta Earthquake occurred on 17 October 1989 in the Santa Cruz Mountains with an M_w of 6.9, the epicenter of which is approximately 82 km from the site.

In 1868 an earthquake with an estimated maximum intensity of X on the MM scale occurred on the southern segment (between San Leandro and Fremont) of the Hayward fault. The estimated M_w for the earthquake is 7.0. In 1861, an earthquake of unknown magnitude (probably an M_w of about 6.5) was reported on the Calaveras fault. The most recent significant earthquake on this fault was the 1984 Morgan Hill earthquake (M_w = 6.2).

The most recent earthquake to affect the Bay Area occurred on 24 August 2014 and was located on the West Napa fault, approximately 66 km northeast of the site, with an M_W of 6.0.

The 2016 U.S. Geologic Survey (USGS) predicted a 72 percent chance of a magnitude 6.7 or greater earthquake occurring in the San Francisco Bay Area in 30 years (Aagaard et al. 2016). More specific estimates of the probabilities for different faults in the Bay Area are presented in Table 5.

TABLE 5
WGCEP (2015) Estimates of 30-Year Probability (2014 to 2043) of a Magnitude 6.7 or Greater Earthquake

Fault	Probability (percent)
Hayward-Rodgers Creek	33
Calaveras	26
N. San Andreas	22
San Gregorio	16
Mount Diablo Thrust	16

7.0 SEISMIC HAZARDS

During a major earthquake on a segment of one of the nearby faults, strong to very strong shaking is expected to occur at the project site. Strong shaking during an earthquake can result in ground

failure such as that associated with soil liquefaction[10], lateral spreading[11], and seismic densification[12].

7.1 Liquefaction

When a saturated soil with little to no cohesion liquefies during a major earthquake, it experiences a temporary loss of shear strength as a result of a transient rise in excess pore water pressure generated by strong ground motion. Flow failure, lateral spreading, differential settlement, loss of bearing, ground fissures, and sand boils are evidence of excess pore pressure generation and liquefaction. The California Geologic Survey (CGS) has prepared a map titled *State of California Seismic Hazard Zones, San Francisco South Quadrangle Official Map*, dated 23 September 2021. This map was prepared in accordance with the Seismic Hazards Mapping Act of 1990. This map indicates that both the main site and adjacent parcel are within a liquefaction hazard zone.

Thin, discontinuous layers of medium dense silty sand and clayey sand were encountered below the groundwater table. These layers vary in thickness from about ¼ to 1½ feet and were encountered at depths between approximately 10 and 42 feet bgs. Based on our analyses, we conclude several of these layers could potentially liquefy during a major earthquake and could experience liquefaction-induced settlement. We used design groundwater elevations ranging from Elevation 33 feet to Elevation 39 feet in our analysis, which is consistent with the preliminary design groundwater levels recommended herein. Using the Boulanger and Idriss (2014), Cetin et al. (2004), and Robertson (2016) liquefaction triggering analysis methods with a mapped peak ground acceleration (PGA_M) of 1.04g, we estimate up to approximately ½ inch of liquefaction-induced settlement could occur in the main site. In the north parcel, we estimate the soils below the water table are sufficiently dense or silty or clayey such that the potential for liquefaction is low. These conclusions should be confirmed as part of a design-level geotechnical investigation.

7.2 Lateral Spreading

Lateral spreading is a phenomenon in which a surficial soil displaces along a shear zone that has formed within a continuous underlying liquefied layer. The surficial blocks are transported downslope or in the direction of a free face, such as a channel, by earthquake and gravitational forces. Lateral spreading is generally the most pervasive and damaging type of liquefaction-induced ground failure generated by earthquakes.

According to Youd, Hansen, and Bartlett (1999), for significant lateral spreading displacements to occur, the soils should consist of saturated cohesionless sandy sediments with $(N_1)_{60}$ less than

[10] Liquefaction is a transformation of soil from a solid to a liquefied state during which saturated soil temporarily loses strength resulting from the buildup of excess pore water pressure, especially during earthquake-induced cyclic loading. Soil susceptible to liquefaction includes loose to medium dense sand and gravel, low-plasticity silt, and some low-plasticity clay deposits.

[11] Lateral spreading is a phenomenon in which surficial soil displaces along a shear zone that has formed within an underlying liquefied layer. Upon reaching mobilization, the surficial blocks are transported downslope or in the direction of a free face by earthquake and gravitational forces.

[12] Seismic densification (also referred to as cyclic densification or differential compaction) is a phenomenon in which non-saturated, cohesionless soil is densified by earthquake vibrations, causing ground-surface settlement.

15, where liquefaction of the soils is likely to occur based on standard liquefaction analysis. While the main site has a significant downslope towards a free face at the eastern boundary of the site, the potentially liquefiable soils underlying the site are not continuous beneath the main site. The north parcel is relatively level without a significant downslope and the potential for liquefaction is low. Consequently, we conclude that the potential for lateral spreading at both the main site and the north parcel is low.

7.3 Seismic Densification

Seismic densification (also referred to as cyclic densification and differential compaction) can occur during strong ground shaking in loose, granular deposits above the water table, resulting in ground surface settlement. Loose to dense sand was encountered above the water table in the borings and CPTs; using the Pradel (1998) approach for seismic densification of dry sand and our engineering judgement, we estimate up to 3 inches of settlement due to seismic densification may occur across the sites. However, some of these layers are within the planned excavations for buildings; accounting for the excavations, we estimate the potential for seismic densification settlement within the building footprints is low, except for the at-grade lab structures, where we estimate up to 1 inch of seismic densification may occur within the building footprints. These conclusions should be confirmed as part of a design-level geotechnical investigation.

8.0 PRELIMINARY CONCLUSIONS AND RECOMMENDATIONS

We conclude the planned development is feasible from a geotechnical standpoint. The primary geotechnical considerations for the project are: 1) the presence of the BART tunnel east of the main site; 2) the presence of moderately compressible native clay; 3) the presence of near-surface undocumented fill; and 4) selection of an appropriate foundation systems to support the buildings without excessive building settlement. Our preliminary conclusions and recommendations regarding these and other geotechnical issues are discussed in this section.

8.1 BART Considerations

At this time we do not know the depths and extents of the BART tunnel east of the main site. The presence of this tunnel will have a significant impact in determining appropriate foundation and dewatering systems for Labs 8 and 9, the lab garage, and RESI Blocks B and C. BART has developed guidelines for construction near their subway structures. These guidelines include the following:

1. The BART zone of influence (ZOI) is defined as the area above a line from the critical point of the substructure at a slope of 1½ horizontal to 1 vertical.

2. Soil redistribution caused by temporary shoring or permanent foundation systems shall be analyzed.

3. Shoring shall be required to maintain the soil's at-rest condition and the shoring should be checked for seismic loads; shoring structure shall be monitored for movement.

4. Minimum predrilled depth for driven piles shall be approximately 10 feet below the line of influence.

5. Vibration monitoring of piling operations closest to the tunnels will be required; piles to be installed in a sequence away from the subway structure.

6. Tunnels, where affected, shall be monitored for movement and deformation due to adjacent construction activities to ensure structural and operational safety.

7. Dewatering shall be monitored for changes in groundwater level; recharge program will be required if existing groundwater level is expected to drop more than two feet.

8. Where basements are excavated, the amount of loading (on subway) can be increased to the extent it is balanced by the weight of the removed material; however, the effect of soil rebound in such cases shall be fully analyzed.

9. All structures shall be designed so as not to impose any temporary or permanent adverse effects, including unbalanced loading and seismic loading, on the adjacent BART subways.

The BART guidelines will need to be considered during the design and construction of foundation systems, shoring, and below-grade walls for the planned buildings where within the zone of influence.

8.2 Foundations and Settlement

Factors influencing the selection of a safe, economical foundation system with adequate capacities for the proposed buildings are:

- the presence of the nearby BART tunnels and BART's guidelines and requirements for development adjacent to the tunnels
- the presence of undocumented fill encountered in B-5
- the presence of moderately compressible clay to significant depth
- total and differential settlement of the buildings and nearby improvements.

In general, the buildings should not be supported in undocumented fill, because the material is variable in its consistency and density and could be susceptible to erratic static settlement. In addition, some of the fill could be loose and susceptible to cyclic densification settlement during a major earthquake. Fill may be present in other portions of the site; a design-level geotechnical investigation should be performed to further evaluate the presence of fill. Where fill is encountered, foundations should extend below the fill or the fill should be improved. Improvement of the fill can be accomplished by overexcavating and recompacting it or by performing in-situ ground improvement.

Even where buildings extend below the fill, moderately compressible clay is present; buildings loads can cause long-term consolidation settlement of the clay. Where excessive total and/or differential is predicted, ground improvement can be performed to control settlement, allowing

for buildings to be supported on shallow foundations. Alternatively, these buildings can be supported on deep foundations. Where the predicted settlement is acceptable, buildings can be supported on shallow foundations consisting of footings or mat foundations.

8.2.1 Residential Buildings and Lab Garage with Basement(s)

We understand that RESI Block A will have a two-level basement with a finished floor at Elevation 25 feet , and RESI Blocks B and C will have one-level basements with finished floors at Elevation 35 feet. The proposed lab garage will have a one-level basement with a finished floor at Elevation 38 feet. Medium stiff to hard clay and medium dense to very dense sand are present at these elevations and have adequate bearing capacity to support the anticipated building loads. However, our analysis indicates that settlement under shallow foundation systems would be excessive. Therefore, we preliminarily conclude that shallow foundations are not feasible and the buildings will need to be supported on ground improvement or deep foundations to control consolidation settlement. Where the buildings are within the BART ZOI, deep foundation systems consisting of double-cased piles or drilled shafts extending through and gaining capacity below the BART ZOI will be needed.

8.2.2 Laboratory Buildings, Target, Cinema, and CUP

We understand that Lab 3 through Lab 9, Target, and the Cinema are all planned to have a finished floor elevation of 45 feet. As described, Lab 3 and Target are on sloping ground and will be cut into the slope and daylight at Elevation 45 feet. Cuts will be up to about 21 feet. The Cinema and Labs 4 through 9 will be at grade. Lab 2 will be stepped, and will be supported at grade, with finished floors at both Elevation 61 and 45 feet, and cut into the slope with a partial basement. Lab 1 and CUP will be supported at grade at Elevation 61 feet. At these given elevations, the buildings will bear in medium stiff to hard clay or medium dense to very dense sand. Based on our analysis, we estimate that static building settlement will be less than 1 inch, with differential settlement of less than ½ inch over 30 feet. Seismically induced settlement will be less than ½ inch at the Target, Cinema, and CUP and less than 1½ inches at the Lab buildings; we expect that all of the seismically induced settlement could be differential settlement over 30 feet. Therefore, we preliminarily conclude that the laboratory buildings, Target, Cinema and CUP can be supported on footings or a mat foundation gaining support in the medium stiff to hard clay or medium dense to very dense sand. Labs 8 and 9 may extend within the BART ZOI. Where these buildings are within the BART ZOI, deep foundation systems consisting of double-cased piles or drilled shafts extending through and gaining capacity below the BART ZOI will be needed.

Boring B-5, where undocumented fill was encountered, is within the planned Lab 2 footprint. Based on preliminary site and basement plans provided by Gensler[13], we understand that Lab 2 has a finished floor at Elevation 61 feet. At B-5, undocumented fill was encountered to Elevation 54 feet; Lab 2 foundations should bear below the bottom of the undocumented fill elevation or the fill should be improved.

[13] "220829_SitePlans" by Genlser, dated 29 August 2022.

8.2.3 Site Settlement at Areas with New Fill

We understand from the preliminary plans that planned grading throughout the site involves placing up to 6 feet of fill in between buildings. The results of consolidation testing indicate the native onsite clay is overconsolidated, but can still settle in recompression when new loads are applied. We used data from our investigation to estimate the amount of settlement that could occur from varying new fill thicknesses across the site; we estimate up to about 1 inch of consolidation settlement should be expected for up to about 6 feet of fill.

8.2.4 Ground Improvement

We judge feasible ground improvement techniques include rigid inclusions (RIs) or deep soil mixing (DSM). We also considered compacted aggregate columns (CAPs) and judge that they may not be suitable at this site due to the presence of clayey soils. A design-build contractor should design and install the ground improvement; the system should be designed to conform with the performance requirements of the structural engineer, including bearing capacity and total and differential settlement. In general, settlement of foundations supported on improved ground improved to competent soil should be expected to be less than 1 inch; differential settlement should be on the order of ½-inch between adjacent columns.

The purpose of ground improvement at the residential building and lab garage would be to control settlement. We preliminarily recommend that ground improvement elements should extend deep enough to limit static settlements to 1 inch or less. For estimating purposes, we anticipate ground improvement elements extending about 40 feet below the bottom of excavation should be sufficient to adequately control settlement. The design-level geotechnical report should be provided to the specialty ground improvement contractor for design and cost estimating purposes; we should review the final design.

DSM is in-place soil treatment with cement grout using mixing shafts consisting of auger cutting heads, discontinuous flight augers, or blades/paddles, creating soil-cement columns. DSM elements may be installed in a variety of patterns including cellular blocks, a grid pattern, or columns. Typical DSM columns have a minimum diameter of three feet. The soil-cement columns should be installed in a pattern that adequately resists the anticipated lateral forces and transfers building loads into the competent very dense sand and stiff clay layers. Resistance to lateral loads will be developed by friction along the contact area between the soil-cement column shafts and the bottom of the foundation. Use of soil-cement columns will require testing to confirm that adequate mixing and strength has been achieved. The soil replacement ratio of deep soil mixing can vary from 30 to 50 percent, depending on the building loads and subsurface soil.

RIs are constructed by using a non-displacement or a displacement tool to create a shaft that is filled with grout injected under pressure as the tool is withdrawn from the hole. Use of a displacement tool produces minimal soil cuttings because the soil is displaced during column installation; because the soil is displaced, some densification occurs in the soil between the individual columns. RIs typically vary from 18 to 36 inches in diameter; the selected diameter is based on building loads and spacing of columns. Use of RIs will require load testing to confirm estimated capacities.

Where rigid inclusions or non-overlapping DSM elements are installed, the foundations should not be in direct contact with the elements. If an LTP is not used, a seismic break should be provided between the element and the foundation to separate the foundation from the element such that the lateral loads are resisted solely by the foundation. A seismic break typically consists of a cushion of 12 to 18 inches of gravel, crushed rock, or aggregate base.

The ground improvement contractor should prepare a quality control plan to monitor the ground improvement element installation and submit it for our review and approval prior to construction. The planned layout of the ground improvement should take into account the column layout of the overlying building by centering ground improvement elements beneath building columns.

8.2.5 Shallow Foundations

While we understand the average loads across the building footprints range from 600 psf to 1,700 psf, we understand concentrated loads near columns could be higher; accordingly we preliminarily recommend footings or mat foundations bearing in medium stiff to stiff clay or medium dense to dense sand be designed for an allowable bearing capacity of 4,000 psf for dead-plus-live loads, which includes a factor of safety of about 2. For total loads, including wind and seismic loads, the allowable bearing capacity can be increased by one third, which results in a factor of safety of 1.5.

One near-surface clay sample in B-2 at 9.5 feet bgs, which is at approximate foundation subgrade level for RESI Block B, was found to be highly expansive, with a plasticity index of 24. During design-level investigations, additional Atterberg limits testing should be performed in order to evaluate the potential for expansive soil. Where expansive soil is present, deepened footings and/or a thickened floor slab may be needed, additional subgrade preparation will be needed under foundations and floor slabs, and moisture should be managed throughout construction.

Lateral loads can be resisted by a combination of passive resistance acting against the vertical faces of the mat or footings and friction along their base. To compute lateral passive resistance, we recommend using an equivalent fluid weight (triangular distribution) of 250 pounds per cubic foot (pcf) above the design groundwater level and 130 pcf below the design groundwater level. Frictional resistance should be computed using a base friction coefficient of 0.3, assuming the foundation bears directly on soil. If any type of membrane is placed under the foundations, the friction coefficient may be lower and will depend on the type of membrane – if concrete is placed over a vapor retarder, typical allowable friction coefficients are between 0.15 and 0.25. The passive pressure and frictional resistance values include a factor of safety of at least 1.5 and may be used in combination without reduction.

Where buildings on shallow foundations are placed, a new cycle of primary consolidation may begin and additional settlement may occur. We used the results of our preliminary studies to estimate the amount of settlement under buildings supported on shallow foundations; we anticipate up to 1 inch of settlement for mats with average bearing pressures of approximately 1,000 psf. At this preliminary level, we did not separately analyze footings with allowable bearing pressures of 4,000 psf.

8.2.6 Deep Foundations

Where deep foundations are required, we preliminarily conclude that the most viable deep foundation systems are non-displacement augured cast-in-place (ACIP) piles or drilled shafts gaining capacity in friction in the native soil. These foundation types are installed using equipment that does not create significant vibrations or excessive noise. In addition, the diameter and lengths of these foundation types can be adjusted to suit design requirements and specific site conditions.

For preliminary estimating purposes, we estimate an ultimate skin friction capacity of 950 psf can be used for ACIP piles and drilled shafts. End bearing should be neglected. ACIP piles or drilled shafts should be spaced at least three pile diameters center-to-center to prevent vertical capacity reductions due to pile interaction effects. For preliminary planning purposes, we anticipate ACIP piles or drilled shafts would settle less than 1 inch, with differential settlement of less than ½-inch over 30 feet.

Where deep foundations are within the BART ZOI, they will need to be double-cased or constructed with a permanent air void so that there is no vertical or lateral load transfer from the new buildings to the BART structures. Typically the permanent void is created in an annular space between the side of the pile and an outer casing.

The ability of an ACIP pile or drilled shaft to resist lateral loads is directly related to the stress-strain characteristics of the upper 10 to 20 feet of soil below the pile cap or double cased section of the pile. Because of the long free length of the double-cased section, no lateral load capacity will be provided by soil within the BART zone of influence. The faces of pile caps and retaining walls should have a compressible material provided to prevent application of lateral pressures within the BART ZOI. Outside the BART ZOI lateral load resistance can be obtained by passive resistance acting against the face of below-grade elements, such as piles, pile caps, grade beams, and interior key walls.

Drilled Shafts

Drilled shifts are installed by drilling and open hole to the required depth, placing reinforcement, and pouring concrete. If water is present, it should be removed prior to concrete placement, or the concrete should be placed by tremie method. Caving soil and groundwater may be encountered during drilling. Therefore, casing and/or drilling fluid may be needed to maintain an open hole. Concrete placement should start upon completion of the drilling and clean out; no holes should be left open overnight.

ACIP Piles

ACIP piles are installed by drilling to the required depth with a hollow-stem continuous-flight auger. When the auger reaches the required depth, cement grout or concrete is injected through the bottom port of the hollow stem auger. Grout or concrete is injected continuously as the augers, still rotating in a forward direction, are slowly withdrawn, replacing the soil removed by the drilling operation. While the grout is still fluid, a steel reinforcing cage is inserted into the shaft. ACIP piles can range in diameter; however, 16-, 18-, and 24-inch-diameter ACIP piles are

typical. Because their capacity depends on the method of installation, ACIP piles should be designed and installed by a design-build specialty contractor familiar with these types of piles.

ACIP piles are designed and constructed by a specialty foundation contractor. The pile specialty contractor should determine capacities, required lengths, and evaluate foundation settlements after a design-level geotechnical investigation is performed. Once designed, an indicator program should be established, and the piles load tested to confirm the design parameters used and estimated pile capacities. The load tests should be performed on indicator piles to confirm the axial compressive capacity. The number of load tests will depend on the proposed number of piles; we recommend planning for two compression and one tension piles load tests at each proposed building for each proposed production installation methodology (i.e. rig type, predrilling depth and diameter, pile length, etc.). Integrity testing, consisting of cross-hole sonic logging or thermal integrity profiling, should be performed on all test and indicator piles/shafts and on a representative number of production piles/shafts.

8.3 Groundwater

Groundwater measurements taken during our investigation were measured during a drought, and groundwater levels varied significantly around the site. We anticipate the groundwater level to vary seasonally. We reviewed the groundwater levels encountered during drilling and measured in pore pressure dissipation tests (PPDTs), as well as historic data available on the State of California Water Resources Control Board GeoTracker website, and judge the design groundwater elevations ranging from Elevation 33 to 39 feet as presented on Figure 3 are appropriate for preliminary design. These design groundwater elevations are preliminary and should be updated for each planned structure based on the design-level investigation(s). These design groundwater levels do not account for the effect of sea level rise, if any.

8.4 Floor Slabs

Where a mat is used for foundation support for a structure, the top of the mat can be used as the basement/ground floor, or a topping slab can be placed above the mat to provide a smooth wearing surface. Outside of the BART ZOI where footings are used for foundation support, floor slabs can be supported on grade. Where floor slabs lie within the BART ZOI, a permanent void should be provided below the slab so as not to load the soil within the BART ZOI and floor slabs should be designed to structurally span between pier/pile caps and grade beams.

We anticipate that the excavations for the mat or footings for the residential buildings and parking garage with one- and two-level basements will extend below the design groundwater elevations; therefore, they should be designed for hydrostatic pressure and waterproofed. The mat/slab for the Target, cinema, CUP, and laboratory buildings will be above the design groundwater elevations, and these mat foundations/slabs should be underlain by a capillary break and vapor retarder system where moisture is undesirable.

8.5 Permanent Below-Grade and Retaining Walls

Based on the planned structures and grading, below-grade walls will be needed for basements and at-grade structures cut into the slope. Retaining walls will be needed along the sloped pathways throughout the campus. For restrained walls, we preliminarily recommend designing

the walls for at-rest earth pressures corresponding to an equivalent fluid unit weight of 65 pounds per cubic foot (pcf) above the groundwater table where drainage is provided and 100 pcf below the groundwater table or where walls are undrained, plus a traffic increment where the wall is adjacent to streets. The traffic increment consists of a uniform lateral pressure of 100 pounds per square foot (psf) applied over the entire wall height. For unrestrained permanent walls, we preliminarily recommend designing the walls for active earth pressures corresponding to an equivalent fluid unit weight of 45 pounds per cubic foot (pcf) above the groundwater table where drainage is provided and 85 pcf below the groundwater table or where walls are undrained, plus a traffic increment where the wall is adjacent to streets. Walls within the BART ZOI will need to be designed as restrained walls.

Because the site is in a seismically active area, below-grade and retaining walls that retain six feet of soil or more should be designed to resist both static and seismic lateral earth pressures. For the seismic condition, the below-grade wall pressure consists of the combination of an active earth pressure and a seismic increment. For restrained walls, we recommend using an active earth pressure plus a seismic increment for the Design Earthquake (DE) using equivalent fluid weights of 100 pcf above the groundwater level where drainage is provided and 115 pcf below the design groundwater level or where walls are undrained. For unrestrained permanent walls, we recommend using an active earth pressure plus a seismic increment for the DE using equivalent fluid weights of 70 pcf above the groundwater level where drainage is provided and 100 pcf below the design groundwater level or where walls are undrained. The walls should be designed for the more critical of at-rest pressures or active plus seismic increment.

8.6 Excavation and Temporary Shoring Types

We anticipate that construction of the planned development will require cuts and excavations, approximately as follows:

- 6 to 13 feet for RESI Block C
- 24 to 28 feet for RESI Block A
- 10 to 12 feet for RESI Block B
- 5 to 16 feet for the Target
- up to 22 feet for the portion of Lab 2 with a finished floor of Elevation 45 feet
- up to 21 feet for Labs 3 and 4
- 13 to 28 feet for the parking garage.

We anticipate that excavation for the foundations of the other laboratory buildings, the CUP, and cinema will require up to approximately 6 feet of excavation.

The excavation for the basements for the residential buildings and the parking garage will extend below the design groundwater table elevations. Groundwater may be encountered during excavation. Where groundwater is encountered in excavations, dewatering will be required.

Temporary cut slopes may be made on a 1½:1 (horizontal:vertical) inclination provided groundwater is not present. Where there is insufficient space to slope the sides of the proposed excavation and where excavations extend below groundwater, temporary shoring will be required.

We judge a shoring system consisting of soldier beams and timber lagging would the most economical system; however, we conclude soldier pile and lagging shoring systems are not appropriate for the proposed basement excavations. Use of a soldier-pile-and-lagging shoring system requires that the area surrounding the project site be dewatered to a depth of at least three feet beneath the proposed excavation depth. Dewatering to significant depths below street grades would result in lowering groundwater beyond the excavation limits, which could result in settlement of the surrounding improvements, impose additional loads on the BART structures (where present), and trigger the need to recharge water levels adjacent to BART structures (where present). In addition, dewatering should not lower the groundwater more than 2 feet outside of the excavation within the BART ZOI. Therefore, a cutoff wall may be required for deeper excavations and for excavations in the BART ZOI. Cantilevered soldier beam and lagging shoring might be feasible for cuts outside the BART ZOI and less than about 10 feet. The groundwater elevation, depth of dewatering, and need for a cutoff wall should be evaluated further during the final geotechnical investigation.

There are several types of cutoff walls; we judge the most appropriate and likely cost-effective system for the project is a deep soil mix (DSM) wall. The depth of cutoff walls should be enough to effectively cut off the flow of groundwater into the planned excavation.

Based on the depths of the excavations, tiebacks or internal bracing will be required for certain buildings. Encroachment permits may be required for tiebacks that extend offsite. Based on our recent experience on other projects, BART has allowed tiebacks into their right of way and ZOI, but has required the tiebacks terminate at least 8 feet from the outside of any BART structure. We anticipate that the areas of the site that require excavation are further than 8 feet from the outside of any BART structure. Internal bracing may be needed if tiebacks are not feasible due to space constraints near BART.

Temporary shoring within the BART ZOI will need to be designed for at-rest pressures plus a seismic increment.

8.7 2019 California Building Code Site Class and Seismic Coefficients

Potentially liquefiable material was encountered in our investigation as previously discussed; however, because the layers that could potentially generate excess pore pressure and/or liquefy are relatively thin and discontinuous, the seismic ground response at the site should not be significantly affected, and the site should behave like a stiff soil site. Therefore, based on the results of our geotechnical investigation and shear wave velocity measurements at the site, we conclude the site can be classified as Site Class D, in accordance with the 2019 CBC and ASCE 7-16.

Accordingly, the following mapped seismic coefficients for design in accordance with the provisions of ASCE 7-16 can be used, provided the structural exceptions in Section 11.4.8 of ASCE 7-16 are met. If the structural exceptions from ASCE 7-16 Section 11.4.8 are not used by

the structural engineer, we should perform a site-specific seismic study to develop response spectra for the site.

- Risk-Targeted Maximum Considered Earthquake (MCE_R) S_S and S_1 of 2.199g and 0.916g, respectively
- Site Coefficients F_a and F_v of 1.0 and 1.7, respectively
- MCE_R spectral response acceleration parameters at short periods, S_{MS}, and at one-second period, S_{M1}, of 2.199g and 1.557g, respectively
- Design Earthquake (DE) spectral response acceleration parameters at short period, S_{DS}, and at one-second period, S_{D1}, of 1.466g and 1.038g, respectively.

8.8 Construction Considerations

During excavation, debris, existing foundations, and concrete rubble may be encountered and should be removed. Hoe-rams, jackhammers, and other similar equipment may be needed to remove some of the larger obstacles, if encountered.

If site grading is scheduled for the rainy season, the native soil may be too wet to achieve adequate compaction during fill placement and may deflect significantly under the weight of construction equipment. For these conditions, moisture conditioning and the use of lightweight and/or track-mounted equipment may be required to lower the moisture content of the soil to a level that will promote proper compaction. Methods of moisture conditioning include mixing and turning (aerating) the soil to naturally dry the soil and lower the moisture content to an acceptable level. Aeration typically requires at least a few days of warm, dry weather to effectively dry the material. Other soil stabilization alternatives include overexcavating the wet soil and replacing with drier material and/or lime/cement treatment.

9.0 DESIGN-LEVEL INVESTIGATION AND FUTURE SERVICES

Future services should include performing a design-level geotechnical investigation, providing consultation during final design, reviewing the geotechnical aspects of the plans, and providing geotechnical construction observation. Additional investigation, including drilling additional borings, piezometers, and CPTs, will be required to further evaluate subsurface conditions. We may need to develop site-specific response spectra during the design-level geotechnical investigation as part of the California Building Code seismic requirements. In addition, we may need to participate in the peer review process performed by BART, depending on the location of and depth to BART facilities. Consultation, response to peer review comments, and meetings will be required as part of this review process.

Recognizing that construction observation is the final stage of geotechnical design, quality assurance observation during construction by Langan will be necessary to confirm the design assumptions, to maintain our continuity of responsibility on this project, and allow us to make changes to our recommendations, as necessary.

10.0 LIMITATIONS

The conclusions and recommendations presented herein are preliminary. They may be used to estimate costs and for preliminary schematic drawings; these conclusions and recommendations should not be used to develop final plans or drawings. A design-level geotechnical investigation should be performed prior to development of final plans. Our scope of services relates solely to the geotechnical aspects of the proposed development and does not address environmental or other concerns.

Sincerely yours,
Lagan Engineering and Environmental Services, Inc.,

I Not felt by people, except under especially favorable circumstances. However, dizziness or nausea may be experienced.
Sometimes birds and animals are uneasy or disturbed. Trees, structures, liquids, bodies of water may sway gently, and doors may swing very slowly.

II Felt indoors by a few people, especially on upper floors of multi-story buildings, and by sensitive or nervous persons.
As in Grade I, birds and animals are disturbed, and trees, structures, liquids and bodies of water may sway. Hanging objects swing, especially if they are delicately suspended.

III Felt indoors by several people, usually as a rapid vibration that may not be recognized as an earthquake at first. Vibration is similar to that of a light, or lightly loaded trucks, or heavy trucks some distance away. Duration may be estimated in some cases.
Movements may be appreciable on upper levels of tall structures. Standing motor cars may rock slightly.

IV Felt indoors by many, outdoors by a few. Awakens a few individuals, particularly light sleepers, but frightens no one except those apprehensive from previous experience. Vibration like that due to passing of heavy, or heavily loaded trucks. Sensation like a heavy body striking building, or the falling of heavy objects inside.
Dishes, windows and doors rattle; glassware and crockery clink and clash. Walls and house frames creak, especially if intensity is in the upper range of this grade. Hanging objects often swing. Liquids in open vessels are disturbed slightly. Stationary automobiles rock noticeably.

V Felt indoors by practically everyone, outdoors by most people. Direction can often be estimated by those outdoors. Awakens many, or most sleepers. Frightens a few people, with slight excitement; some persons run outdoors.
Buildings tremble throughout. Dishes and glassware break to some extent. Windows crack in some cases, but not generally. Vases and small or unstable objects overturn in many instances, and a few fall. Hanging objects and doors swing generally or considerably. Pictures knock against walls, or swing out of place. Doors and shutters open or close abruptly. Pendulum clocks stop, or run fast or slow. Small objects move, and furnishings may shift to a slight extent. Small amounts of liquids spill from well-filled open containers. Trees and bushes shake slightly.

VI Felt by everyone, indoors and outdoors. Awakens all sleepers. Frightens many people; general excitement, and some persons run outdoors.
Persons move unsteadily. Trees and bushes shake slightly to moderately. Liquids are set in strong motion. Small bells in churches and schools ring. Poorly built buildings may be damaged. Plaster falls in small amounts. Other plaster cracks somewhat. Many dishes and glasses, and a few windows break. Knickknacks, books and pictures fall. Furniture overturns in many instances. Heavy furnishings move.

VII Frightens everyone. General alarm, and everyone runs outdoors.
People find it difficult to stand. Persons driving cars notice shaking. Trees and bushes shake moderately to strongly. Waves form on ponds, lakes and streams. Water is muddied. Gravel or sand stream banks cave in. Large church bells ring. Suspended objects quiver. Damage is negligible in buildings of good design and construction; slight to moderate in well-built ordinary buildings; considerable in poorly built or badly designed buildings, adobe houses, old walls (especially where laid up without mortar), spires, etc. Plaster and some stucco fall. Many windows and some furniture break. Loosened brickwork and tiles shake down. Weak chimneys break at the roofline. Cornices fall from towers and high buildings. Bricks and stones are dislodged. Heavy furniture overturns. Concrete irrigation ditches are considerably damaged.

VIII General fright, and alarm approaches panic.
Persons driving cars are disturbed. Trees shake strongly, and branches and trunks break off (especially palm trees). Sand and mud erupts in small amounts. Flow of springs and wells is temporarily and sometimes permanently changed. Dry wells renew flow. Temperatures of spring and well waters varies. Damage slight in brick structures built especially to withstand earthquakes; considerable in ordinary substantial buildings, with some partial collapse; heavy in some wooden houses, with some tumbling down. Panel walls break away in frame structures. Decayed pilings break off. Walls fall. Solid stone walls crack and break seriously. Wet grounds and steep slopes crack to some extent. Chimneys, columns, monuments and factory stacks and towers twist and fall. Very heavy furniture moves conspicuously or overturns.

IX Panic is general.
Ground cracks conspicuously. Damage is considerable in masonry structures built especially to withstand earthquakes; great in other masonry buildings - some collapse in large part. Some wood frame houses built especially to withstand earthquakes are thrown out of plumb, others are shifted wholly off foundations. Reservoirs are seriously damaged and underground pipes sometimes break.

X Panic is general.
Ground, especially when loose and wet, cracks up to widths of several inches; fissures up to a yard in width run parallel to canal and stream banks. Landsliding is considerable from river banks and steep coasts. Sand and mud shifts horizontally on beaches and flat land. Water level changes in wells. Water is thrown on banks of canals, lakes, rivers, etc. Dams, dikes, embankments are seriously damaged. Well-built wooden structures and bridges are severely damaged, and some collapse. Dangerous cracks develop in excellent brick walls. Most masonry and frame structures, and their foundations are destroyed. Railroad rails bend slightly. Pipe lines buried in earth tear apart or are crushed endwise. Open cracks and broad wavy folds open in cement pavements and asphalt road surfaces.

XI Panic is general.
Disturbances in ground are many and widespread, varying with the ground material. Broad fissures, earth slumps, and land slips develop in soft, wet ground. Water charged with sand and mud is ejected in large amounts. Sea waves of significant magnitude may develop. Damage is severe to wood frame structures, especially near shock centers, great to dams, dikes and embankments, even at long distances. Few if any masonry structures remain standing. Supporting piers or pillars of large, well-built bridges are wrecked. Wooden bridges that "give" are less affected. Railroad rails bend greatly and some thrust endwise. Pipe lines buried in earth are put completely out of service.

XII Panic is general.
Damage is total, and practically all works of construction are damaged greatly or destroyed. Disturbances in the ground are great and varied, and numerous shearing cracks develop. Landslides, rock falls, and slumps in river banks are numerous and extensive. Large rock masses are wrenched loose and torn off. Fault slips develop in firm rock, and horizontal and vertical offset displacements are notable. Water channels, both surface and underground, are disturbed and modified greatly. Lakes are dammed, new waterfalls are produced, rivers are deflected, etc. Surface waves are seen on ground surfaces. Lines of sight and level are distorted. Objects are thrown upward into the air.

Boring terminated at a depth of 99.0 feet below ground surface.
Boring backfilled with cement grout.
Groundwater encountered at 30.0 feet bgs (6/24/22, 9:30am) at time of drilling.
PP = Pocket penetrometer

[1] S&H and SPT blow counts for the last two increments were converted to SPT N-Values using factors of 0.6 and 1.0, respectively, to account for sampler type and hammer energy.
[2] Elevations based on North American Vertical Datum of 1988 (NAVD88), per "Topographic Survey, Tanforan Mall" by BKF, dated 12/23/2021.

UNIFIED SOIL CLASSIFICATION SYSTEM

Major Divisions		Symbols	Typical Names
Coarse-Grained Soils (more than half of soil > no. 200 sieve size)	**Gravels** (More than half of coarse fraction > no. 4 sieve size)	**GW**	Well-graded gravels or gravel-sand mixtures, little or no fines
		GP	Poorly-graded gravels or gravel-sand mixtures, little or no fines
		GM	Silty gravels, gravel-sand-silt mixtures
		GC	Clayey gravels, gravel-sand-clay mixtures
	Sands (More than half of coarse fraction < no. 4 sieve size)	**SW**	Well-graded sands or gravelly sands, little or no fines
		SP	Poorly-graded sands or gravelly sands, little or no fines
		SM	Silty sands, sand-silt mixtures
		SC	Clayey sands, sand-clay mixtures
Fine -Grained Soils (more than half of soil < no. 200 sieve size)	**Silts and Clays** LL = < 50	**ML**	Inorganic silts and clayey silts of low plasticity, sandy silts, gravelly silts
		CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, lean clays
		OL	Organic silts and organic silt-clays of low plasticity
	Silts and Clays LL = > 50	**MH**	Inorganic silts of high plasticity
		CH	Inorganic clays of high plasticity, fat clays
		OH	Organic silts and clays of high plasticity
Highly Organic Soils		**PT**	Peat and other highly organic soils

GRAIN SIZE CHART

Classification	Range of Grain Sizes	
	U.S. Standard Sieve Size	Grain Size in Millimeters
Boulders	Above 12"	Above 305
Cobbles	12" to 3"	305 to 76.2
Gravel	3" to No. 4	76.2 to 4.76
coarse	3" to 3/4"	76.2 to 19.1
fine	3/4" to No. 4	19.1 to 4.76
Sand	No. 4 to No. 200	4.76 to 0.075
coarse	No. 4 to No. 10	4.76 to 2.00
medium	No. 10 to No. 40	2.00 to 0.420
fine	No. 40 to No. 200	0.420 to 0.075
Silt and Clay	Below No. 200	Below 0.075

Unstabilized groundwater level

Stabilized groundwater level

SAMPLE DESIGNATIONS/SYMBOLS

Sample taken with Sprague & Henwood split-barrel sampler with a 3.0-inch outside diameter and a 2.43-inch inside diameter. Darkened area indicates soil recovered

Classification sample taken with Standard Penetration Test sampler

Undisturbed sample taken with thin-walled tube

Disturbed sample, hand auger

Sampling attempted with no recovery

Core sample

Analytical laboratory sample, grab groundwater

Sample taken with Direct Push sampler

Sonic

SAMPLER TYPE

C Core barrel

CA California split-barrel sampler with 2.5-inch outside diameter and a 1.93-inch inside diameter

D&M Dames & Moore piston sampler using 2.5-inch outside diameter, thin-walled tube

O Osterberg piston sampler using 3.0-inch outside diameter, thin-walled Shelby tube

PT Pitcher tube sampler using 3.0-inch outside diameter, thin-walled Shelby tube

S&H Sprague & Henwood split-barrel sampler with a 3.0-inch outside diameter and a 2.43-inch inside diameter

SPT Standard Penetration Test (SPT) split-barrel sampler with a 2.0-inch outside diameter and a 1.5-inch inside diameter

ST Shelby Tube (3.0-inch outside diameter, thin-walled tube)

ABOUT THIS REPORT

The enclosed report presents the results of the site investigation program conducted by ConeTec, Inc. The program consisted of Seismic Piezocone Penetration Testing and Pore Pressure Dissipation Testing. Please note that this report, which also includes all accompanying data, are subject to the 3rd Party Disclaimer and Client Disclaimer that follow in the 'Limitations' section of this report.

Project Information

Client	Langan Engineering
Project	Tanforan Mall Redevelopment
ConeTec Project Number	22-56-24357
Rig Description	30-ton Truck CPT Rig (C-17)

Coordinates

Collection Method	Consumer Grade GPS
EPSG Number	32610 (WGS 84 / UTM 10S)

Cone Penetration Test (CPTu)

Depth Reference	Existing ground surface at the time of the investigation
Sleeve data offset	0.1 Meters

Calculated Geotechnical Parameters Tables

Additional Information	The Normalized Soil Behaviour Type Chart based on Q_{tn} (SBT Q_{tn}) (Robertson, 2009) was used to classify the soil for this project. A detailed set of calculated CPTu parameters have been generated and are provided in Excel format files in the release folder. The CPTu parameter calculations are based on values of corrected tip resistance (q_t) sleeve friction (f_s) and pore pressure (u_2). Effective stresses are calculated based on unit weights that have been assigned to the individual soil behaviour type zones and the assumed equilibrium pore pressure profile. Soils were classified as either drained or undrained based on the Q_{tn} Normalized Soil Behaviour Type Chart (Robertson, 2009). Calculations for both drained and undrained parameters were included for materials that classified as silt mixtures (zone 4).

Please refer to the list of attached documents following the text of this report. A test summary, location map, and plots are included. Thank you for the opportunity to work on this project.

Client Disclaimer

- ConeTec was retained by Langan Engineering
- The “Report” refers to this report titled Tanforan Mall Redevelopment
- ConeTec was retained to collect and provide the raw data (“Data”) which is included in the Report.

ConeTec has collected and reported the Data in accordance with current industry standards. No other warranty, express or implied, with respect to the Data is made by ConeTec. In order to properly understand the Data included in the Report, reference must be made to the documents accompanying and other sources referenced in the Report in their entirety. Other than the Data, the contents of the Report (including any Interpretations) should not be relied upon in any fashion without independent verification and ConeTec is in no way responsible for any loss, damage or expense resulting from the use of, and/or reliance on, such material by any party.

CONTENTS

The following listed below are included in the report:

- **Site Map**
- **Piezocone Penetration Test (CPTu) Sounding Summary**
- **CPTu Standard Plots, Advanced Plots, and Normalized Plots**
- **SBT Zone Scatter Plots**
- **Pore Pressure Dissipation (PPD) Test Summary**
- **PPD Test Plots**
- **Seismic CPTu Results, Plots, and Traces**
- **Methodology Statements**
- **Data File Formats**
- **Description of Methods for Calculated CPT Geotechnical Parameters**

1. The assumed phreatic surface was based off the shallowest pore pressure dissipation tests performed within or nearest the sounding. Hydrostatic conditions were assumed for the calculated parameters.
2. The coordinates were collected using consumer grade GPS equipment. EPSG number: 32610 (WGS84 / UTM Zone 10S).
3. Elevations are referenced to the ground surface and were acquired from the Google Earth Elevation for the recorded coordinates.
4. The assumed phreatic is based on the pore pressure dissipation tests at nearby soundings.

Methodology Statements and Data File Formats

CONETEC

Cone penetration tests (CPTu) are conducted using an integrated electronic piezocone penetrometer and data acquisition system manufactured by Adara Systems Ltd., a subsidiary of ConeTec.

ConeTec's piezocone penetrometers are compression type designs in which the tip and friction sleeve load cells are independent and have separate load capacities. The piezocones use strain gauged load cells for tip and sleeve friction and a strain gauged diaphragm type transducer for recording pore pressure. The piezocones also have a platinum resistive temperature device (RTD) for monitoring the temperature of the sensors, an accelerometer type dual axis inclinometer and two geophone sensors for recording seismic signals. All signals are amplified and measured with minimum sixteen-bit resolution down hole within the cone body, and the signals are sent to the surface using a high bandwidth, error corrected digital interface through a shielded cable.

ConeTec penetrometers are manufactured with various tip, friction and pore pressure capacities in both 10 cm^2 and 15 cm^2 tip base area configurations in order to maximize signal resolution for various soil conditions. The specific piezocone used for each test is described in the CPT summary table presented in the first appendix. The 15 cm^2 penetrometers do not require friction reducers as they have a diameter larger than the deployment rods. The 10 cm^2 piezocones use a friction reducer consisting of a rod adapter extension behind the main cone body with an enlarged cross sectional area (typically 44 millimeters diameter over a length of 32 millimeters with tapered leading and trailing edges) located at a distance of 585 millimeters above the cone tip.

The penetrometers are designed with equal end area friction sleeves, a net end area ratio of 0.8 and cone tips with a 60 degree apex angle.

All ConeTec piezocones can record pore pressure at various locations. Unless otherwise noted, the pore pressure filter is located directly behind the cone tip in the "u_2" position (ASTM Type 2). The filter is six millimeters thick, made of porous plastic (polyethylene) having an average pore size of 125 microns (90-160 microns). The function of the filter is to allow rapid movements of extremely small volumes of water needed to activate the pressure transducer while preventing soil ingress or blockage.

The piezocone penetrometers are manufactured with dimensions, tolerances and sensor characteristics that are in general accordance with the current ASTM D5778 standard. ConeTec's calibration criteria also meets or exceeds those of the current ASTM D5778 standard. An illustration of the piezocone penetrometer is presented in Figure CPTu.

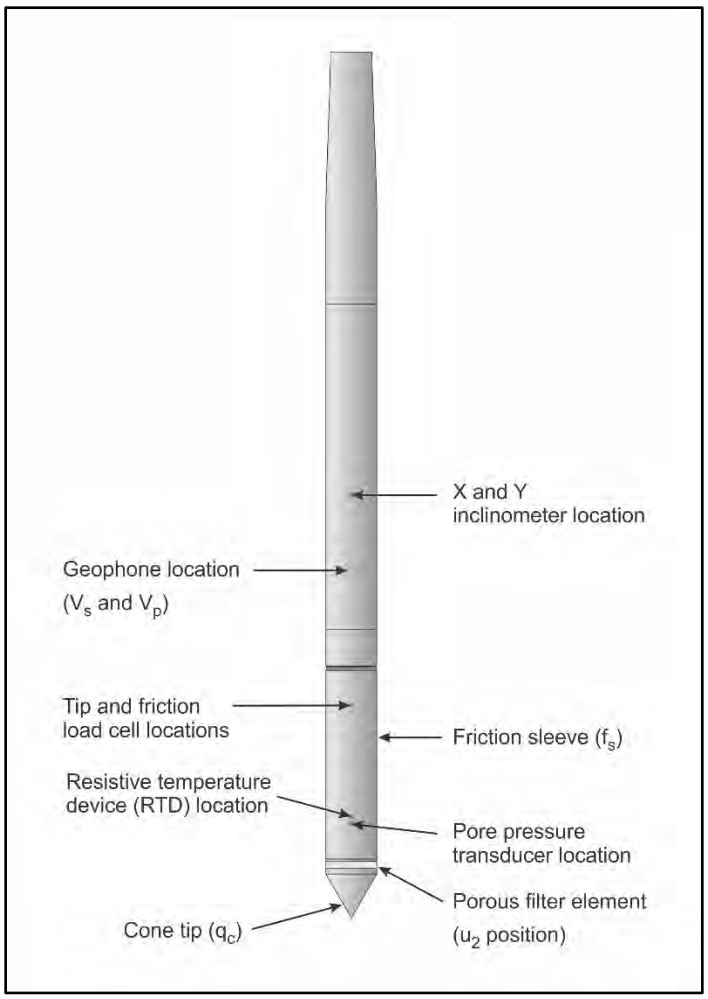

Figure CPTu. Piezocone Penetrometer (15 cm^2)

The ConeTec data acquisition systems consist of a Windows based computer and a signal interface box and power supply. The signal interface combines depth increment signals, seismic trigger signals and the downhole digital data. This combined data is then sent to the Windows based computer for collection and presentation. The data is recorded at fixed depth increments using a depth wheel attached to the push cylinders or by using a spring loaded rubber depth wheel that is held against the cone rods. The typical recording interval is 2.5 centimeters; custom recording intervals are possible.

The system displays the CPTu data in real time and records the following parameters to a storage media during penetration:

- Depth
- Uncorrected tip resistance (q_c)
- Sleeve friction (f_s)
- Dynamic pore pressure (u)
- Additional sensors such as resistivity, passive gamma, ultra violet induced fluorescence, if applicable

All testing is performed in accordance to ConeTec's CPTu operating procedures which are in general accordance with the current ASTM D5778 standard.

Prior to the start of a CPTu sounding a suitable cone is selected, the cone and data acquisition system are powered on, the pore pressure system is saturated with silicone oil and the baseline readings are recorded with the cone hanging freely in a vertical position.

The CPTu is conducted at a steady rate of two centimeters per second, within acceptable tolerances. Typically one meter length rods with an outer diameter of 1.5 inches (38.1 millimeters) are added to advance the cone to the sounding termination depth. After cone retraction final baselines are recorded.

Additional information pertaining to ConeTec's cone penetration testing procedures:

- Each filter is saturated in silicone oil under vacuum pressure prior to use
- Baseline readings are compared to previous readings
- Soundings are terminated at the client's target depth or at a depth where an obstruction is encountered, excessive rod flex occurs, excessive inclination occurs, equipment damage is likely to take place, or a dangerous working environment arises
- Differences between initial and final baselines are calculated to ensure zero load offsets have not occurred and to ensure compliance with ASTM standards

The interpretation of piezocone data for this report is based on the corrected tip resistance (q_t), sleeve friction (f_s) and pore water pressure (u). The interpretation of soil type is based on the correlations developed by Robertson et al. (1986) and Robertson (1990, 2009). It should be noted that it is not always possible to accurately identify a soil behavior type based on these parameters. In these situations, experience, judgment and an assessment of other parameters may be used to infer soil behavior type.

The recorded tip resistance (q_c) is the total force acting on the piezocone tip divided by its base area. The tip resistance is corrected for pore pressure effects and termed corrected tip resistance (q_t) according to the following expression presented in Robertson et al. (1986):

$$q_t = q_c + (1\text{-}a) \bullet u_2$$

where: q_t is the corrected tip resistance
q_c is the recorded tip resistance
u_2 is the recorded dynamic pore pressure behind the tip (u_2 position)
a is the Net Area Ratio for the piezocone (0.8 for ConeTec probes)

The sleeve friction (f_s) is the frictional force on the sleeve divided by its surface area. As all ConeTec piezocones have equal end area friction sleeves, pore pressure corrections to the sleeve data are not required.

The dynamic pore pressure (u) is a measure of the pore pressures generated during cone penetration. To record equilibrium pore pressure, the penetration must be stopped to allow the dynamic pore pressures to stabilize. The rate at which this occurs is predominantly a function of the permeability of the soil and the diameter of the cone.

The friction ratio (R_f) is a calculated parameter. It is defined as the ratio of sleeve friction to the tip resistance expressed as a percentage. Generally, saturated cohesive soils have low tip resistance, high friction ratios and generate large excess pore water pressures. Cohesionless soils have higher tip resistances, lower friction ratios and do not generate significant excess pore water pressure.

A summary of the CPTu soundings along with test details and individual plots are provided in the appendices. A set of files with calculated geotechnical parameters were generated for each sounding based on published correlations and are provided in Excel format in the data release folder. Information regarding the methods used is also included in the data release folder.

For additional information on CPTu interpretations and calculated geotechnical parameters, refer to Robertson et al. (1986), Lunne et al. (1997), Robertson (2009), Mayne (2013, 2014) and Mayne and Peuchen (2012).

Shear wave velocity (Vs) testing is performed in conjunction with the piezocone penetration test (SCPTu) in order to collect interval velocities. For some projects seismic compression wave velocity (Vp) testing is also performed.

ConeTec's piezocone penetrometers are manufactured with one horizontally active geophone (28 hertz) and one vertically active geophone (28 hertz). Both geophones are rigidly mounted in the body of the cone penetrometer, 0.2 meters behind the cone tip. The vertically mounted geophone is more sensitive to compression waves.

Shear waves are typically generated by using an impact hammer horizontally striking a beam that is held in place by a normal load. In some instances, an auger source or an imbedded impulsive source may be used for both shear waves and compression waves. The hammer and beam act as a contact trigger that initiates the recording of the seismic wave traces. For impulsive devices an accelerometer trigger may be used. The traces are recorded in the memory of the cone using a fast analog to digital converter. The seismic trace is then transmitted digitally uphole to a Windows based computer through a signal interface box for recording and analysis. An illustration of the shear wave testing configuration is presented in Figure SCPTu-1.

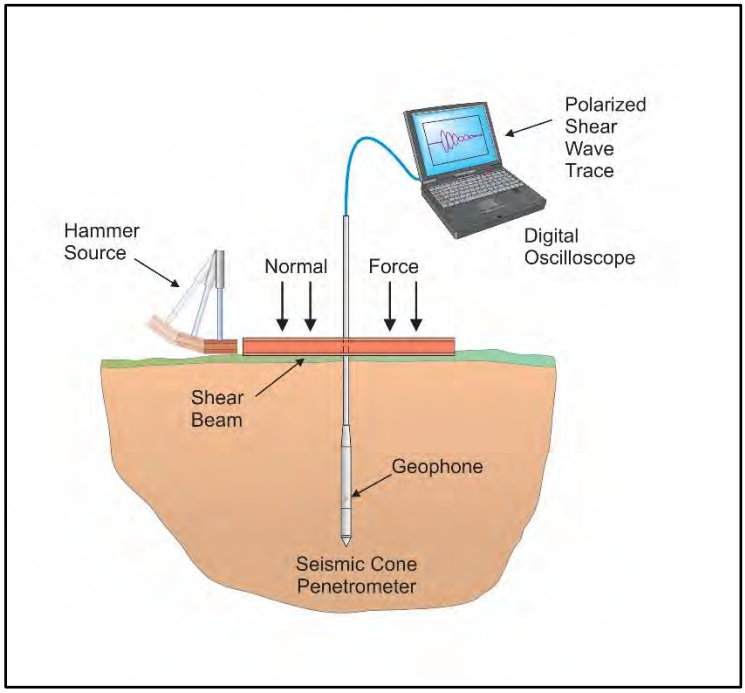

Figure SCPTu-1. Illustration of the SCPTu system

All testing is performed in accordance to ConeTec's SCPTu operating procedures which are in general accordance with the current ASTM D5778 and ASTM D7400 standards.

Prior to the start of a SCPTu sounding, the procedures described in the Cone Penetration Test section are followed. In addition, the active axis of the geophone is aligned parallel to the beam (or source) and the horizontal offset between the cone and the source is measured and recorded.

Prior to recording seismic waves at each test depth, cone penetration is stopped and the rods are decoupled from the rig to avoid transmission of rig energy down the rods. Typically, five wave traces for

each orientation are recorded for quality control and uncertainty analysis purposes. After reviewing wave traces for consistency the cone is pushed to the next test depth (typically one meter intervals or as requested by the client). Figure SCPTu-2 presents an illustration of a SCPTu test.

For additional information on seismic cone penetration testing refer to Robertson et al. (1986).

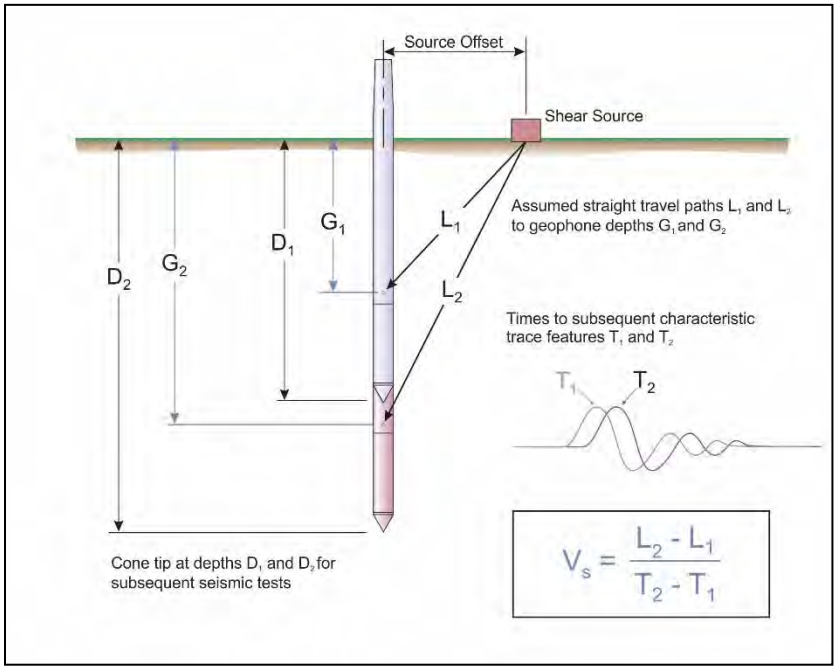

Figure SCPTu-2. Illustration of a seismic cone penetration test

Calculation of the interval velocities are performed by visually picking a common feature (e.g. the first characteristic peak, trough, or crossover) on all of the recorded wave sets and taking the difference in ray path divided by the time difference between subsequent features. Ray path is defined as the straight line distance from the seismic source to the geophone, accounting for beam offset, source depth and geophone offset from the cone tip.

For all SCPTu soundings that have achieved a depth of at least 100 feet (30 meters), the average shear wave velocity to a depth of 100 feet ($\bar{v}_s$) has been calculated and provided for all applicable soundings using the following equation presented in ASCE (2010).

$$\bar{v}_s = \frac{\sum_{i=1}^{n} d_i}{\sum_{i=1}^{n} \frac{d_i}{v_{si}}}$$

where: $\bar{v}_s$ = average shear wave velocity ft/s (m/s)
d_i = the thickness of any layer between 0 and 100 ft (30 m)
v_{si} = the shear wave velocity in ft/s (m/s)
$\sum_{i=1}^{n} d_i$ = the total thickness of all layers between 0 and 100 ft (30 m)

Average shear wave velocity, $\bar{v}_s$ is also referenced to V_{s100} or V_{s30}.

The layer travel times refers to the travel times propagating in the vertical direction, not the measured travel times from an offset source.

Tabular results and SCPTu plots are presented in the relevant appendix.

The cone penetration test is halted at specific depths to carry out pore pressure dissipation (PPD) tests, shown in Figure PPD-1. For each dissipation test the cone and rods are decoupled from the rig and the data acquisition system measures and records the variation of the pore pressure (u) with time (t).

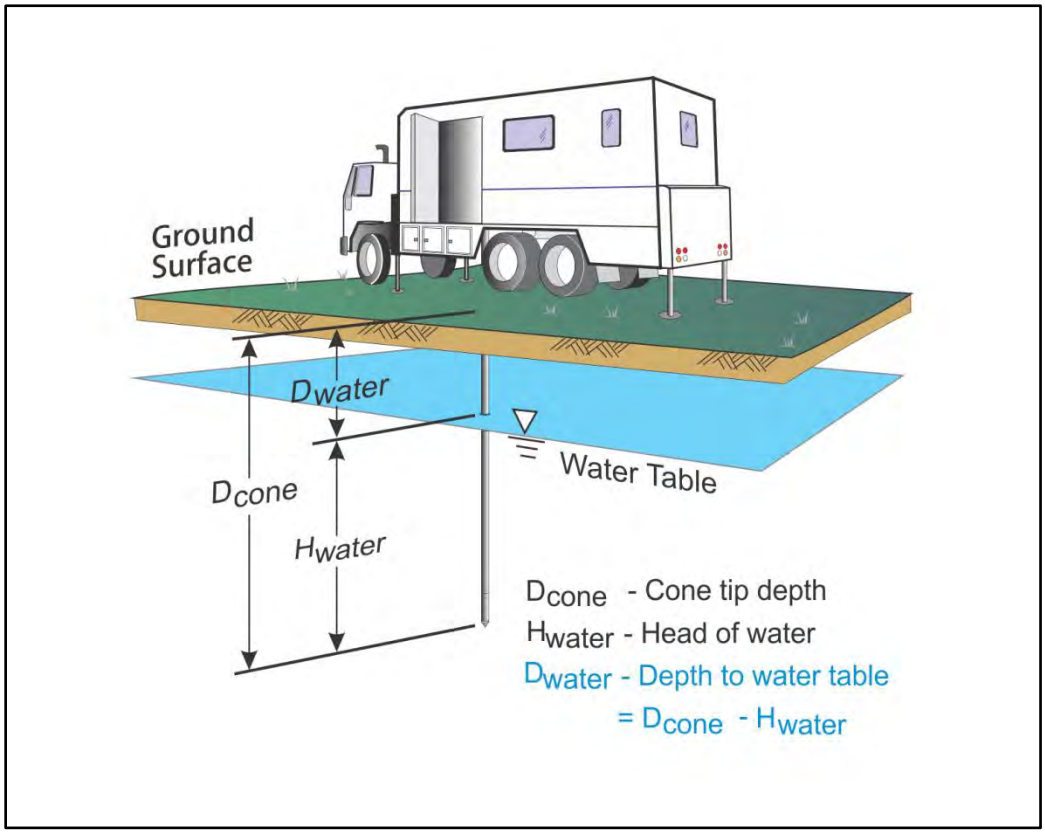

Figure PPD-1. Pore pressure dissipation test setup

Pore pressure dissipation data can be interpreted to provide estimates of ground water conditions, permeability, consolidation characteristics and soil behavior.

The typical shapes of dissipation curves shown in Figure PPD-2 are very useful in assessing soil type, drainage, in situ pore pressure and soil properties. A flat curve that stabilizes quickly is typical of a freely draining sand. Undrained soils such as clays will typically show positive excess pore pressure and have long dissipation times. Dilative soils will often exhibit dynamic pore pressures below equilibrium that then rise over time. Overconsolidated fine-grained soils will often exhibit an initial dilatory response where there is an initial rise in pore pressure before reaching a peak and dissipating.

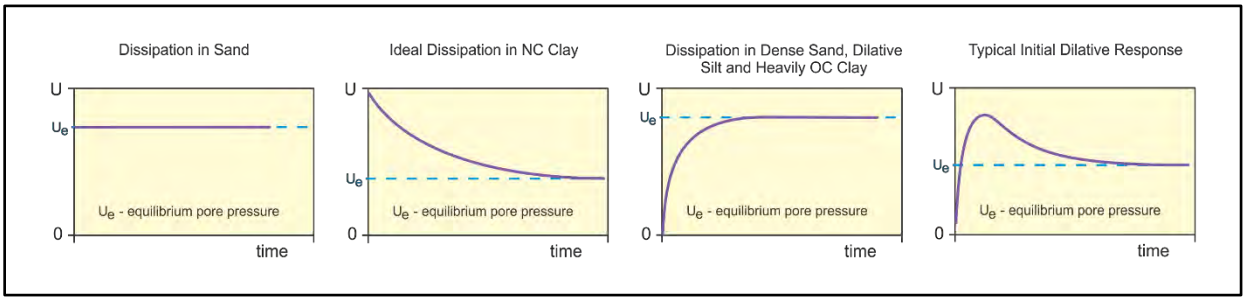

Figure PPD-2. Pore pressure dissipation curve examples

In order to interpret the equilibrium pore pressure (u_{eq}) and the apparent phreatic surface, the pore pressure should be monitored until such time as there is no variation in pore pressure with time as shown for each curve in Figure PPD-2.

In fine grained deposits the point at which 100% of the excess pore pressure has dissipated is known as t_{100}. In some cases this can take an excessive amount of time and it may be impractical to take the dissipation to t_{100}. A theoretical analysis of pore pressure dissipations by Teh and Houlsby (1991) showed that a single curve relating degree of dissipation versus theoretical time factor (T*) may be used to calculate the coefficient of consolidation (c_h) at various degrees of dissipation resulting in the expression for c_h shown below.

$$c_h = \frac{T^* \cdot a^2 \cdot \sqrt{I_r}}{t}$$

Where:
T* is the dimensionless time factor (Table Time Factor)
a is the radius of the cone
I_r is the rigidity index
t is the time at the degree of consolidation

Table Time Factor. T* versus degree of dissipation (Teh and Houlsby (1991))

Degree of Dissipation (%)	20	30	40	50	60	70	80
T* (u_2)	0.038	0.078	0.142	0.245	0.439	0.804	1.60

The coefficient of consolidation is typically analyzed using the time (t_{50}) corresponding to a degree of dissipation of 50% (u_{50}). In order to determine t_{50}, dissipation tests must be taken to a pressure less than u_{50}. The u_{50} value is half way between the initial maximum pore pressure and the equilibrium pore pressure value, known as u_{100}. To estimate u_{50}, both the initial maximum pore pressure and u_{100} must be known or estimated. Other degrees of dissipations may be considered, particularly for extremely long dissipations.

At any specific degree of dissipation the equilibrium pore pressure (u at t_{100}) must be estimated at the depth of interest. The equilibrium value may be determined from one or more sources such as measuring the value directly (u_{100}), estimating it from other dissipations in the same profile, estimating the phreatic surface and assuming hydrostatic conditions, from nearby soundings, from client provided information, from site observations and/or past experience, or from other site instrumentation.

For calculations of c_h (Teh and Houlsby (1991)), t_{50} values are estimated from the corresponding pore pressure dissipation curve and a rigidity index (I_r) is assumed. For curves having an initial dilatory response in which an initial rise in pore pressure occurs before reaching a peak, the relative time from the peak value is used in determining t_{50}. In cases where the time to peak is excessive, t_{50} values are not calculated.

Due to possible inherent uncertainties in estimating I_r, the equilibrium pore pressure and the effect of an initial dilatory response on calculating t_{50}, other methods should be applied to confirm the results for c_h.

Additional published methods for estimating the coefficient of consolidation from a piezocone test are described in Burns and Mayne (1998, 2002), Jones and Van Zyl (1981), Robertson et al. (1992) and Sully et al. (1999).

A summary of the pore pressure dissipation tests and dissipation plots are presented in the relevant appendix.

CONE PENETRATION DIGITAL FILE FORMATS - eSeries

CPT Data Files (COR Extension)

ConeTec CPT data files are stored in ASCII text files that are readable by almost any text editor. ConeTec file names start with the job number (which includes the two digit year number) an underscore as a separating character, followed by two letters based on the type of test and the sounding ID. The last character position is reserved for an identifier letter (such as b, c, d etc) used to uniquely distinguish multiple soundings at the same location. The CPT sounding file has the extension COR. As an example, for job number 21-02-00001 the first CPT sounding will have file name 21-02-00001_CP01.COR

The sounding (COR) file consists of the following components:

1. Two lines of header information
2. Data records
3. End of data marker
4. Units information

Header Lines

Line 1: Columns 1-6 may be blank or may indicate the version number of the recording software
Columns 7-21 contain the sounding Date and Time (Date is MM:DD:YY)
Columns 23-38 contain the sounding Operator
Columns 51-100 contain extended Job Location information

Line 2: Columns 1-16 contain the Job Location
Columns 17-32 contain the Cone ID
Columns 33-47 contain the sounding number
Columns 51-100 may contain extended sounding ID information

Data Records

The data records contain 4 or more columns of data in floating point format. A comma and spaces separate each data item:

Column 1: Sounding Depth (meters)
Column 2: Tip (q_c), recorded in units selected by the operator
Column 3: Sleeve (f_s), recorded in units selected by the operator
Column 4: Dynamic pore pressure (u), recorded in units selected by the operator
Column 5: Empty or may contain other requested data such as Gamma, Resistivity or UVIF data

End of Data Marker

After the last line of data there is a line containing an ASCII 26 (CTL-Z) character (small rectangular shaped character) followed by a newline (carriage return / line feed). This is used to mark the end of data.

Units Information

The last section of the file contains information about the units that were selected for the sounding. A separator bar makes up the first line. The second line contains the type of units used for depth, q_c, f_s and u. The third line contains the conversion values required for ConeTec's software to convert the recorded data to an internal set of base units (bar for q_c, bar for f_s and meters for u). Additional lines intended for internal ConeTec use may appear following the conversion values.

CPT Data Files (XLS Extension)

Excel format files of ConeTec CPT data are also generated from corresponding COR files. The XLS files have the same base file name as the COR file with a -BSC suffix. The information in the file is presented in table format and contains additional information about the sounding such as coordinate information, and tip net area ratio.

The BSCI suffix is given to XLS files which are enhanced versions of the BSC files and include the same data records in addition to inclination data collected for each sounding.

CPT Dissipation Files (XLS Extension)

Pore pressure dissipation files are provided in Excel format and contain each dissipation trace that exceeds a minimum duration (selected during post-processing) formatted column wise within the spreadsheet. The first column (Column A) contains the time in seconds and the second column (Column B) contains the time in minutes. Subsequent columns contain the dissipation trace data. The columns extend to the longest trace of the data set.

Detailed header information is provided at the top of the worksheet. The test depth in meters and feet, the number of points in the trace and the particular units are all presented at the top of each trace column.

CPT Dissipation files have the same naming convention as the CPT sounding files with a "–PPD" suffix.

Data Records

Each file will contain dissipation traces that exceed a minimum duration (selected during post-processing) in a particular column. The dissipation pore pressure values are typically recorded at varying time intervals throughout the trace; rapidly to start and increasing as the duration of the test lengthens. The test depth in meters and feet, the number of points in the trace and the trace number are identified at the top of each trace column.

Cone Type Designations

Cone ID	Cone Description	Tip Cross Sect. Area (cm^2)	Tip Capacity (bar)	Sleeve Area (cm^2)**	Sleeve Capacity (bar)	Pore Pressure Capacity (bar)
EC###	A15T1500F15U35	15	1500	225	15	35

Description of Methods for Calculated CPT Geotechnical Parameters

CONETEC

CALCULATED CPT GEOTECHNICAL PARAMETERS

A Detailed Description of the Methods Used in ConeTec's CPT Geotechnical Parameter Calculation and Plotting Software

Revision SZW-Rev 14

Revised November 26, 2019
Prepared by Jim Greig, M.A.Sc, P.Eng (BC)

Limitations

The geotechnical parameter output was prepared specifically for the site and project named in the accompanying report subject to objectives, site conditions and criteria provided to ConeTec by the client. The output may not be relied upon by any other party or for any other site without the express written permission of ConeTec Group (ConeTec) or any of its affiliates. For this project, ConeTec has provided site investigation services, prepared factual data reporting and produced geotechnical parameter calculations consistent with current best practices. No other warranty, expressed or implied, is made.

To understand the calculations that have been performed and to be able to reproduce the calculated parameters the user is directed to the basic descriptions for the methods in this document and the detailed descriptions and their associated limitations and appropriateness in the technical references cited for each parameter.

ConeTec's Calculated CPT Geotechnical Parameters as of November 26, 2019

ConeTec's CPT parameter calculation and plotting routine provides a tabular output of geotechnical parameters based on current published CPT correlations and is subject to change to reflect the current state of practice. Due to drainage conditions and the basic assumptions and limitations of the correlations, not all geotechnical parameters provided are considered applicable for all soil types. The results are presented only as a guide for geotechnical use and should be carefully examined for consideration in any geotechnical design. Reference to current literature is strongly recommended. ConeTec does not warranty the correctness or the applicability of any of the geotechnical parameters calculated by the program and does not assume liability for any use of the results in any design or review. For verification purposes we recommend that representative hand calculations be done for any parameter that is critical for design purposes. The end user of the parameter output should also be fully aware of the techniques and the limitations of any method used by the program. The purpose of this document is to inform the user as to which methods were used and to direct the end user to the appropriate technical papers and/or publications for further reference.

The geotechnical parameter output was prepared specifically for the site and project named in the accompanying report subject to objectives, site conditions and criteria provided to ConeTec by the client. The output may not be relied upon by any other party or for any other site without the express written permission of ConeTec Group (ConeTec) or any of its affiliates.

The CPT calculations are based on values of tip resistance, sleeve friction and pore pressures considered at each data point or averaged over a user specified layer thickness (e.g. 0.20 m). Note that q_t is the tip resistance corrected for pore pressure effects and q_c is the recorded tip resistance. The corrected tip resistance (corrected using u_2 pore pressure values) is used for all of the calculations. Since all ConeTec cones have equal end area friction sleeves pore pressure corrections to sleeve friction, f_s, are not required.

The tip correction is: $q_t = q_c + (1-a) \bullet u_2$ (consistent units are implied)

where: q_t is the corrected tip resistance
q_c is the recorded tip resistance
u_2 is the recorded dynamic pore pressure behind the tip (u_2 position)
a is the Net Area Ratio for the cone (typically 0.80 for ConeTec cones)

The total stress calculations are based on soil unit weight values that have been assigned to the Soil Behavior Type (SBT) zones, from a user defined unit weight profile, by using a single uniform value throughout the profile, through unit weight estimation techniques described in various technical papers or from a combination of these methods. The parameter output files indicate the method(s) used.

Effective vertical overburden stresses are calculated based on a hydrostatic distribution of equilibrium pore pressures below the water table or from a user defined equilibrium pore pressure profile (typically obtained from CPT dissipation tests) or a combination of the two. For over water projects the stress effects of the column of water above the mudline have been taken into account as has the appropriate unit weight of water. How this is done depends on where the instruments were zeroed (i.e. on deck or at the mudline). The parameter output files indicate the method(s) used.

A majority of parameter calculations are derived or driven by results based on material types as determined by the various soil behavior type charts depicted in Figures 1 through 5. The parameter output files indicate the method(s) used.

The Soil Behavior Type classification chart shown in Figure 1 is the classic non-normalized SBT Chart developed at the University of British Columbia and reported in Robertson, Campanella, Gillespie and Greig (1986). Figure 2 shows the original normalized (linear method) SBT chart developed by Robertson (1990). The Bq classification charts shown in Figures 3a and 3b incorporate pore pressures into the SBT classification and are based on the methods described in Robertson (1990). Many of these charts have been summarized in Lunne, Robertson and Powell (1997). The

Jefferies and Davies SBT chart shown in Figure 3c is based on the techniques discussed in Jefferies and Davies (1993) which introduced the concept of the Soil Behavior Type Index parameter, I_c. Please note that the I_c parameter developed by Robertson and Fear (1995) and Robertson and Wride (1998) is similar in concept but uses a slightly different calculation method than that used by Jefferies and Davies (1993) as the latter incorporates pore pressure in their technique through the use of the Bq parameter. The normalized Qtn SBT chart shown in Figure 4 is based on the work by Robertson (2009) utilizing a variable stress ratio exponent, n, for normalization based on a slightly modified redefinition and iterative approach for I_c. The boundary curves drawn on the chart are based on the work described in Robertson (2010).

Figure 5 shows a revised behavior based chart by Robertson (2016) depicting contractive-dilative zones. As the zones represent material behavior rather than soil gradation ConeTec has chosen a set of zone colors that are less likely to be confused with material type colors from previous SBT charts. These colors differ from those used by Dr. Robertson.

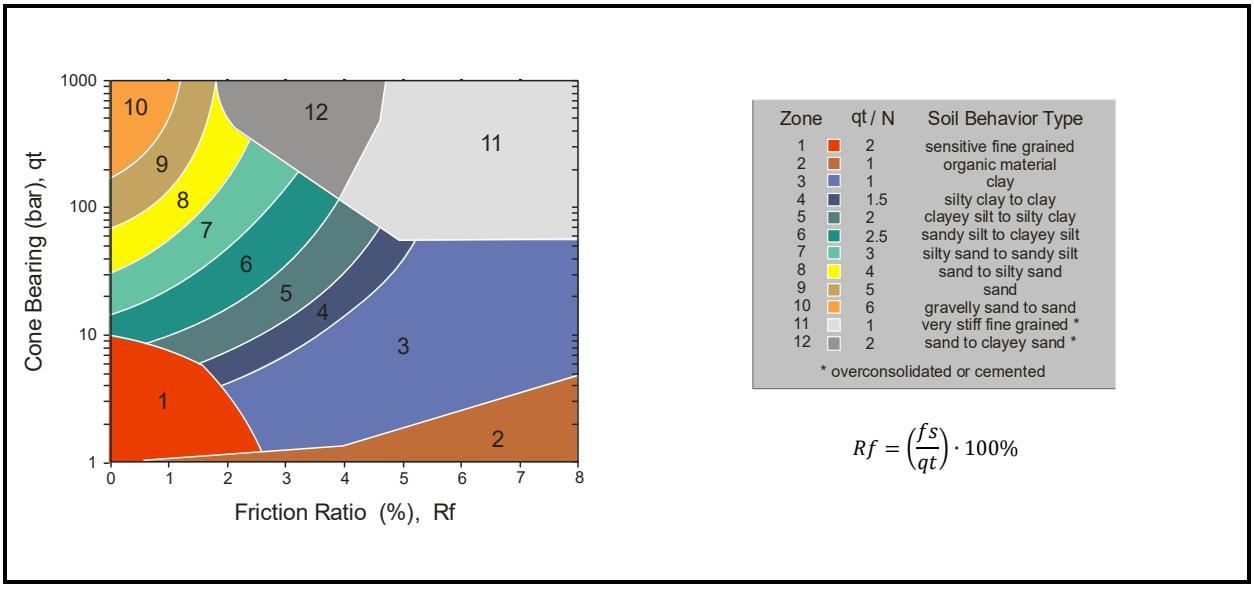

Figure 1. Non-Normalized Soil Behavior Type Classification Chart (SBT)

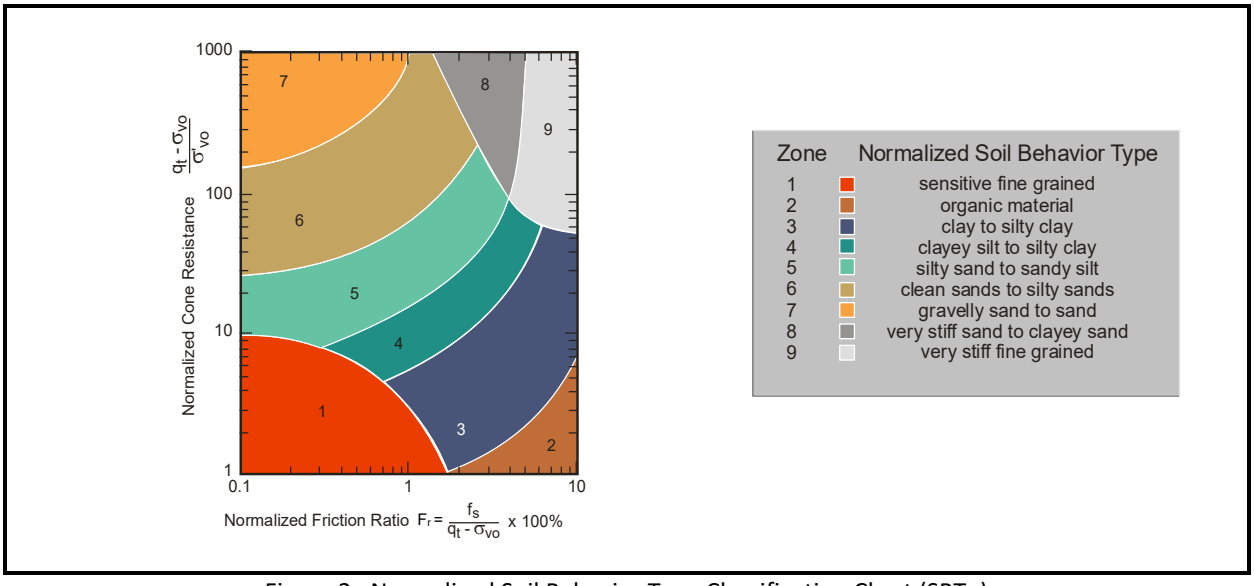

Figure 2. Normalized Soil Behavior Type Classification Chart (SBTn)

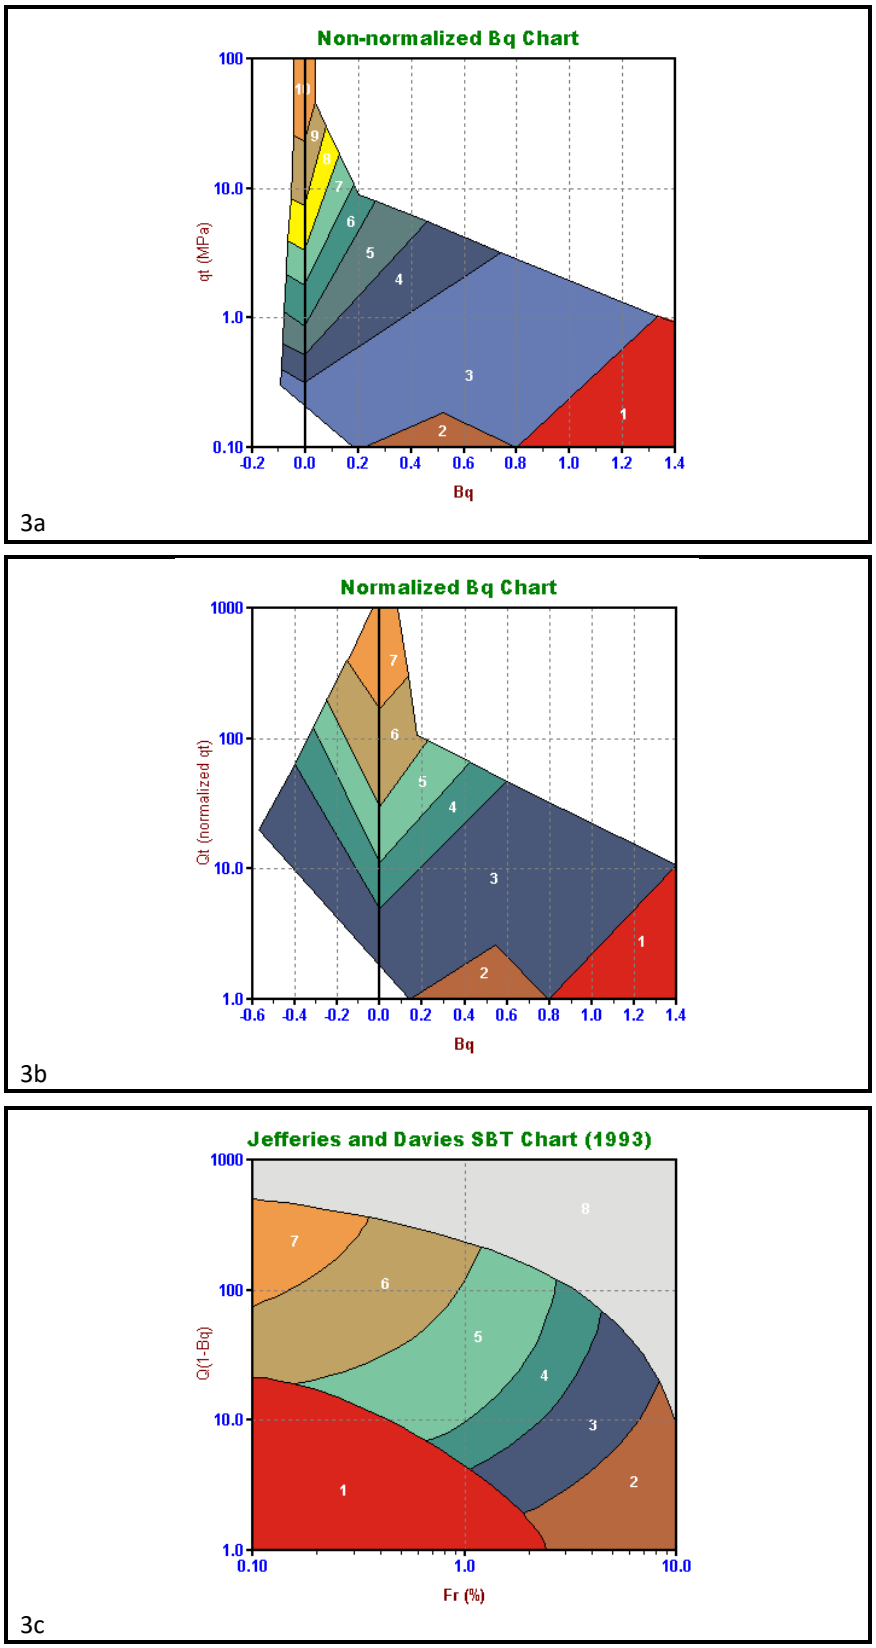

Figure 3. Alternate Soil Behavior Type Charts

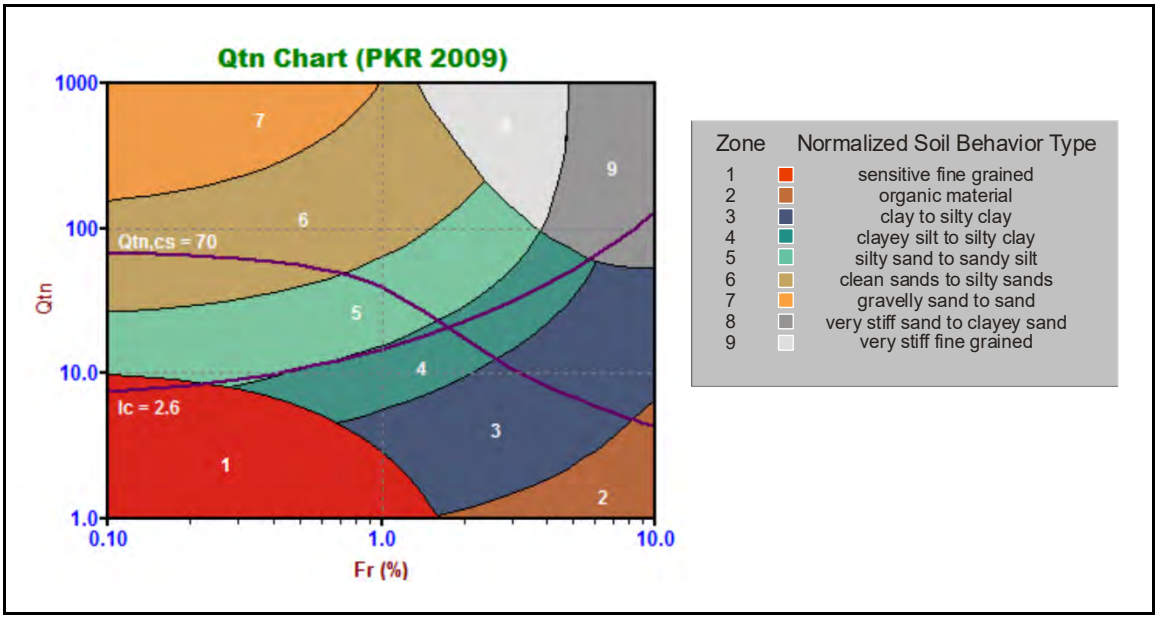

Figure 4. Normalized Soil Behavior Type Chart using Q_{tn} (SBT Qtn)

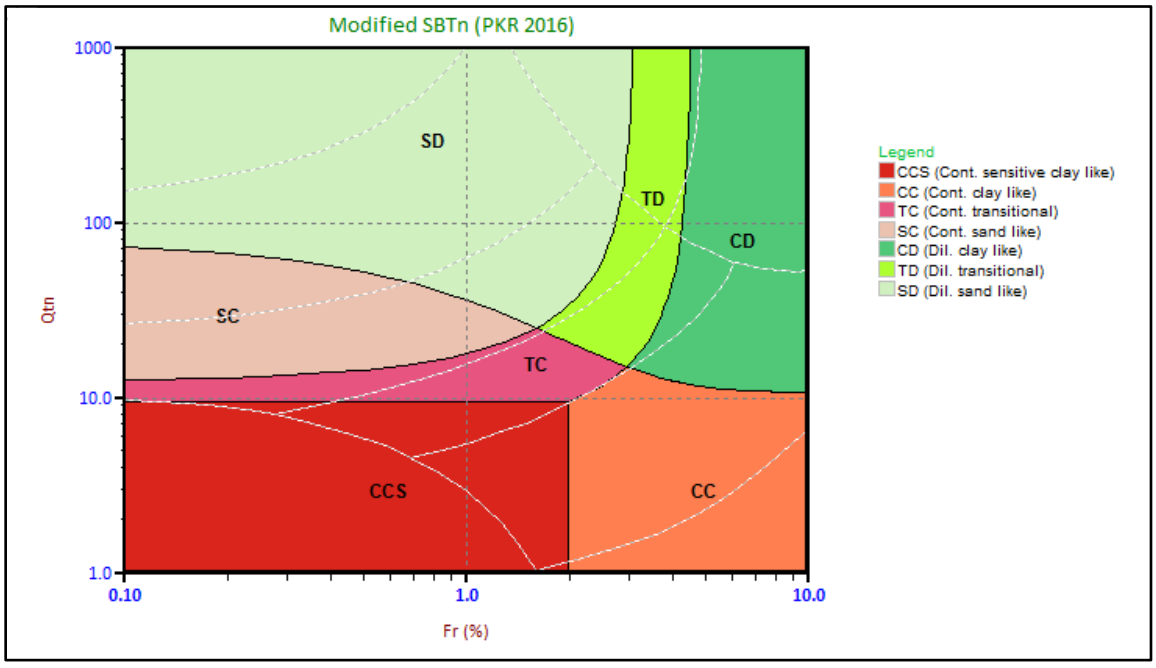

Figure 5. Modified SBTn Behavior Based Chart

Details regarding the geotechnical parameter calculations are provided in Tables 1a and 1b. The appropriate references cited are listed in Table 2. Non-liquefaction specific parameters are detailed in Table 1a and liquefaction specific parameters are detailed in Table 1b.

Where methods are based on charts or techniques that are too complex to describe in this summary the user should refer to the cited material. Specific limitations for each method are described in the cited material.

Where the results of a calculation/correlation are deemed *'invalid'* the value will be represented by the text strings "-9999", "-9999.0", the value 0.0 (Zero) or an empty cell. Invalid results will occur because of (and not limited to) one or a combination of:

1. Invalid or undefined CPT data (e.g. drilled out section or data gap).
2. Where the calculation method is inappropriate, for example, drained parameters in a material behaving as an undrained material (and vice versa).
3. Where input values are beyond the range of the referenced charts or specified limitations of the correlation method.
4. Where pre-requisite or intermediate parameter calculations are invalid.

The parameters selected for output from the program are often specific to a particular project. As such, not all of the calculated parameters listed in Table 1 may be included in the output files delivered with this report.

The output files are typically provided in Microsoft Excel XLS or XLSX format. The ConeTec software has several options for output depending on the number or types of calculated parameters desired or requested by the client. Each output file is named using the original COR file base name followed by a three or four letter indicator of the output set selected (e.g. BSC, TBL, NLI, NL2, IFI, IFI2) and possibly followed by an operator selected suffix identifying the characteristics of the particular calculation run.

Table 1a. CPT Parameter Calculation Methods – Non liquefaction Parameters

Calculated Parameter	Description	Equation	Ref
Depth	Mid Layer Depth *(where calculations are done at each point then Mid Layer Depth = Recorded Depth)*	*[Depth (Layer Top) + Depth (Layer Bottom)]/ 2.0*	CK*
Elevation	Elevation of Mid Layer based on sounding collar elevation supplied by client or through site survey	Elevation = Collar Elevation - Depth	CK*
Avg qc	Averaged recorded tip value (q_c)	$Avgqc = \frac{1}{n}\sum_{i=1}^{n} q_c$ *n=1 when calculations are done at each point*	CK*
Avg qt	Averaged corrected tip (q_t) where: $q_t = q_c + (1-a) \bullet u_2$	$Avgqt = \frac{1}{n}\sum_{i=1}^{n} q_t$ *n=1 when calculations are done at each point*	1
Avg fs	Averaged sleeve friction (f_s)	$Avgfs = \frac{1}{n}\sum_{i=1}^{n} fs$ *n=1 when calculations are done at each point*	CK*
Avg Rf	Averaged friction ratio (R_f) where friction ratio is defined as: $Rf = 100\% \bullet \frac{fs}{q_t}$	$AvgRf = 100\% \cdot \frac{Avgfs}{Avgqt}$ *n=1 when calculations are done at each point*	CK*
Avg u	Averaged dynamic pore pressure *(u)*	$Avgu = \frac{1}{n}\sum_{i=1}^{n} u_i$ *n=1 when calculations are done at each point*	CK*

Calculated Parameter	Description	Equation	Ref
Avg Res	Averaged Resistivity (this data is not always available since it is a specialized test requiring an additional module)	$AvgRes = \frac{1}{n}\sum_{i=1}^{n} Resistivity_i$ *n=1 when calculations are done at each point*	CK*
Avg UVIF	Averaged UVIF ultra-violet induced fluorescence (this data is not always available since it is a specialized test requiring an additional module)	$AvgUVIF = \frac{1}{n}\sum_{i=1}^{n} UVIF_i$ *n=1 when calculations are done at each point*	CK*
Avg Temp	Averaged Temperature (this data is not always available since it requires specialized calibrations)	$AvgTemp = \frac{1}{n}\sum_{i=1}^{n} Temperature_i$ *n=1 when calculations are done at each point*	CK*
Avg Gamma	Averaged Gamma Counts (this data is not always available since it is a specialized test requiring an additional module)	$AvgGamma = \frac{1}{n}\sum_{i=1}^{n} Gamma_i$ *n=1 when calculations are done at each point*	CK*
SBT	Soil Behavior Type as defined by Robertson et al 1986 (often referred to as Robertson and Campanella, 1986)	See Figure 1	1, 5
SBTn	Normalized Soil Behavior Type as defined by Robertson 1990 (linear normalization)	See Figure 2	2, 5
SBT-Bq	Non-normalized Soil Behavior type based on the Bq parameter	See Figure 3	1, 2, 5
SBT-Bqn	Normalized Soil Behavior based on the Bq parameter	See Figure 3	2, 5
SBT-JandD	Soil Behavior Type as defined by Jeffries and Davies	See Figure 3	7
SBT Qtn	Soil Behavior Type as defined by Robertson (2009) using a variable stress ratio exponent for normalization based on I_c	See Figure 4	15
Modified SBTn (contractive /dilative)	Modified SBTn chart as defined by Robertson (2016) indicating zones of contractive/dilative behavior.	See Figure 5	30
Unit Wt.	Unit Weight of soil determined from one of the following user selectable options: 1) uniform value 2) value assigned to each SBT zone 3) value assigned to each SBTn zone 4) value assigned to SBTn zone as determined from Robertson and Wride (1998) based on q_{c1n} 5) values assigned to SBT Qtn zones 6) Mayne fs (sleeve friction) method 7) Robertson 2010 method 8) user supplied unit weight profile The last option may co-exist with any of the other options	See references	3, 5, 15, 21, 24, 29

Calculated Parameter	Description	Equation	Ref
TStress σ_v	Total vertical overburden stress at Mid Layer Depth *A layer is defined as the averaging interval specified by the user where depths are reported at their respective mid-layer depth.* *For data calculated at each point layers are defined using the recorded depth as the mid-point of the layer. Thus, a layer starts half-way between the previous depth and the current depth unless this is the first point in which case the layer start is at zero depth. The layer bottom is half-way from the current depth to the next depth unless it is the last data point.* *Defining layers affects how stresses are calculated since the unit weight attributed to a data point is used throughout the entire layer. This means that to calculate the stresses the total stress at the top and bottom of a layer are required. The stress at mid layer is determined by adding the incremental stress from the layer top to the mid-layer depth. The stress at the layer bottom becomes the stress at the top of the subsequent layer. Stresses are NOT calculated from mid-point to mid-point.* *For over-water work the total stress due to the column of water above the mud line is taken into account where appropriate.*	$TStress = \sum_{i=1}^{n} \gamma_i h_i$ *where* γ_i is layer unit weight h_i is layer thickness	CK*
EStress σ_v'	Effective vertical overburden stress at mid-layer depth	$\sigma_v' = \sigma_v - u_{eq}$	CK*
Equil u u_{eq} or u_0	Equilibrium pore pressure determined from one of the following user selectable options: 1) hydrostatic below water table 2) user supplied profile 3) combination of those above When a user supplied profile is used/provided a linear interpolation is performed between equilibrium pore pressures defined at specific depths. If the profile values start below the water table then a linear transition from zero pressure at the water table to the first defined pointed is used. Equilibrium pore pressures may come from dissipation tests, adjacent piezometers or other sources. Occasionally, an extra equilibrium point ("assumed value") will be provided in the profile that does not come from a recorded value to smooth out any abrupt changes or to deal with material interfaces. These "assumed" values will be indicated on our plots and in tabular summaries.	For hydrostatic option: $u_{eq} = \gamma_w \cdot (D - D_{wt})$ where u_{eq} is equilibrium pore pressure γ_w is unit weight of water D is the current depth D_{wt} is the depth to the water table	CK*
K_0	Coefficient of earth pressure at rest, K_0	$K_0 = (1 - \sin\Phi') OCR^{\sin\Phi'}$	17
C_n	Overburden stress correction factor used for $(N_1)_{60}$ and older CPT parameters	$C_n = (P_a/\sigma_v')^{0.5}$ where $0.0 < C_n < 2.0$ *(user adjustable, typically 1.7)* P_a *is atmospheric pressure (100 kPa)*	12
C_q	Overburden stress normalizing factor	$C_q = 1.8 / (0.8 + (\sigma_v'/P_a))$ where $0.0 < C_q < 2.0$ *(user adjustable)* P_a *is atmospheric pressure (100 kPa)*	3, 12

Calculated Parameter	Description	Equation	Ref
N_{60}	SPT N value at 60% energy calculated from q_t/N ratios assigned to each SBT zone. This method has abrupt N value changes at zone boundaries.	*See Figure 1*	5
(N1)60	SPT N_{60} value corrected for overburden pressure	$(N_1)_{60} = C_n \bullet N_{60}$	4
N60Ic	SPT N_{60} values based on the I_c parameter [as defined by Roberston and Wride 1998 (5), or by Robertson 2009 (15)].	$(q_t/P_a)/ N_{60} = 8.5 (1 – I_c/4.6)$ $(q_t/P_a)/ N_{60} = 10^{(1.1268 – 0.2817Ic)}$ Pa being atmospheric pressure	5 15, 31
(N1)60Ic	SPT N_{60} value corrected for overburden pressure (using N_{60} I_c). User has 3 options.	1) $(N_1)_{60}Ic = C_n \bullet (N_{60} I_c)$ 2) $q_{c1n}/ (N_1)_{60}I_c = 8.5 (1 – I_c/4.6)$ 3) $(Q_{tn})/ (N_1)_{60}I_c = 10^{(1.1268 – 0.2817Ic)}$	4 5 15, 31
Su or Su (Nkt)	Undrained shear strength based on q_t S_u factor N_{kt} is user selectable	$Su = \frac{qt - \sigma_v}{N_{kt}}$	1, 5
Su or Su (Ndu)	Undrained shear strength based on pore pressure S_u factor $N_{\Delta u}$ is user selectable	$Su = \frac{u_2 - u_{eq}}{N_{\Delta u}}$	1, 5
Dr	Relative Density determined from one of the following user selectable options: a) Ticino Sand b) Hokksund Sand c) Schmertmann (1978) d) Jamiolkowski (1985) - All Sands e) Jamiolkowski et al (2003) (various compressibilities, K_o)	See reference (methods a through d) Jamiolkowski et al (2003) reference	5 14
PHI ϕ	Friction Angle determined from one of the following user selectable options (methods a through d are for sands and method e is for silts and clays): a) Campanella and Robertson b) Durgunoglu and Mitchel c) Janbu d) Kulhawy and Mayne e) NTH method (clays and silts)	See appropriate reference	5 5 5 11 23
Delta U/qt	Differential pore pressure ratio (older parameter used before B_q was established)	$= \frac{\Delta u}{qt}$ *where:* $\Delta u = u - u_{eq}$ *and* u = *dynamic pore pressure* u_{eq} = *equilibrium pore pressure*	CK*
Bq	Pore pressure parameter	$Bq = \frac{\Delta u}{qt - \sigma_v}$ where : $\Delta u = u - u_{eq}$ *and* u = *dynamic pore pressure* u_{eq} = *equilibrium pore pressure*	1, 2, 5
Net qt or qtNet	Net tip resistance (used in many subsequent correlations)	$qt - \sigma_v$	CK*
qe	Effective tip resistance (using the dynamic pore pressure u_2 and not equilibrium pore pressure)	$qt - u_2$	CK*

Calculated Parameter	Description	Equation	Ref
qeNorm	Normalized effective tip resistance	$\frac{qt-u_2}{\sigma_v}$	CK*
Q_t or Norm: Qt	Normalized q_t for Soil Behavior Type classification as defined by Robertson (1990) using a linear stress normalization. Note this is different from Q_{tn}.	$Qt=\frac{qt-\sigma_v}{\sigma_v}$	2, 5
F_r or Norm: Fr	Normalized Friction Ratio for Soil Behavior Type classification as defined by Robertson (1990)	$Fr=100\%\cdot\frac{fs}{qt-\sigma_v}$	2, 5
Q(1-Bq)	Q(1-Bq) grouping as suggested by Jefferies and Davies for their classification chart and the establishment of their I_c parameter	$Q\cdot(1-Bq)$ *where Bq is defined as above and Q is the same as the normalized tip resistance, Q_t, defined above*	6, 7
qc1	Normalized tip resistance, q_{c1}, using a fixed stress ratio exponent, n (this method has stress units)	$q_{c1} = q_t \cdot (Pa/\sigma_v')^{0.5}$ where: Pa = atmospheric pressure	21
qc1 (0.5)	Normalized tip resistance, q_{c1}, using a fixed stress ratio exponent, n (this method is unit-less)	$q_{c1}\ (0.5)= (q_t/P_a) \cdot (Pa/\sigma_v')^{0.5}$ where: Pa = atmospheric pressure	5
qc1 (Cn)	Normalized tip resistance, q_{c1}, based on C_n (this method has stress units)	$q_{c1}(Cn) = C_n * q_t$	5, 12
qc1 (Cq)	Normalized tip resistance, q_{c1}, based on C_q (this method has stress units)	$q_{c1}\ (Cq)= C_q * q_t$ (some papers use q_c)	5, 12
qc1n	normalized tip resistance, q_{c1n}, using a variable stress ratio exponent, n (where n=0.0, 0.70, 1.0) (this method is unit-less)	$q_{c1n} = (q_t / P_a)(P_a/\sigma_v')^n$ where: P_a = atm. Pressure and n varies as described below	3, 5
I_c or Ic (RW1998)	Soil Behavior Type Index as defined by Robertson and Fear (1995) and Robertson and Wride (1998) for estimating grain size characteristics and providing smooth gradational changes across the SBTn chart	$I_c = [(3.47 - \log_{10}Q)^2 + (\log_{10} Fr + 1.22)^2\ ]^{0.5}$ *Where:* $Q=\left(\frac{qt-\sigma_v}{P_a}\right)\left(\frac{P_a}{\sigma_v'}\right)^n$ *Or* $Q=q_{c1n}=\left(\frac{qt}{P_a}\right)\left(\frac{P_a}{\sigma_v'}\right)^n$ *depending on the iteration in determining I_c* *And* *Fr is in percent* *P_a = atmospheric pressure* *n varies between 0.5, 0.70 and 1.0 and is selected in an iterative manner based on the resulting I_c*	3, 5, 21
Ic (PKR 2009)	Soil Behavior Type Index, I_c (PKR 2009) based on a variable stress ratio exponent n, which itself is based on I_c (PKR 2009). An iterative calculation is required to determine Ic (PKR 2009) and its corresponding n (PKR 2009).	I_c (PKR 2009) = $[(3.47 - \log_{10}Q_{tn})^2 + (1.22 + \log_{10}F_r)^2]^{0.5}$	15

Calculated Parameter	Description	Equation	Ref
n (PKR 2009)	Stress ratio exponent n, based on I_c (PKR 2009). An iterative calculation is required to determine n (PKR 2009) and its corresponding Ic (PKR 2009).	*n (PKR 2009) = 0.381 (I_c) + 0.05 (σ_v'/P_a) – 0.15*	15
Qtn (PKR 2009)	Normalized tip resistance using a variable stress ratio exponent based on I_c (PKR 2009) and n (PKR 2009). An iterative calculation is required to determine Qtn (PKR 2009).	$Q_{tn} = [(qt - \sigma_v)/P_a](P_a/\sigma_v')^n$ *where P_a = atmospheric pressure (100 kPa)* *n = stress ratio exponent described above*	15
FC	Apparent fines content (%)	*FC=1.75($Ic^{3.25}$) - 3.7* *FC=100 for $I_c > 3.5$* *FC=0 for $I_c < 1.26$* *FC = 5% if 1.64 < I_c < 2.6 AND F_r<0.5*	3
I_c Zone	This parameter is the Soil Behavior Type zone based on the I_c parameter (valid for zones 2 through 7 on SBTn or SBT Qtn charts)	$I_c < 1.31$ Zone = 7 $1.31 < I_c < 2.05$ Zone = 6 $2.05 < I_c < 2.60$ Zone = 5 $2.60 < I_c < 2.95$ Zone = 4 $2.95 < I_c < 3.60$ Zone = 3 $I_c > 3.60$ Zone = 2	3
State Param or State Parameter or ψ	The state parameter index, ψ, is defined as the difference between the current void ratio, e, and the critical void ratio, e_c. Positive ψ - contractive soil Negative ψ - dilative soil This is based on the work by Been and Jefferies (1985) and Plewes, Davies and Jefferies (1992) - vertical effective stress is used rather than a mean normal stress	See reference	6, 8
Yield Stress σ_p'	Yield stress is calculated using the following methods a) General method b) 1st order approximation using q_tNet (clays) c) 1st order approximation using Δu_2 (clays) d) 1st order approximation using q_e (clays)	All stresses in kPa a) $\sigma_p' = 0.33 \cdot (q_t - \sigma_v)^{m'} (\sigma_{atm}/100)^{1-m'}$ where $m' = 1 - \frac{0.28}{1 + (I_c/2.65)^{25}}$ b) $\sigma_p' = 0.33 \cdot (q_t - \sigma_v)$ c) $\sigma_p' = 0.54 \cdot (\Delta u_2)$ $\Delta u_2 = u_2 - u_0$ d) $\sigma_p' = 0.60 \cdot (q_t - u_2)$	19 20 20 20
OCR OCR(JS1978) OCR(Mayne2014) OCR (qtNet) OCR (deltaU) OCR (qe) OCR (Vs) OCR (PKR2015)	Over Consolidation Ratio based on a) Schmertmann (1978) method involving a plot plot of S_u/σ_v' /($S_u/\sigma_v')_{NC}$ and OCR b) based on Yield stresses described above c) approximate version based on qtNet d) approximate version based on Δu e) approximate version based on effective tip, q_e f) approximate version based on shear wave velocity, V_s g) based on Qt	 a) requires a user defined value for NC Su/P_c' ratio b through f) *based on yield stresses* g) $OCR = 0.25 \cdot (Qt)^{1.25}$	 9 19 20 20 20 18 32

Calculated Parameter	Description	Equation	Ref
Es/qt	Intermediate parameter for calculating Young's Modulus, E, in sands. It is the Y axis of the reference chart.	Based on Figure 5.59 in the reference	5
Es Young's Modulus E	Young's Modulus based on the work done in Italy. There are three types of sands considered in this technique. The user selects the appropriate type for the site from: a) OC Sands b) Aged NC Sands c) Recent NC Sands Each sand type has a family of curves that depend on mean normal stress. The program calculates mean normal stress and linearly interpolates between the two extremes provided in the E_s/q_t chart. Es is evaluated for an axial strain of 0.1%.	Mean normal stress is evaluated from: $\sigma'_m = \frac{1}{3}(\sigma'_v + \sigma'_h + \sigma'_h)^3$ where σ_v'= vertical effective stress σ_h'= horizontal effective stress *and* $\sigma_h = K_o \bullet \sigma_v'$ with K_o assumed to be 0.5	5
Delta U/TStress	Differential pore pressure ratio with respect to total stress	$= \frac{\Delta u}{\sigma_v}$ *where:* $\Delta u = u - u_{eq}$	CK*
Delta U/Estress, P Value, Excess Pore Pressure Ratio	Differential pore pressure ratio with respect to effective stress. Key parameter (P, Normalized Pore Pressure Parameter, Excess Pore Pressure Ratio) in the Winckler et. al. static liquefaction method.	$= \frac{\Delta u}{\sigma'_v}$ *where:* $\Delta u = u - u_{eq}$	25, 25a, CK*
Su/EStress	Undrained shear strength ratio with respect to vertical effective overburden stress using the S_u (N_{kt}) method	$= Su\ (N_{kt}) / \sigma_v'$	CK*
Gmax	G_{max} determined from SCPT shear wave velocities (not estimated values)	$G_{max} = \rho V_s^2$ where ρ is the mass density of the soil determined from the estimated unit weights at each test depth	27
qtNet/Gmax	Net tip resistance ratio with respect to the small strain modulus G_{max} determined from SCPT shear wave velocities (not estimated values)	$= (qt - \sigma_v) / G_{max}$ where $G_{max} = \rho V_s^2$ and ρ is the mass density of the soil determined from the estimated unit weights at each test depth	15, 28, 30

*CK – common knowledge

Table 1b. CPT Parameter Calculation Methods – Liquefaction Parameters

Calculated Parameter	Description	Equation	Ref
K_{SPT}	Equivalent clean sand factor for $(N_1)60$	$K_{SPT} = 1 + ((0.75/30) \bullet (FC - 5))$	10
K_{CPT} or K_C (RW1998)	Equivalent clean sand correction for q_{c1N}	$K_{cpt} = 1.0$ for $I_c \leq 1.64$ $K_{cpt} = f(I_c)$ for $I_c > 1.64$ (see reference) $K_c = -0.403\ I_c^4 + 5.581\ I_c^3 - 21.63 I_c^2 + 33.75\ I_c - 17.88$	3, 10
Kc (PKR 2010)	Clean sand equivalent factor to be applied to Q_{tn}	$K_c = 1.0$ for $I_c \leq 1.64$ $K_c = -0.403\ I_c^4 + 5.581\ I_c^3 - 21.63 I_c^2 + 33.75\ I_c - 17.88$ for $I_c > 1.64$	16
$(N_1)_{60cs}Ic$	Clean sand equivalent SPT $(N_1)_{60}I_c$. User has 3 options.	1) $(N_1)_{60cs}Ic = \alpha + \beta((N_1)_{60}I_c)$ 2) $(N_1)_{60cs}Ic = K_{SPT} * ((N_1)_{60}I_c)$ 3) $(q_{c1ncs})/(N_1)_{60cs}I_c = 8.5\ (1 - I_c/4.6)$ FC ≤ 5%: $\alpha = 0,\ \beta = 1.0$ FC ≥ 35% $\alpha = 5.0,\ \beta = 1.2$ 5% < FC < 35% $\alpha = exp[1.76 - (190/FC^2)]$ $\beta = [0.99 + (FC^{1.5}/1000)]$	10 10 5
q_{c1ncs}	Clean sand equivalent q_{c1n}	$q_{c1ncs} = q_{c1n} \bullet K_{cpt}$	3
Qtn,cs (PKR 2010)	Clean sand equivalent for Q_{tn} described above - Q_{tn} being the normalized tip resistance based on a variable stress exponent as defined by Robertson (2009)	$Q_{tn,cs} = Q_{tn} \cdot K_c$ (PKR 2016)	16
Su(Liq)/ESv	Liquefied shear strength ratio as defined by Olson and Stark	$\frac{Su(Liq)}{\sigma_v'} = 0.03 + 0.0143(q_{c1})$ Note: σ_v' and s_v' are synonymous	13
Su(Liq)/ESv (PKR 2010)	Liquefied shear strength ratio as defined by Robertson (2010)	$\frac{Su(Liq)}{\sigma_v'}$ Based on a function involving $Q_{tn,cs}$	16
Su (Liq) (PKR 2010)	Liquefied shear strength derived from the liquefied shear strength ratio and effective overburden stress		16
Cont/Dilat Tip	Contractive / Dilative qc1 Boundary based on $(N_1)_{60}$	$(\sigma_v')_{boundary} = 9.58 \times 10^{-4}\ [(N_1)_{60}]^{4.79}$ *qc1* is calculated from specified qt(MPa)/N ratio	13
CRR	Cyclic Resistance Ratio (for Magnitude 7.5)	$q_{c1ncs} < 50$: $CRR_{7.5} = 0.833\ [q_{c1ncs}/1000] + 0.05$ $50 \leq q_{c1ncs} < 160$: $CRR_{7.5} = 93\ [q_{c1ncs}/1000]^3 + 0.08$	10
Kg	Small strain Stiffness Ratio Factor, Kg	[Gmax/qt]/[qc1n^{-m}] m = empirical exponent, typically 0.75	26

Calculated Parameter	Description	Equation	Ref
SP Distance	State Parameter Distance, Winckler static liquefaction method	Perpendicular distance on Qtn chart from plotted point to state parameter Ψ = -0.05 curve	25
URS NP Fr	Normalized friction ratio point on Ψ = -0.05 curve used in SP Distance calculation		25
URS NP Qtn	Normalized tip resistance (Qtn) point on Ψ = -0.05 curve used in SP Distance calculation		25

Project Name: Tanforan Mall Redevelopment
Corrosivity Analysis – ASTM Test Methods

Dear Mr. Gater:

Pursuant to your request, CERCO Analytical has analyzed the soil samples submitted on July 18, 2022. Based on the analytical results, a brief corrosivity evaluation is enclosed for your consideration.

Based upon the resistivity measurements, Samples No.002 and No.003 are classified as "corrosive", Sample No.001 is classified as "moderately corrosive" and Sample No.004 is classified as "mildly corrosive". All buried iron, steel, cast iron, ductile iron, galvanized steel and dielectric coated steel or iron should be properly protected against corrosion depending upon the critical nature of the structure. All buried metallic pressure piping such as ductile iron firewater pipelines should be protected against corrosion.

The chloride ion concentrations reflect none detected with a reporting limit of 15 mg/kg.

The sulfate ion concentrations ranged from none detected to 420 mg/kg and are determined to be sufficient to potentially be detrimental to reinforced concrete structures and cement mortar-coated steel at these locations. Therefore, concrete that comes into contact with this soil should use sulfate resistant cement such as Type II, with a maximum water-to-cement ratio of 0.55.

The pH of the soils ranged from 6.25 to 8.13, which does not present corrosion problems for buried iron, steel, mortar-coated steel and reinforced concrete structures.

The redox potentials ranged from 290-mV to 340-mV. All samples are indicative of potentially "slightly corrosive" soils resulting from anaerobic soil conditions.

This corrosivity evaluation is based on general corrosion engineering standards and is non-specific in nature. For specific long-term corrosion control design recommendations or consultation, please call JDH Corrosion Consultants, Inc. at (925) 927-6630.

We appreciate the opportunity of working with you on this project. If you have any questions, or if you require further information, please do not hesitate to contact us.

Very truly yours,
CERCO ANALYTICAL, INC.

J. Darby Howard, Jr., P.E.
President

1. EXECUTIVE SUMMARY

Ramboll Americas Engineering Solutions, Inc. (Ramboll) was retained by ARE-San Francisco No 94 Holding LLC, ARE-San Francisco No 95 Holding LLC, and ARE-San Francisco No 96 Holding LLC ("ARE" or the "client") to perform a Phase I Environmental Site Assessment (ESA) of the site located at 1122-1198 El Camino Real and 300 Tanforan Park in San Bruno, California (herein referred to as the "site," or the "facility", see Figures 1 and 2). Ramboll's assessment was conducted in connection with the redevelopment process.

The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International's Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E1527-21 (the "ASTM Standard"), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard (see Section 8).

The scope of work for the Phase I ESA was expanded to include a screening-level evaluation of the following additional considerations that are not included within the ASTM Standard:[1] asbestos-containing materials (ACMs), lead-based paint (LBP), water intrusion/mold, and radon.

1.1 Site Summary

The site is comprised of six parcels totaling approximately 43.8 acres developed with a regional shopping mall and an adjoining parcel. The mall structures comprise approximately one million square feet and include the central shops and a food court plus BJs Restaurant, Target, Cinemark Theaters, and Barnes & Noble in the center portion of the site; a JC Penney department store on the south portion of the site; and a Hyundai Dealership sales facility and automotive service center on the north portion of the site. In addition, there are parking structures on the southeast, east and north portions of the mall. The structures are surrounded by paved parking lots and accessways with small, interspersed landscaped areas. The adjoining site parcel is an approximately 1.4-acre paved, vacant and fenced lot located across the street north of the mall. Site access to the shopping mall is provided from several driveways off the surrounding streets including El Camino Real along the western perimeter, Sneath Lane along the northern perimeter, and Huntington Avenue along the eastern perimeter. Access to the adjoining site parcel is from El Camino Real along its western perimeter (see Figure 2).

The site was developed as a portion of the larger Tanforan Racetrack for horse racing in 1899 that operated intermittently until 1964. The racetrack was also used for auto racing and for United States military purposes including training (twice from 1914 to 1918 and from 1941 to 1950) and as an internment camp in 1942. Structures associated with the racetrack were destroyed in a 1964 fire, the site was zoned for its current use in 1966, and construction of the Tanforan Mall was completed from 1969 to 1972 including two Tire, Batteries, and Accessories (TBA) buildings with filling stations operated by JC Penney/Firestone and Sears. The mall was renovated from 2004 to 2006 and included demolition of the JC Penney/Firestone TBA building and expansion of retail and parking areas. The last expansion was the addition of a parking garage with cinemas in 2007-2008. The Sears TBA building remains, although the filling station ceased operation in the 1980s, and is currently occupied by Hyundai automotive services. The site has been under the current ownership (ARE-San Francisco No 94 Holding LLC, ARE-San Francisco No 95 Holding LLC, and ARE-San Francisco No 96 Holding LLC "ARE") since 2021-2022.

[1] The ASTM Standard refers to these matters as "non-scope considerations."

1.2 Phase I ESA Conclusions

Ramboll performed a Phase I ESA of the site in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 7.2 of this report. The assessment has revealed a REC in connection with the site (see Section 1.2.1). Several additional findings that are not considered RECs or Controlled RECs (CRECs) were identified by this assessment as summarized in Section 7.1.

1.2.1 Recognized Environmental Conditions

This assessment has identified the following REC in connection with the site:

- **On-Site Groundwater and Soil Contamination Related to Historical Operations at Site.** Sears formerly operated an Automotive Center (1178 El Camino Real) on the northeast portion of the site (currently operated by Hyundai Automotive) that included seven underground storage tanks (USTs) for the storage of gasoline (two 12,000-gallon and two 6,000-gallon), motor oil (two 530-gallon), and used oil (500-gallon). Following removal of the USTs between 1985 and 1987, investigations commenced to evaluate and delineate the extent of petroleum hydrocarbons in soil and groundwater beneath the site. Under the oversight of the San Mateo County Department of Environmental Health (SMCDEH), investigations continued into the 2000s and have included soil, groundwater, and soil vapor sampling, and the installation and periodic sampling of groundwater monitoring wells. In a letter dated March 15, 2013, SCMDEH stated that active remediation was not warranted for the former gasoline and oil USTs and the agency has not requested additional investigation of this area of the site since approximately that time.

  In 2001, a 100-gallon UST (unknown contents) was discovered in an excavation at a depth of approximately 16 feet below ground surface (bgs) during construction of the San Bruno Police Station adjoining the southeast side of the site (owned by BART [Bay Area Rapid Transit]) in 2001. This area is referred to as Anomaly E in correspondence and reports and appears to be a source area for subsurface petroleum and benzene impacts (see Figures 3 and 4). SMCDEH named BART as an additional responsible party in 2013, and BART has performed investigation and remediation of the area since that time. Based on a September 22, 2021 letter, the SMCDEH requested an additional post-remedial groundwater monitoring event (inclusive of all wells on the site and in the vicinity of Anomaly E), and indicated that if results demonstrated a sustained reduction in groundwater contaminants, further remedial effort may not be necessary, and the site may qualify for closure under the State Water Resource Control Board (SWRCB) Low-Threat Underground Storage Tank Case Closure Policy (LTCP). In response, a final groundwater sampling event was completed in December 2021 with groundwater results documented in a 2022 Report. Results of the event indicated that concentrations of benzene and ethylbenzene were detected above the San Francisco Bay Regional Water Quality Control Board (RWQCB) environmental screening levels (ESLs) for commercial/industrial land use and total petroleum hydrocarbons as gasoline (TPHg) exceeded the United States Environmental Protection Agency (USEPA) maximum contaminant level (MCL) for drinking water. In an April 2023 letter, the SMCDEH indicated that the site met LTCP conditions and concluded all appropriate response actions appear complete and further investigation, remedial/removal actions, or monitoring of the release does not appear warranted. However, the case closure summary stated the following: “An unknown amount of hydrocarbon-affected soil and groundwater remain in the subsurface at the site. The City of San Bruno Building Department has been notified that should excavation or development of the property be proposed that may encountered impacted soil or groundwater, SMCDEH must be notified.” In a July 2023 letter, the SMCDEH stated the RWQCB had approved SMCDEH’s recommended case closure and case closure will be granted when all of the wells are destroyed and all associated remediation

equipment, if any, are removed. A well destruction workplan was requested. As of the date of this report, a workplan or other documentation evidencing well destruction had not been provided to the SMCDEH. The current status for the site is listed as “Eligible for Case Closure” pending closure of groundwater monitoring wells.

The open case status and presence of groundwater contaminants above commercial/industrial ESLs represents a REC (this issue would be a CREC when case closure is issued). It is not expected that site redevelopment will be inhibited in a significant manner by residual subsurface impacts. Irrespective of case status with the oversight agency, residual impacts present at this site are likely to be managed as part of redevelopment and construction, continued coordination with the agency, and the implementation of a soil management plan.

1.3 Additional Considerations

Ramboll conducted a screening-level review of certain additional considerations that are not considered part of the ASTM Standard, as discussed in Section 5.3. Ramboll’s key findings from its review of additional considerations includes the following:

- **Asbestos-Containing Materials (ACMs).** The majority of the buildings were constructed prior and during 1972, except for the parking garage/Cinemark Theater building, which is prior to the time that asbestos was generally phased out of use in many building material applications during the mid-1980s. A limited screening survey was conducted at the site in 2021 that identified a total of 13 predominant suspect ACMs throughout the mall structures of which seven were sampled. None of the sampled materials were found to contain asbestos. Eight additional suspect ACMs were identified that were not sampled. The report concluded the following materials were assumed to contain asbestos: drywall and joint compound, roofing systems, and carpet/flooring adhesives generally throughout the structures; ceramic floor tile systems in the central shops and JC Penney; floor tile system in Target; and ceiling tile systems in Target and JC Penney. A 2022 Asbestos O&M Program was prepared to assist ARE with managing ACMs.
- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are lead-containing paint. Based on the construction date of the buildings in 1969 and 1972, it is likely that LBP was used on facility structures. Facility personnel were not aware of the presence of any LBP on structures at the facility, and Ramboll observed the paint to be in good condition.
- **Water Intrusion / Mold.** Ramboll did not perform a mold survey at the site. Facility personnel reported that there had not been any past water intrusion events with the exception of roof leaks at the Sears department store that were immediately repaired, same day. No other information was available.
- **Radon.** Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The USEPA’s continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, out of 45 sites surveyed in San Mateo County, three sites were over 4 pCi/L. A USEPA survey conducted in the same zip code as the site found that the average radon level of a first-floor room at two sites was 0.100 pCi/L.

2. INTRODUCTION

2.1 Scope of Work

Ramboll conducted a Phase I ESA of the site, relying on the sources of information noted below. The date on which the information was obtained/reviewed is also indicated in the table below.

Sources of Information Relied on for the Phase I ESA		
Resource	**Description**	**Date**
Site Reconnaissance		
Site visit	Ramboll representative: Jodi Vanneman (photographs from the site visit are provided in Appendix A)	January 17, 2025
Interviews		
Site Representatives (year first associated with the site)	Linda Larson, CBRE Inc., The Shops at Tanforan General Manager (2012)	January 17, 2025
Site Owner Representative	Same as above	Not applicable
Governmental Agencies	In lieu of interviewing regulatory authorities, Ramboll submitted written information requests and reviewed responsive information (if provided) in accordance with procedures established by the regulatory authorities (see below).	See below
Records Review		
Environmental Database Search	Environmental Data Resources, Inc (EDR) database report (Appendix B)	January 10, 2025
Governmental and Other Online Resources	USEPA EnviroFacts and Enforcement and Compliance History Online (ECHO) databases California Department of Toxic Substances Control (DTSC) EnviroStor and Hazardous Waste Tracking System (HWTS) databases California Water Resources Control Board (WRCB) GeoTracker website WRCB Storm Water Multiple Applications and Report Tracking System (SMARTS) California Environmental Protection Agency (CalEPA) Regulated Site Portal United States Department of Transportation, National Pipeline Mapping System (NPMS) online California Department of Conservation, Geologic Energy Management Division (CalGEM) Well Finder San Bruno City Building Department Online-Permits and eTrakit websites	January 2025

Sources of Information Relied on for the Phase I ESA		
Resource	**Description**	**Date**
Regulatory Agency Records	Ramboll reviewed site-related information available from the Bay Area Air Quality Management District (BAAQMD). Ramboll also requested information from the San Bruno City Fire Department and the SMCDEH; however, as of the date of this report, a response to Ramboll's requests had not yet been received. Additionally, building records for the site were viewed via EDR Lightbox.	January 13-21, 2025
Historical Sources	Aerial photographs, topographic maps, city directory listings, Sanborn maps (as available), obtained from EDR (Appendix C).	January 10-17, 2025
Physical Setting Sources	Current USGS 7.5-minute topographic map for the site and surrounding area. Geologic, hydrogeologic, and hydrologic information provided in the EDR report and prior site assessment reports noted below.	January 2025
Prior Environmental Reports and Site-Related Information	Prior environmental reports and other key documentation reviewed by Ramboll (Appendix D) include: • *Site Conceptual Model and Additional Screening Indoor Air Quality Monitoring Workplan, 1178 El Camino Real, San Bruno, California*, prepared by SCS Engineers, dated December 7, 2011 (the "2011 Site Conceptual Model and Air Quality Workplan"); • *2018 First Semi-Annual Groundwater Monitoring Report, Sears Automotive Service Center (No. 1478), 1178 El Camino Real, San Bruno, California*, prepared by AECOM, dated May 21, 2018 (the 2018 Groundwater Report"); • *Corrective Plan Implementation Report, Sears Automotive Service Center (No. 1478), Separate Source of Hydrocarbons in the Vicinity of the San Bruno Police Station, 1178 El Camino Real, San Bruno California*, prepared by AECOM, dated April 28, 2020 (the "2020 Corrective Plan Implementation Report"); • *Phase I Environmental Site Assessment, JC Penney Company Inc., 1122 El Camino Real*, San Bruno, California, prepared by Ramboll US Consulting, Inc., dated December 2020 (the "2020 Phase I ESA report"); • *Separate Source of Hydrocarbons in the Vicinity of the San Bruno Police Station, Sears Automotive Center #1478, 1178 El Camino Real, San Bruno, California*, prepared by SMCDEH, dated September 22, 2021 (the "2021 SMCDEH Letter"); • *Phase I Environmental Site Assessment*, 1122 El Camino Real, San Bruno, California, prepared by Ramboll US Consulting, Inc., dated July 2021 (the "July 2021 Phase I ESA report"); • *Phase I Environmental Site Assessment, 1150 and 1178 El Camino Real*, San Bruno, California, prepared by Ramboll US Consulting, Inc., dated October 2021 (the "October 2021 Phase I ESA report");	January 2025

Sources of Information Relied on for the Phase I ESA		
Resource	**Description**	**Date**
Prior Environmental Reports and Site-Related Information *(Continued)*	• *Limited Asbestos Screening-Level Survey, The Shops at Tanforan, 1150 El Camino Real, San Bruno, California*, prepared by Terracon Consultants, Inc., dated November 11, 2021 (the "2021 Asbestos Screening Report"); • *Asbestos Operations and Maintenance Program, 300 Tanforan Way and 1122, 1150, and 1178 El Camino Real, San Bruno, California*, by Ramboll US Consulting, Inc., dated July 2022 (the "2022 Asbestos O&M Program"); • *2022 Groundwater Monitoring Report, Sears Automotive Service Center (No. 1478), 1178 El Camino Real, San Bruno, California*, prepared by AECOM, dated February 11, 2022 (the "2021 Groundwater Report"); • *San Mateo County Groundwater Protection Program (GPP) Case Closure Memorandum and Case Closure Summary Sears Automotive Center #1478 and Separate Source in Vicinity of San Bruno Police Station, 1178 El Camino Real, San Bruno, California,* prepared by GPP Staff, dated April 18, 2023 (the "2023 Case Closure Memorandum and Case Closure Summary"), and • *San Mateo County Groundwater Protection Program Separate Source in Vicinity of San Bruno Police Station, Sears Automotive Center #1478, 1178 El Camino Real, San Bruno, California,* prepared by GPP Staff, dated July 3, 2023, (the "SMCDEH 2023 Letter"). In addition, Ramboll requested and reviewed the environmental documents identified in Section 10.8 of the ASTM Standard. Reviewed documents included a tenant list, site plan, and future development plans.	
Environmental Lien (EL)/Activity and Use Limitations (AUL)	EL/AUL search report obtained from EDR (Appendix E)	January 14, 2025
User-Provided Information		
User-provided Information	Information from the user of this assessment, consistent with the User Questionnaire in the ASTM Standard and other information identified in Section 10.8 and Section 10.9 of the ASTM Standard, was obtained during initial project scoping discussions.	N/A

Notes:

Ramboll interviewed representatives of the site (i.e., "facility personnel") identified by the client as having good knowledge of the uses, physical characteristics, and operations of the site (i.e., "key site manager" as defined by the ASTM Standard), including information identified in Section 10.8 and Section 10.9 of the ASTM Standard. Certain follow-up discussions and communication may have been completed following the date of the initial interview.

Database searches were completed for those databases required by the ASTM Standard, as well as other readily available sources. Where specified, the radius searched for each database was selected in accordance with the ASTM Standard.

This Phase I ESA was conducted in accordance with the methodology specified in the ASTM Standard, as agreed upon by Ramboll and its client in the proposal for this assignment.

The scope of work for this assignment was expanded to include an evaluation of certain additional considerations that are not included in the ASTM Standard, including a screening-level review of ACM[2] in site buildings, radon, water intrusion/mold, and LBP. The review of additional considerations was conducted based on available information and documentation; no samples of any media were collected as part of this assignment unless explicitly stated otherwise. Any other areas referred to as non-scope considerations by the ASTM Standard not listed above were outside the scope of this assessment.

2.2 Significant Assumptions

In conducting this review, Ramboll made no significant assumptions.

2.3 Reliance and General Limitations

This report has been prepared for the exclusive use of the ARE and its affiliated entities and may not be relied upon by any other person or entity without Ramboll's prior express written permission.

This report is considered current if the site visit, interviews, and regulatory database search were all performed within 180 days prior to the anticipated transaction. The conclusions presented in this report represent Ramboll's professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll must rely upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, the conclusions in this report are valid only to the extent that the information provided to Ramboll was accurate and complete. This review is not intended as legal advice, nor is it an exhaustive review of site conditions. Ramboll makes no representations or warranties, express or implied, about the conditions of the site.

Ramboll's scope of work for this assignment did not include collecting samples of any environmental media. As such, this review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll's review; however, this report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

Ramboll's limited review of ACMs in site structures did not include a formal asbestos survey or inspection. According to federal OSHA regulations (29 CFR § 1910.1001) and the Model Accreditation Plan (MAP; 40 CFR Part 763, Subpart E, Appendix C), the inspection, testing, evaluation, and/or sampling of suspect ACMs must be conducted by an accredited inspector; these activities were not performed as part of this environmental review. Comments in this report regarding the condition of building materials at the site, including known or suspect ACMs, represent only Ramboll's observations at the time of the site visit and are not intended to be consistent with definitions regarding ACMs condition in the Asbestos Hazard Emergency Response Act (AHERA) or in other federal or state asbestos regulations or industry standards.

On May 8, 2024, the USEPA formally published in the Federal Register (89 Fed. Reg. 39124) its final rule designating perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS), together with

[2] Ramboll's review of ACM in building materials did not include a formal asbestos survey in conformance with established protocols (as outlined in 40 CFR §763), applicable state or local regulations, or industry standards, and any comments in this report regarding the condition of building materials represent only Ramboll's observations at the time of the site visit and are not intended to be consistent with definitions regarding ACM condition in the Asbestos Hazard Emergency Response Act (AHERA) or in other federal or state asbestos regulations or industry standards.

their salts and structural isomers, as CERCLA hazardous substances. The rule was effective July 8, 2024. Therefore, Ramboll's assessment included consideration that PFOA, PFOS, and their salts and structural isomers are CERCLA hazardous substances. Ramboll's assessment also included review of other per- and polyfluoroalkyl substances (PFAS), to the extent identified, even if not a CERCLA hazardous substance (and thus outside the scope of the ASTM Standard). Ramboll's review is intended to provide guidance about possible current and/or historical uses of PFAS at the site based on the information available at the time of our assessment, recognizing that knowledge regarding the current and historical uses of these substances continues to evolve.[3]

[3] Ramboll's review of PFAS risks excludes certain PFAS-containing refrigerants that may be contained in on-site equipment and are gases at standard temperature and pressure (e.g., R-410A, R-134a), on the assumption that they are not expected to pose a significant site contamination risk.

3. SITE DESCRIPTION

3.1 Site Setting

The site is generally located northeast of the intersection of El Camino Real and the Interstate 380 freeway, and is approximately 10 miles south of San Francisco, California (Figure 1).

The site is comprised of six parcels totaling approximately 43.8 acres developed with a regional shopping mall and an adjoining parcel (see Figure 2). The mall structures comprise approximately one million square feet and include the central shops and a food court plus BJs Restaurant, Target, Cinemark Theaters, and Barnes & Noble in the center portion of the site; a JC Penney department store on the south portion of the site; and a Hyundai Dealership sales facility and automotive service center on the north portion of the site. In addition, there are parking structures on the southeast, east and north portions of the mall. The structures are surrounded by paved parking lots and accessways with small, interspersed landscaped areas. The adjoining site parcel is an approximately 1.4-acre paved, vacant and fenced lot located across the street north of the mall.

Site access to the shopping mall is provided from several driveways off the surrounding streets including El Camino Real along the western perimeter, Sneath Lane along the northern perimeter, and Huntington Avenue along the eastern perimeter. Access to the adjoining site parcel is from Sneath Lane along its southern perimeter. The table below provides an overview of physical setting information for the site.

Physical Setting Information	
Conditions	**Description**
Site Information	
Property Owner	ARE-San Francisco No 94 Holding LLC, ARE-San Francisco No 95 Holding LLC, and ARE-San Francisco No 96 Holding LLC
Size	Approximately 43.8 acres
Assessor Parcel Numbers (APNs)	APNs: 014-316-300, 014-316-310, 014-316-330, 014-316-360, 014-316-080, and 014-311-060
Topography, Geology, and Hydrology	
Topography	Site: Site elevation ranges from approximately 58 feet above mean sea level (AMSL) on the southwest perimeter of the site down to approximately 37 feet on the northeast perimeter of the site. The site exhibits an overall downslope to the northeast. Region: Regionally, the ground slopes downward to the northeast.
Nearest Surface Water Body to the Site	On-Site: There are no on-site surface water bodies. Off-Site: The San Bruno Canal is located approximately 0.5 mile northeast of the site. The canal flows east to discharge into the San Francisco Bay located approximately 1.2 miles east-northeast of the site.
Direction of Shallow Groundwater Flow	According to the 2022 Groundwater Monitoring Report and 2023 Case Closure Memorandum that includes numerous monitoring wells placed on and adjacent to the northeast portion of the site, the predominant direction of groundwater flow is to the northeast.

Physical Setting Information	
Conditions	**Description**
Depth to Groundwater	According to the 2022 Groundwater Monitoring Report and 2023 Case Closure Memorandum, groundwater was encountered at depth of approximately 3 to 21 feet bgs.
Geologic Conditions	According to the 2023 Case Closure Memorandum, the northeast portion of the site is underlain by fine and coarse-grained sediments. Gravelly and sandy fill is locally present just below the surface to approximately 3 to 5 feet bgs. The fill is underlain by clay/silt to a depth of approximately 12 to 15 feet bgs. The clay/silt unit is underlain by a laterally continuous silty sand to sand, with local gravel lenses, to a depth of least 50 feet bgs. The EDR report characterized the overall site soils as Urban land that are manmade or highly disturbed, compacted soil with a variable composition.
Flood Plain	Facility personnel reported no known occurrences of flooding at the site. The site is located in an area of minimal flood hazard, which are the areas outside the 500-year flood zone.
Wetlands	According to the wetlands information provided by the National Wetland Inventory (NWI) (as obtained from the EDR database report), there are no on-site federally designated wetlands.
Nearby Groundwater Supply Wells	According to well database information provided in the database search report, there is one federally-registered public water well located over one-half mile southeast (cross-gradient) and more than 400 state-registered wells within a one-mile radius of the site, the majority of which are observation and monitoring wells. Four of the state-registered wells are listed as public or water supply wells and are all located at least one-eighth mile southeast and southwest of the site.
Notes: Information in this table was obtained through visual observations during the site visit; a review of USGS topographic maps, Google Earth imagery, information contained in the database search report, prior environmental assessment reports, and local agency sources (noted in Section 2), and information provided by site representatives.	

3.2 Current Use of the Site

The site is currently operated as The Shops at Tanforan regional shopping center. The anchor tenants include JC Penney, Target, Planet Fitness, Barnes & Noble, Century Theaters, a Hyundai Dealership and automotive services (“Hyundai”), Petco, and BJ’s Restaurant & Brewery (“BJ’s”). There are approximately 30 smaller tenants that include several stores and salons, food service and smaller restaurant tenants, dance studios, a Bounce House, a military recruitment office, and a dental office (see Tenant List in Appendix D). Numerous units in the central building are vacant. Operations on the site do not involve manufacturing or fabrication activities.

Site representatives stated janitorial services and maintenance services are primarily conducted by third-party vendors and related supplies are not stored on the site. Further, tenant improvements are conducted by their third-party contractors/vendors and not by on-site management and several of the anchor tenants maintain their own building systems. Facility personnel knew of no current use of chlorinated solvents or per- and PFAS at the site, and the use of such chemicals would not be expected based on the nature of current site operations. Foam-based fire suppression systems are not present at the site. Other operations conducted at the site include the following:

- Operation of cooling towers, chillers, boilers, air compressors, packaged rooftop units and related systems for comfort air conditioning.
- Operation of fuel and hydraulic equipment including two box balers (JC Penney and Target buildings); approximately 15 hydraulic elevators and seven trash compactors throughout the site; one natural gas-fired emergency generator (Target); two diesel-powered emergency generators (JC Penney and Central Shops buildings); and one diesel-powered emergency fire pump with associated 175-gallon diesel aboveground storage tank (AST; mechanical building adjoining the north side of the cinema parking garage).
- Operation and maintenance of inground and aboveground grease interceptors associated with the food service kitchens in the central food court, cinema, BJ's, and in the Target building including the grocery department and their interior Starbucks coffee shop.
- Limited building and facility maintenance (not otherwise completed by third-party vendors) including the operation of power tools and small gasoline and diesel-powered equipment (e.g., floor washers, leaf blowers, sweepers), an electric Cushman cart, and an electric scissor lift.
- The Hyundai Dealership operates on the northeast portion of the site using a former department store building for automotive sales and administrative activities and using the existing automotive building (formerly occupied by Sears Automotive) for automotive services. The automotive building is equipped with 10 double-bay doors and several single bays. Hyundai operates an automotive repair and tire shop, which involves undercar repair and maintenance, including engine repair, fluid changes, tire replacements, parts replacement, battery replacement, and motor vehicle air conditioner (MVAC) servicing. Chemicals used in automotive servicing operations include motor oils, antifreeze, windshield washer fluid, automatic transmission fluid, non-chlorinated aerosol brake cleaners, and other automotive fluids. The Company operates approximately 15 interior hydraulic car lifts, all of which are aboveground that are inspected by a third-party annually and by staff daily for any signs of leakage or equipment failure. Several concrete patches were located throughout the building evidencing former underground hydraulic lift reservoirs associated with the previous building occupant, Sears Automotive. In addition, a parts washer unit using an enzyme-based solvent, is infrequently used to clean small automotive parts and equipment. At least two floor drains are located in the building including one identified near the center of the service bays, and one identified in a car wash bay. Hyundai representatives were unclear where these floor drains discharged; however, two metal grates in the exterior paved area south of the building suggest the drains may discharge into an oil/water separator (OWS). A basement is present in the building in which one floor drain, a sewage lift station sump, and a groundwater sump, were identified. An operating air compressor is located in the basement; otherwise, the basement is used solely for storage. Condensate from the air compressor discharges to the concrete floor but only minor staining beneath the air compressor is present.

At the time of the site visit, Ramboll did not note strong odors in interior or exterior areas at the site associated with site operations. No evidence of hazardous substance releases related to air emissions from site operations other than combustion products from the periodic operation of natural gas and diesel emergency generators was observed. Limited and relatively minor staining on the concrete floor was observed in areas underlying/adjacent to the air compressors in the mechanical air handling equipment room of the JC Penney building and basement of the Hyundai automotive services building that were limited to the immediate area inside the buildings. Various small areas of pooled oil and limited staining were also identified in the Hyundai automotive services building that are confined to the building. As these releases appeared to be confined to paved areas inside the buildings, this staining is not considered to represent a significant concern to the site.

4. RECORDS REVIEW

4.1 Historical Site Use and Local Agency Information

The site was developed as a portion of the larger Tanforan Racetrack for horse racing in 1899 that operated intermittently to 1964. The racetrack was also used for auto racing and for United States military purposes including training (twice from 1914 to 1918 and from 1941 to 1950) and as an internment camp in 1942. Structures associated with the racetrack were destroyed in a 1964 fire, the site was zoned for its current use in 1966, and construction of the Tanforan Mall was completed from 1969 to 1972 including two TBA buildings with filling stations operated by JC Penney/Firestone and Sears. The mall was renovated from 2004 to 2006 and included demolition of the JC Penney/Firestone TBA building and expansion of retail and parking areas. The last expansion was the addition of a parking garage with cinemas in 2007-2008. The Sears TBA building remains, although the filling station ceased operation in the 1980s, and is currently occupied by Hyundai automotive services. The site has been under the current ownership (ARE-San Francisco No 94 Holding LLC, ARE-San Francisco No 95 Holding LLC, and ARE-San Francisco No 96 Holding LLC) since 2021-2022.

The table below provides a summary of key information obtained by Ramboll from a review of available historical resources and information obtained from local governmental agencies and regulatory bodies.

Summary of Historical Resources and Local Agency Information for the Site

Historical Resource	Key Observations Regarding Site History
Historical Resources	
Sanborn Maps (1925, 1949 and 1953)	1925: The site is occupied primarily by the Tanforan Race Course, labeled as provided water from the South San Francisco City System. Along the east-northeast portion of the site are stalls, a small office structure and a tavern. Horse stalls are present along the southeastern portion of the site. A club house and grandstand are on the western portion of the site. The rest of the site is occupied by the dirt horse racetrack and its inner field. 1949 and 1953: The horse track remains and several small lakes are shown within the inner field along with grandstands, jockey's quarters, administration building and paddocks on the western portion; portion of a warehouse extending onto the southeast portion; and a tavern and stables on the north-northeast portion. In addition, the water line serving the site is labeled as the Navy Water System.
Aerial Photographs (1943, 1946, 1956, 1963, 1968, 1974, 1982, 1993, 1998, 2006, 2009, 2012, 2016 and 2020) Satellite Imagery (1993 to 2024)	1943: The horse track remains with several barrack-style structures present on the inner field and along the northwest boundary of the site. Grandstand and horse stall structures are present on the west-southwest and southeast portions of the site, respectively. 1946: The outline of the horse track is apparent and horse stalls and grandstand structures are present on the northeast and west-southwest portions of the site, respectively. The barrack-style buildings are no longer present, and it appeared the racetrack was being restored. 1956 and 1963: The horse track is present with lakes on the inner field, and grandstands, a warehouse and horse stalls on the west-southwest, southeast and northeast portions of the site, respectively.

Summary of Historical Resources and Local Agency Information for the Site	
Historical Resource	**Key Observations Regarding Site History**
Aerial Photographs (1943, 1946, 1956, 1963, 1968, 1974, 1982, 1993, 1998, 2006, 2009, 2012, 2016 and 2020) Satellite Imagery (1993 to 2024) *(Continued)*	1968: The racetrack features and structures are no longer present and the site is vacant. The current streets along the northwest and southeast (Sneath Lane and Huntington Avenue) are present separating the northern parcel from the rest of the site. 1974: The original central mall structure at the center, the current store and automotive services buildings (formerly Sears and Sears Automotive) on the northern portion, and the current JC Penney and associated automotive services buildings on the southern portion of the site are present and surrounded by parking except for a building expansion that appeared underway on the west side of the central shops structure. The northern parcel is developed as a portion of a larger, paved parking lot. 1982-1993: The western expansion of the central shop structure is complete and a stand-alone commercial building has been added to the western portion of the site. 1998: Similar except two small structures (or large storage containers) are present on the northern parcel. 2004: The central portion of the mall appears to be undergoing renovation with the western addition to the central building, the stand-alone building on the western portion, and the former JC Penney automotive services building on the southeast portion removed and construction equipment present. The northern parcel is a paved and vacant lot. 2005: Similar to 2004 except stockpiled soil is stored on the northern parcel and tire tracks suggest the soil is associated with development of the parking structure on the northeast portion of the mall that was underway. 2006: The western entrance to the mall has been reconfigured and building additions are apparent on the west and northeast sides of the central mall structure. In addition, development of the parking structure is complete. The northern parcel is an undeveloped, vacant lot. 2007: A parking structure had been added to the southern portion of the site. 2009-2024: The site is present in its current configuration and the northern parcel is a paved, vacant lot.
Topographic Maps (1896 to 2022)	1896 and 1899: No development is depicted on the site. 1915: No development is depicted except for a railroad track extending across the northern site parcel. 1939: A racetrack with a few buildings along the southwest, southeast and northeast portions is present. The railroad tracks are no longer located on the site. 1947 and 1956: The racetrack and structures are still present along with small ponds on the inner field and the site is labeled the Tanforan Racetrack. 1968: No development is depicted on the site. 1973 and 1980: A large structure occupies the center of the site with smaller buildings on the northeast and southeast portions. 1995 and 1996: The site is shaded to indicate dense urban development without showing specific structures. Inner roads, similar to the current mall accessways, are also shown. 2012-2022: There is no shading and only the inner roads are shown in the 2012 map, no roads are shown in the later maps. It is noted these later map versions typically only depict topographic features and roadways.

Summary of Historical Resources and Local Agency Information for the Site	
Historical Resource	**Key Observations Regarding Site History**
City Directory Abstracts (1953, 1970, and 1976 to 2020 at approximate five-year intervals)	One occupant was listed prior to the mall development and includes Coral Reef Restaurant at 1180 El Camino Real in 1953. Past/present occupants of the Tanforan Shopping Center/The Shops at Tanforan include the following: • 201-401 Tanforan Shopping Center/Tanforan Park Shopping: Various shops, restaurants, dental center, banks, photo shops, travel agency, Emporium, J C Penney, and cinemas (1976-2017), One Hour Photo (1986), Tanforan Dry Cleaner (at #302A, only 1986), and Tanforan Shopping Center (2020). • 96-412 Tanforan Mall/Park: Various shops, restaurants, dental center, banks, photo shops and Tanforan Park Cinemas (1992-2017), Emporium (1992), and Tanforan Cleaners/Tanforan Cleaners & Shoe Repair (at 402 Tanforan, 1992 and 1995). • 1110 El Camino Real: Firestone (1986-1995). • 1122 El Camino Real: J C Penney (1986-2017), J F Ardly OD (1995), and San Bruno Police Association (2005). • 1140 El Camino Real: Bank (1981-1995), The Shops at Tanforan (2005), and various stores and restaurants (2010-2017). • 1150 El Camino Real: Vacant (1981), stores and restaurants (1986-2005), dental offices (1995, 2005), Tanforan Park Shopping Center (1995), Shops at Tanforan and various shops, dental office(s), and Target and restaurants (2010-2017). • 1178 El Camino Real: Various offices (1976-2005), Sears (1976-2017), USA Petroleum (1981), Sears Auto Center (2010), and Budget (2017).
San Bruno City Online Library	According to a 2024 Chronicle article, the Tanforan Mall area was part of the Mexican land grant Rancho Buri Buri. Governor Jose Castro gave the land to Jose Antonio Sanchez in 1837. His land was divided among his children, one of whom was Toribio Tanforan, whose land became the Tanforan Racetrack from 1899 to 1970. When horse racing became illegal in 1908, the track hosted alternative events, including auto racing. During World War I, the racetrack was used as an Army training camp for a volunteer regiment of the 144th Field Artillery of the U.S. Army. Horse racing was legalized again in 1923 and horse racing returned. For seven months in 1942, the Tanforan Racetrack was used as a temporary detention center for Japanese Americans during World War II and then the racetrack use continued until 1964, when the grandstands caught fire and the racetrack was demolished. In 1970, the Hapsmith Corporation developed the Tanforan Shopping Center.
Prior Phase I Reports	Both the 2020 and 2021 Phase I ESA reports stated portions of the site were developed with the Tanforan Racetrack in 1899 and was used as U.S. military training center from 1914 to 1918 and from 1941 to 1950, and as an internment camp in 1942. The track burned down in 1964 and the mall was developed in 1972. The JC Penney automotive shop was demolished in 2005.
Site Representative(s)	Site representatives stated the mall was previously the Tanforan Racetrack and was developed with the original mall in 1970 and renovated in the mid-2000s. Site representatives were not aware of any prior dry cleaner businesses having operated on the site.

Summary of Historical Resources and Local Agency Information for the Site	
Historical Resource	**Key Observations Regarding Site History**
Database Search Report	The EDR Historical Cleaner city directory database listed Tanforan Cleaners & Shoe at 302 Tanforan Park A in a 1991 directory, and at 402 Tanforan Park in 1992 through 1998 directories as a drycleaning plant (except rugs; 302 and 402 Tanforan Park are historical addresses associated with the site).
Local Agency Information	
San Mateo County Assessor	The site APNs identified by the San Mateo County Assessor and readily available data, where provided, include the following: • 014-316-300: approximately 15.3 acres, Use Type -shopping centers; addressed as 1122 El Camino Real • 014-316-310: approximately 2.2 acres, Use Type – Shopping Centers, Improvements - 81,284 square feet of building space built in 2008; addressed as 1188 El Camino Real • 014-316-330: approximately 11.45 acres, Use Type – Shopping Center, Improvements – only year built of 1971 provided; addressed as 1178 El Camino Real • 014-316-360: approximately 11.98 acres, Use Type – Shopping Center; addressed as 1150 El Camino Real • 014-316-080: approximately 1.5 acres, Use Type – Shopping Center, Improvements – 194,172 square feet of building space built in 1972; addressed as 300 Tanforan Shopping Center • 014-311-060: approximately 1.4 acres, Use Type – parking lot; no situs address.
EL and AUL Search Report	The site APN ownership provided in the EL and AUL Search Report includes the following: • In September 2021, ARE-San Francisco No 94 Holding LLC acquired APN 014-316-300 from CTL PropCo I LLC • In November 2021, ARE-San Francisco No. 95 Holding LLC acquired APNs 014-316-310 and 014-316-330 from Seritage SRC Finance LLC • In January 2022, ARE-San Francisco No. 96 Holding LLC acquired APNs 014-311-060, 014-316-080 and 014-316-310, and only the improvements (not the land) of APN 014-316-310 from Shops at Tanforan Associates LLC There are no liens or AULs associated with the site dating back to the dates these vestings were recorded in 2021 and 2022.
Online-Permits and eTrakit websites	Records were reviewed for 300 Tanforan, and 1110, 1122, 1150, 1178, and 1188 El Camino Real. In addition, other addresses formerly or currently associated with the site including 302 and 402 Tanforan Park, and 1140 and 1198 El Camino Real were reviewed. • 300 Tanforan/Tanforan Park/Tanforan Shopping Center: Records are dated 1996 to 1998 and include permits for general improvements for Target. • 302 Tanforan Park: Records dated 1995 included improvements for The Designers Center.

Summary of Historical Resources and Local Agency Information for the Site	
Historical Resource	**Key Observations Regarding Site History**
Online-Permits and eTrakit websites *(Continued)*	• 402 Tanforan Park: Records dated 1991 were identified to remodel Unit 402 for Tanforan Cleaners including a floor plan that did not depict the presence of an on-site dry cleaning unit; rather, sewing machines, shoe repair, clothing racks and a fitting room were shown. • 1110 El Camino Real: A 1990 permit was identified to remove an exterior 550-gallon waste oil UST located along the east side of the Firestone auto services building adjacent to a dumpster enclosure. No records were provided to evidence its removal. • 1122 El Camino Real: Records were dated from 1970 to 2022 including construction of J C Penney store and TBA building in 1970. Site plans dated 1984 and 2003 of the shopping center depicted a Firestone TBA building and a Sears TBA building on the southeast and northeast portions of the site, respectively. Other records dated up to 2022 refer primarily to general improvements associated with the JC Penney Store and construction of a parking garage in 2005. In addition, permits were issued various years to the San Bruno Police Association and others for a seasonal fireworks stand. • 1140 El Camino Real: Permits are dated 1975 to 2016 that refer to development of a bank building in 1975 and demolishing the bank building in 2003 and permits issued 2010 to 2021 for various improvements at stores and restaurants including Target, CVS and BJs Brewery. • 1150 El Camino Real: Permits were issued from 1950 to 1960 for a barn, horse stables, offices, restrooms, pro-shop, and an addition to a grandstand for the Tanforan Racetrack owned by Tanforan Co LTD. Permits were issued for shopping center buildings from 1970 to 2022. The shopping center was developed under the ownership of Hapsmith Company. Permits were notably issued from 2003 to 2006 for a major mall renovation including a permit for “underground tank removal” issued in 2005 (no specific tank information or location provided). • 1178 El Camino Real: The original permit for the Sears store and TBA building was issued in 1969. Other records dated up to 2023 refer primarily to improvements for the Sears store and TBA/auto services building and for Hyundai of San Bruno dated 2022. In addition, a permit was issued in 2022 for installation of an aboveground storage tank (owner/operator not listed but was likely for Hyundai). • 1188 El Camino Real: Permits are dated 2004 to 2023 and refer to cinemas, a parking structure and stores. • 1198 El Camino Real: Permits are dated 2005 to 2024 for various building improvements including a 2005 plan check to add Avis to the Sears Tire Center, a 2011 Hazardous Materials Fire Operations Permit (related business not provided), 2006 and 2015 sign permits for Avis/Budget, and a 2024 business compliance permit for Tanforan Smog Check.
EDR Building Permit Report	The EDR Building Permit Report listed dozens of permits that appeared to be generally similar to the more-recent permit history previously referenced above. Additional permits identified include a 2005 aboveground fuel AST for 1150 El Camino Real, and a 2001 AST permit for 1178 El Camino Real.
San Bruno City Zoning Records	Based on a review of the Rome/Floyd County Planning Department, GIS Maps Online website, the Spears property is zoned “L-I” (Light Industrial), as is the area to the south.

Summary of Historical Resources and Local Agency Information for the Site	
Historical Resource	**Key Observations Regarding Site History**
BAAQMD	In response to an information request, the BAAQMD provided the following site records: • 1110 El Camino Real: permit for Firestone to operate a gasoline station with convenience store, the facility status stated "demolished 1/23/1985." The permit history listed JC Penney in 1983. • 1122 El Camino Real: permit for JC Penney to operate an emergency backup generator beginning in 2004 with an expiration date of December 1, 2025. • 1150 El Camino Real: Three permits are on record for this address as follows: 1) permit for Target to operate an emergency generator beginning in 2004 with an expiration date of May 1, 2025; 2) permit for The Shops at Tanforan to operate an emergency generator beginning in 2005 listed as a "merged facility" as of 2012 with no permit expiration data provided; and 3) permit issued to Burger King in 2010 (equipment type not provided). • 1178 El Camino Real: permit for Sears to operate an emergency generator in 2005 that expired in 2020. • 1188 El Camino Real: voided permit for The Shops at Tanforan to operate a new diesel fire pump issued in 2006 and expired in 2018.
CalEPA Regulated Site Portal	The following entries were identified for the site on the CalEPA Regulated Site Portal: • 1110 El Camino Real: permit for Firestone to operate a gasoline station with convenience store, the facility status stated "demolished 1/23/1985." The permit history listed JC Penney in 1983. • 1122 El Camino Real: JC Penney is listed as an air emissions, chemical storage and hazardous waste generator facility. JC Penney submitted a chemical and waste inventory on February 26, 2024 that listed diesel fuel stored up to 59 gallons, and four waste types (corrosives, flammable, aerosols and lab pack). • 1150 El Camino Real: Petco is listed as a hazardous waste generator facility. No chemical or waste inventory was listed. • 1150 El Camino Real: Panda Express is listed as a chemical storage facility for the storage of up to 2,599 cubic feet of carbon dioxide as reported on February 19, 2024. • 1150 El Camino Real: Chipotle Mexican Grill is listed as a chemical storage facility for the storage of up to 59 gallons of carbon dioxide as reported on January 30, 2024. • 1150 El Camino Real: Target is listed as an air emissions, chemical storage and hazardous waste generator facility. Target submitted a chemical and waste inventory on June 28, 2024 that listed hydraulic oil, floor finish, carbon dioxide, electrolyte and propane stored up to 119 gallons each, R-404a (a refrigerant) stored up to 2,500 cubic feet, and six retail waste types (corrosives bases, corrosive acids, flammable/toxic, aerosols, oxidizer and California designated waste) in addition to the storage of number Consumer Products that may meet hazardous designations (for retail sales). • 1178 El Camino Real: Hyundai of San Bruno is listed as a chemical storage and
CalEPA Regulated Site Portal *(Continued)*	• hazardous waste generator facility. Hyundai submitted a chemical and waste inventory on January 1, 2024 that listed various automotive wastes (i.e., oil, oily absorbent, fuel, ethylene glycol) and product oil stored up to 1,199 gallons or 499 pounds each.

Summary of Historical Resources and Local Agency Information for the Site	
Historical Resource	**Key Observations Regarding Site History**
	• 1178 El Camino Real: Sears is listed as a Leaking UST Cleanup Site (see further discussion in Sections 4.2 and 4.4). • 1188 El Camino Real: The Shops at Tanforan is listed as an air emissions facility. • 1188 El Camino Real: Century Theaters Tanforan is listed as a chemical storage facility for the storage of up to 15,598 cubic feet of carbon dioxide as reported on May 9, 2023. Hazardous waste management is further discussed in Section 5.1.3.
Notes: In addition to aerial photographs provided by the third-party provider, Ramboll viewed historical satellite imagery available on Google Earth. Printed copies were not obtained, and imagery dates were not independently verified.	

4.2 Environmental Regulatory Database Review for the Site

Ramboll reviewed the results of the state and federal environmental database searches performed by the third-party database search provider (Appendix B) and reviewed information available on the EnviroStor, SMARTS, HWTS, GeoTracker, NPMS and CalGEM websites. The site is listed on several environmental databases related to site conditions, as discussed in the table below.

Summary of Environmental Database Listings for the Site	
Summary of Information Contained in Database	**Ramboll's Comments**
Camp Tanforan, a military facility that formerly included the site, is on the Federally Used Defense Sites (FUDS) and EnviroStor databases. The EnviroStor database identifies this listing as a military evaluation property under FUDS with a status of "No Department of Defense Action Indicated (NDAI)" status as of September 13, 2012.	A January 2011 letter from the Department of the Army (Army) stated that the former approximately 118-acre Tanforan Racetrack property was utilized by the Army as an assembly center for people of Japanese ancestry in 1942 and Department of the Navy for troop housing from 1943 to 1946. Improvements included barracks, mess halls, recreation buildings, and other support buildings. During the U.S. Navy use, a boiler house, rifle range building, incinerator, and paint mixing and storage building(s) were constructed. The military-constructed buildings were removed and the site was reverted back to a racetrack after 1946 and subsequently as a shopping mall in 1970. In a 1991 Inventory Project Report, it was reported that the site was initially used by the Navy before it was transferred to the Army; information regarding actual Navy use was not identified and no records were found during research supporting that the Navy acquired the site prior to the Army. Records indicated the War Department acquired the land directly from the Tanforan Company, Ltd. for use as a Japanese assembly center in 1942. Historical accounts indicated that the land was briefly used by the Navy around 1911 as an airfield and later as a military training center during World War I. However, between World War I

Summary of Environmental Database Listings for the Site	
Summary of Information Contained in Database	**Ramboll's Comments**
	and World War II, the site reverted back to use as a racetrack. No evidence of any Department of Defense uses remained at the site in 2011, and the site had been redeveloped into a shopping center. This listing does not represent a significant environmental concern to the site; prior racetrack and military uses are further discussed in Section 7.
Sears (Sears Automotive and related business names), a former occupant at 1178 El Camino Real, is listed in on the Historical Underground Storage Tank (Hist UST), Leaking Underground Storage Tank (LUST), Hazardous Waste and Substances List (Cortese)/Historical Cortese, UST Finder Release, Recovered Government Archive LUST (RGA LUST), GeoTracker, and California Environmental Reporting System (CERS) databases related to the prior operation of USTs and an unauthorized release that impacted soil and groundwater. The HIST UST database listed the following five USTs: two 5,000-gallon gasoline, two 12,000-gallon gasoline, and one 500-gallon waste oil installed in 1970. A leak was reported in 1985, and the current LUST status is "Open – Eligible for Closure" as of April 18, 2023. Sears is also listed on the Resource Conservation and Recovery Act Small Quantity Generator (RCRA-SQG), RCRA-Large Quantity Generator (RCRA-LQG), Facility and Manifest Data (Haznet)and HWTS databases for generation of hazardous waste circa 1987 to 2020. Wastes included waste oil and mixed oil, oil/water separation sludge, other organic solids, unspecified organic liquid mixture, latex, alkaline solution, unspecified solvent mixture, off-spec/ aged/surplus organics, and polychlorinated biphenyls (PCBs), among others. These wastes were generated from automotive services and retail activities as of off-spec/damaged/returned merchandise (e.g., cosmetics, cleaners, paint) that exhibits hazardous waste characteristics is required to be managed as hazardous waste.	Sears formerly operated seven USTs that were removed between 1985 and 1987 followed by investigations to evaluate and delineate the extent of petroleum hydrocarbons in soil and groundwater beneath the site. Under the oversight of the SMCDEH, investigations continued into the 2000s and have included soil, groundwater, and soil vapor sampling, and the installation and periodic sampling of groundwater monitoring wells. In a letter dated March 15, 2013, SCMDEH stated that active remediation was not warranted for the former gasoline and oil USTs. In 2001, a 100-gallon UST (of untype type and contents) was discovered in an excavation at a depth of 16 feet bgs during construction of the San Bruno Police Station adjoining the southeast side of the site (owned by BART) in 2001. This area is referred to as Anomaly E in correspondence and reports and appears to be a source area for subsurface petroleum and benzene impacts. SMCDEH named BART as an additional responsible party in 2013, and BART has performed investigation and remediation of the area since that time. Based on a September 22, 2021 letter, the SMCDEH requested an additional post-remedial groundwater monitoring event (inclusive of all wells on the site and in the vicinity of Anomaly E), and indicated that if results demonstrated a sustained reduction in groundwater contaminants, further remedial effort may not be necessary, and the site may qualify for closure under the SWRCB Low-Threat Underground Storage Tank Case Closure Policy. In response, this sampling was completed with groundwater results indicating case closure could be pursued. The current status states the site is "Eligible for Case Closure" pending closure of groundwater monitoring wells. This matter is further discussed in Sections 4.4 and 7.

Summary of Environmental Database Listings for the Site	
Summary of Information Contained in Database	**Ramboll's Comments**
JC Penney at 1122 El Camino Real is listed in the HWTS and Facility and Manifest Data (Haznet) databases as a generator of asbestos-containing waste, PCBs, aged or surplus organics, unspecified solvent mixtures, other inorganic solid waste, and laboratory waste chemicals, among others. The asbestos, PCB and other wastes were likely generated as a result of facility renovations. In addition, wastes are generated from retail activities as of off-spec/damaged/returned merchandise (e.g., cosmetics, cleaners, paint) that exhibits hazardous waste characteristics is required to be managed as hazardous waste.	The listings do not suggest a contamination concern to the site. Wastes generated at the site are further discussed in Section 5.1.3.
Firestone is listed at 1122 El Camino Real on the HIST UST database. The facility type is listed as a gas station and four USTs installed in 1972 included three 10,000-gallon gasoline USTs and one 500-gallon waste oil tank. JC Penney at 1122 El Camino Real is also listed in the HIST UST database. The facility type is listed as auto repair, and one 500-gallon waste UST was installed in 1972. This appears to be a duplicate listing to the Firestone waste oil tank reported above.	As previously referenced in Section 4.1, a 1990 permit was issued to remove an exterior 550-gallon waste oil UST located along the east side of the Firestone auto services building. It is not clear if this is the same waste oil UST listed on the HIST UST database or an additional tank. No records were provided to evidence removal of the 550-gallon UST or other tanks. Facility personnel indicate there are no active USTs on-site but were unaware of the closure process prior or during the demolition of the automotive operations building in 2005. It is unclear whether the tanks were removed from the ground or if leaks were discovered upon closure of the tanks. This matter is further discussed in Section 7.
Firestone listed at 1110 El Camino Real is listed in the HIST UST, Statewide Environmental Evaluation and Planning System UST (SWEEPS UST), California Facility Inventory Database UST (CA FID UST), and San Mateo Co. Business Inventory (San Mateo Co. BI) databases. The SWEEPS database lists one waste oil UST (size not provided); HIST UST database lists one 550-gallon waste oil UST, and FID UST database lists only listed the site as an active UST facility. These three UST databases are historical and have not been updated since the 1990s. The facility is listed as an inactive UST site on the San Mateo BI database.	A former building was located on the southeast portion of the site that is separate from the current JC Penney Store building. Both buildings were historically operated by JC Penney, addressed 1110 and 1122 El Camino Real, and known to have been used for the automotive building. Therefore, the UST listings for 1110 and 1122 El Camino Real appear to be duplicate listings.
JC Penney and Firestone Tires are listed at 1178 El Camino Real on the RGA LUST, HWTS and Haznet databases. The RGA LUST date is 1992. No other data is provided on this database. The waste activity is dated from 1984 to 1986 and the waste type only included a one-time removal of tank bottom waste.	The address of 1178 El Camino Real appears to be an error as JC Penney/Firestone operated an automotive services building on the southeast portion of the site addressed as 1110 and 1122 El Camino Real, as discussed above.

Summary of Environmental Database Listings for the Site	
Summary of Information Contained in Database	**Ramboll's Comments**
Tanforan Cleaners & Shoe at 302 and 402 Tanforan Park are listed in the EDR Historical Cleaners (EDR Hist Cleaner) database, which is an EDR proprietary database listing businesses from directories that provided dry cleaning services. This business was listed at 302 Tanforan Park in 1991, and at 402 Tanforan Park from 1992 to 1998.	This EDR proprietary database is derived from business names as opposed to records or permits indicating dry cleaning was actually performed at the location. According to Ramboll's previous 2021 Phase I ESA, site representatives stated one of these unit location corresponded to the current dental office in the central shops buildings. It is possible the cleaner only operated at 402 Tanforan Park with 302 being an error. As referenced in Section 4.1, building permit records dated 1991 were identified to remodel Unit 402 for Tanforan Cleaners. These records included a floor plan that did not depict the presence of an on-site dry cleaning unit; rather, sewing machines, shoe repair, clothing racks and a fitting room were shown. This information suggests a dry cleaning unit was not likely operated at the site and only drop-off/pick-up services were provided. As such, this matter is not further discussed.
The Picture People, LensCrafters, Kiddie Kandids, Express Stop Photo, Expressly Portraits, and PDQ One Hour Photo, former tenants at 1150 El Camino Real or 210-D Tanforan Park, and Tanforan Dental Group, a current tenant at 1150 El Camino Real, are listed on the RCRA-SQG and/or Haznet databases for the generation of RCRA-regulated and/or non-RCRA wastes related to photo or x-ray developing activities that primarily generated silver waste.	The generation of hazardous wastes, by itself, does not suggest a known release or contamination at the site. Wastes generated at the site are further discussed in Section 5.
CVS Pharmacy, a former tenant, is listed at 1150 El Camino Real on the RCRA-SQG database for the generation of RCRA-regulated wastes. The waste types include various metals, ignitable, corrosive, pesticides and chlorinated materials among others, and were likely components of off-spec/damaged/returned merchandise (e.g., cleaners, cosmetics, pesticides) that exhibited hazardous waste characteristics and was therefore managed as hazardous waste.	
Target Store, a current tenant, is listed at 1150 El Camino Real on the RCRA-LQG and RCRA-SQG database for the generation of RCRA-regulated wastes. The waste types include various metals, ignitable, corrosive, pesticides and chlorinated materials among others, and were likely components of off-spec/damaged/returned merchandise (e.g., cleaners, cosmetics, pesticides) that exhibited hazardous waste characteristics and was therefore managed as hazardous waste.	

Summary of Environmental Database Listings for the Site	
Summary of Information Contained in Database	**Ramboll's Comments**
Hyundai of San Bruno is listed at 1178 El Camino Real on the E Manifest for generation of hazardous waste.	
Twenty past/present site tenants including Tanforan Park Shopping Center at 1140, 1150 and 1178 El Camino Real and 300 Tanforan Park not already discussed above are listed on the HWTS and Haznet databases related to hazardous waste activity. These waste activities are associated with the management of off-spec/damaged/returned merchandise that exhibit hazardous waste characteristics and are therefore managed as hazardous waste.	
Notes: There are also several listings for past and present commercial tenants for the site also listed on the following databases related to regulatory compliance: CERS, CERS Hazardous Waste (CERS Haz Waste), Emissions Inventory (EMI), ECHO, E Manifest, Facility Index System/Facility Registration System (FINDS), Resource Conservation and Recovery Act Non-Generator/No Longer Regulated (RCRA NonGen/NLR), and San Mateo County Business Inventory (San Mateo Co. BI) databases. Listings on these databases, by themselves, are not necessarily indicative of contamination.	

4.3 Prior Operations and Chemical Use

According to facility personnel, operations have remained generally consistent except that JC Penney/Firestone previously operated a filling station and automotive services facility on the southeast portion of the site. In addition, Hyundai began conducting automotive services around 2023 out of the same building in which Sears previously conducted automotive services on the northeast portion of the site.

Facility personnel knew of no past use of chlorinated solvents or PFAS at the site, nor did Ramboll's review of database listings and site documents identify the past use of chlorinated solvents or PFAS at the site. Databases referenced in Section 4.2 indicate off-spec/damaged merchandise that contained chlorinated compounds and was managed as a regulated waste at some of the stores; however, there is no evidence of the use of such chemicals. The site is not listed on any PFAS-related databases searched by EDR (or other provider). Site personnel were not aware of any past fires at the site, or use of firefighting foams for fire training drills.

4.4 Previous Environmental Assessments and Activities

Based on a review of historical site documents and interviews with site representatives, prior environmental assessment, sampling, or remediation activities have been conducted at the site, as summarized below. Pertinent historical and site-related information contained in the prior reports has been incorporated into other sections of this report.

Former Sears Automotive TBA Services Center at 1178 El Camino Real

- **2011 Site Conceptual Model and Air Quality Workplan.** This report was prepared by SCS Engineers for Sears and reported that seven USTs operated by Sears were formerly located at the site including two 12,000-gallon gasoline USTs, two 6,000-gallon gasoline USTs, two 530-gallon bulk motor oil USTs, and one 500-gallon used oil UST. The four gasoline and two motor oil USTs were reportedly removed in 1985, and the 500-gallon used oil UST was reportedly removed in January 1987. All the USTs except the 500-gallon UST were located south of the TBA building. In addition, geophysical surveys performed at the site identified five subsurface anomalies (designated Anomalies A through E) not in proximity to the former USTs but on-site. Elevated concentrations of petroleum hydrocarbons were detected near Anomalies D and E.

  In February 2001, a BART subcontractor discovered a 100-gallon UST at a depth of approximately 16 feet bgs in a construction zone that is now believed to be in the basement area of the adjacent San Bruno Police Station to the southeast of the site (and therefore, not located on the site), near the southwest corner of the BART construction zone during excavation for the police station. The UST was removed by a BART subcontractor in 2010. Field notes completed by BART's environmental consultant indicate that a sheen was present in groundwater in the vicinity of the UST. The tank appeared to be located downgradient of MW-11 and cross-gradient of MW-4, in the vicinity of Anomaly E.

  The report provides on-site areas where several previous subsurface investigations had identified benzene and TPHg in soil. Benzene elevated above ESLs (0.33 mg/kg and 1.4 mg/kg for residential and commercial land uses) appears to be limited to west and southeast portions of the movie theater. TPHg elevated above ESLs (430 mg/kg and 2,000 mg/kg for residential and commercial land uses) appears to be limited to the southeast and west (with a further west to the police station) portions of the movie theater.

- **2013 SMCDEH Letter.** In response to a Feasibility Study and Corrective Action Plan submitted by SCS Engineers on behalf of Sears, the SMCDEH concurred with the proposed approach of a Dual Phase Extraction remedial program to address impacts in the vicinity of Anomaly E, stating that it was the only area where free product was observed, and warranted active remediation. The letter stated that no active remediation was necessary for other areas of the site. The pilot test for the selected remedial approach at Anomaly E was implemented in 2015.

- **2018 Groundwater Report.** In March 2018, AECOM conducted a semi-annual groundwater monitoring event on behalf of Sears. Depth to groundwater ranged from approximately 6 to 16 feet below the top of casing (i.e., top of the well near the ground surface). Groundwater sample results indicated elevated concentrations of TPHg and benzene, toluene, ethylbenzene and xylene (BTEX) that appeared to be localized around the southern portion of the police station (Anomaly E) with one elevated TPHg concentration 50 feet south of the Sears TBA building.

- **2020 Corrective Plan Implementation Report.** AECOM prepared a Corrective Plan Implementation Report on behalf of Sears that stated BART had implemented a DPE remedial program from August 22, 2019 through September 24, 2019 to remediate the source area at Anomaly E. Post-remedial groundwater sample results indicated that benzene concentrations in groundwater monitoring wells were reduced by one to two orders of magnitude but remained above commercial/industrial screening criteria, and the trend of cumulative contaminant mass removal had not reached asymptotic conditions, signifying that the system may have been shut down prematurely.

- **2021 SMCDEH Letter.** In response to the SMCDEH's review of the above 2020 report, the SMCDEH requested BART complete a post-DPE groundwater monitoring event to evaluate current plume conditions. A comprehensive groundwater monitoring event had not been completed since 2018. If future monitoring indicated a sustained reduction in groundwater concentrations, additional secondary source reduction may not be required.
- **2022 Groundwater Report.** AECOM prepared the 2022 report on behalf of Sears. Field activities for the post-DPE groundwater monitoring event included gauging and sampling of nine monitoring wells located south of the Sears TBA building and along the eastern property line in December 2021. The highest dissolved-phase concentrations of TPHg and benzene in groundwater are located in the area near Anomaly E and the Police Station in the general location of the former UST that appeared to be associated with the former racetrack (Figure 3). The benzene plume (greater than 10 µg/L and less than 100 µg/L) appeared to be limited to an area roughly 100 feet in length (Figure 4). Ramboll notes that although the map depicts benzene up to 100 µg/L, the maximum concentration of benzene detected during the event was 54 µg/L. TPHg concentrations were noted as being lower than previous detected values. AECOM concluded that the remedial objectives for low-threat closure, including the reduction of benzene concentrations in the source area to less than 100 µg/L, well below the target low-threat closure criteria of 3,000 µg/L, had been achieved for the Sears Automotive Center and recommended case closure.
- **SMCDEH 2023 Case Closure Memorandum and Case Closure Summary.** SMCDEH stated the site appears to satisfy the SWRCB Low-Threat UST Case Closure Policy, reporting the following notable conditions: the release only consists of petroleum hydrocarbons; the release had been stopped through removal of the USTs; free product has not been observed; the conceptual site model was sufficient to define the contamination and demonstrate LTCP criteria had been met; and the secondary source had been removed to the extent practicable (i.e., excavation of Anomaly E area, application of oxygenating agent, and completion of a DPE event). Further, potential vapor intrusion issues at the San Bruno Police Station were evaluated through multiple rounds of soil gas and indoor sampling and during the most recent indoor air sampling event (2014), benzene was found to slightly exceed the commercial ESL (0.42 micrograms per cubic meter [µg/m^3]) with a maximum of 0.63 µg/m^3 detected but was considered unlikely to represent an unacceptable human health risk due to benzene levels lowered during the 2019 DPE event and further reduction as a result of natural attenuation. SMCDEH concluded all appropriate response actions appear complete and further investigation, remedial/removal actions, or monitoring of the release does not appear warranted. However, the case closure summary stated the following: "An unknown amount of hydrocarbon-affected soil and groundwater remain in the subsurface at the site. The City of San Bruno Building Department has been notified that should excavation or development of the property be proposed that may encountered impacted soil or groundwater, SMCDEH must be notified."
- **SMCDEH 2023 Letter.** The letter stated the RWQCB had approved SMCDEH's recommended case closure and no comments were received during the public comment period. Therefore, case closure will be granted when all of the wells are destroyed and all associated remediation equipment, if any, are removed. A well destruction workplan was requested.

To date, the requested workplan or other documentation to demonstrate well destruction has not been provided and therefore, the case status remains open and eligible for case closure. Ramboll spoke with the SMCDEH case manager, Mr. Brian Gwinn, who confirmed this documentation has not been received and the case status remains open.

Ramboll compared the last groundwater sampling results for petroleum constituents to ESLs for groundwater vapor intrusion human health risk levels for commercial/industrial land use or to the MCL in drinking water where no RWQCB ESLs exist. The following exceedances were found: TPHg exceeded the MCL of 760 µg/L in two wells (MW-22 and MW-13) at concentrations of 1,800 and 2,000 micrograms per liter (µg/L); benzene exceeded the ESL of 1.8 µg/L in four wells (MW-13, MW-19R, MW-22 and MW-23) at concentrations ranging from 3.1 to 54 µg/L; and ethylbenzene exceeded the ESL of 15 µg/L in three wells (MW-13, MW-19, and MW-22) from 72 to 310 µg/L. Isoconcentration contours for benzene and TPH-g in groundwater during the latest sampling event in 2021 are provided on Figures 3 and 4.

Previous Phase I ESA reports

- **2020 Phase I ESA Report**. In 2020, Ramboll conducted a Phase I ESA of the southern portion of the site in the area occupied by JC Penney Store and associated parking areas on behalf of CTL PropCo I LLC and found no RECs in connection with this portion of the site. Notable other findings were identified, including the following: (1) former USTs at the site without closure documentation or soil and groundwater confirmation sample results; (2) past site operations that may have included the use of petroleum products, solvents, and other chemicals; and (3) potential migration of contamination to the JC Penney parcel from Sears and a former dry cleaner at the Tanforan shops on the northern and central portions of the Tanforan Mall, respectively; and (4) given the date of construction, there was a potential for ACMs to be present in building materials.
- **July 2021 Phase I ESA Report.** In 2021, Ramboll conducted a Phase I ESA of the southern portion of the site in the area occupied by JC Penney Store and associated parking areas on behalf of ARE and found no RECs in connection with this portion of the site. One *de minimis* condition was identified that included multiple areas of exterior pavement and interior flooring where oil stains were apparent on pavement that did not appear to reach floor or stormwater drains. Other findings were identified, including the following: (1) former USTs at the site without closure documentation or soil and groundwater confirmation sample results; (2) past site operations that may have included the use of petroleum products, solvents, and other chemicals; and (3) given the date of construction, there was a potential for ACMs and LBP to be present in building materials.
- **October 2021 Phase I ESA Report.** In 2021, Ramboll conducted a Phase I ESA of the northern portion of the site in the area occupied by the former Sears store, Sears TBA automotive building, and associated parking areas on behalf of ARE. The 2021 report identified one REC that included the presence of on-site soil and groundwater contamination above regulatory screening criteria related to the historical operations at the site. Specifically, the contamination is related to operation of seven gasoline and motor oil USTs by Sears that were removed in 1985 and 1987, and a UST that was identified in the basement of the eastern adjoining Police Station building in 2001. The previous investigations, remedial action, and agency correspondence completed through 2021 as referenced above, was reviewed, and the 2021 report stated that following additional post-remedial groundwater monitoring, the site may be eligible for case closure. Notable other findings were identified, including the following: (1) past site operations that may have included the use of petroleum products, solvents, and other chemicals; and (2) potential presence of ACMs and LBP based on the date when the buildings were constructed.
- **2021 Asbestos Screening Report.** Terracon conducted a limited asbestos screening survey at The Shops at Tanforan. A total of 13 predominant suspect ACMs were identified throughout the mall structures of which seven were sampled. None of the sampled materials were found to contain asbestos. Eight additional suspect ACMs were identified that were not sampled. The report

concluded the following materials were assumed to contain asbestos: drywall and joint compound, roofing systems, and carpet/flooring adhesives generally throughout the structures; ceramic floor tile systems in the central shops and JC Penney; floor tile system in Target; and ceiling tile systems in Target and JC Penney.

- **2022 Asbestos O&M Program**. The O&M Program was developed to assist ARE with managing ACMs throughout the mall structures. The assumed ACMs were listed as those identified in the 2021 Asbestos Screening Report.

4.5 User-Provided Information

Because this assessment is being prepared on behalf of the owner of this site, user-provided information (e.g., relating to environmental liens, activity use limitations [AULs], specialized knowledge of the site, property value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination) was obtained through the site reconnaissance and interviews and is referenced in the applicable sections of this report.

5. SITE OBSERVATIONS

5.1 Chemical and Petroleum Storage

5.1.1 Underground Storage Tanks

According to site representatives, there are no current USTs at the site. Ramboll identified pipes in the Hyundai automotive building labeled as fresh and motor oil that are no longer use. This piping was associated with former storage tanks that have been removed.

Several USTs associated with the former JC Penney/Firestone and Sears TBA buildings were formerly operated at the site, as identified in the table below. Only a permit was identified for removal of one of the USTs from the JC Penney/Firestone building in 1990, as previously referenced in Section 4.1. The Sears USTs were removed in 1985 and 1987. A discussion of investigation and remediation activities associated with the Sears USTs is presented in Section 4.4. Sears site is listed on the Leaking Underground Storage Tank (LUST) database.

Underground Storage Tanks

Number and Size (gal.)	Location	Contents	Key Dates	Regulatory Closure Granted	Notes
Removed/Disposition Unknown					
2 x 12,000	Associated with former Sears Automotive services, northeast portion of the site	Gasoline	Removed 1985	No – The associated Leaking UST case has an "Open - Eligible for Closure" as of April 18, 2023	Reports regarding the removal, investigation and remediation related to the former USTs is discussed in Section 4.4. The site is currently on the LUST List related to an authorized release from the former USTs with a current case status of Eligible for Closure as of April 18, 2023. This matter is further discussed in Section 7.
2 x 6,000		Gasoline			
2 x 530		Bulk Oil			
1 x 500		Waste Oil	Removed 1987		
3 x 10,000	Associated with former JC Penney/ Firestone automotive services on the southeast portion of the site	Gasoline	Installed 1972 No record confirming removal	No	Facility personnel indicate there are no active USTs on-site but were unaware of the closure process prior or during the demolition of the automotive operations building in 2005. It is unclear whether the tanks were removed from the ground and if leaks were discovered upon closure of the tanks. Records referenced both a 500 and a 550-gallon waste oil UST that are presumed to be the same tank. A 1990 permit was issued to remove an exterior 550-gallon waste (see Section 4.1) but no records confirmed its removal. This matter is further discussed in Section 7.
1 x 500 (or 550)		Waste oil			

5.1.2 Aboveground Storage Tanks

One 175-gallon, steel elevated diesel tank is located over a concrete floor inside the fire pump room in an ancillary building located along the north side of the parking garage/cinema building. There is no secondary containment provided for this tank. The diesel fuels the fire pump via aboveground piping within the same room. A diesel odor and staining were noted on the concrete around the pump. Facility personnel were aware of the leak and had contacted the fire sprinkler maintenance contractor to repair the leak. The staining was contained to the building. No secondary containment is provided for this tank. This matter is further discussed in Section 7.

5.1.3 Other Chemical and Petroleum Containers

Several dedicated drum and other storage areas for chemicals and petroleum products are maintained at the site:

- Several one and five-gallon containers of paints on shelves and on the concrete floor, and several containers of gasoline and diesel in containers up to three gallons stored within a flammable materials storage cabinets are stored within the mall management shop.
- One parts washing container using a biodegradable solvents and approximately twenty 55-gallon drums of product oil and transmission fluid, automotive-related wastes (used oil filters, used oil, used transmission fluid, and used clay absorbent) and universal wastes (aerosols) and one 350-gallon tote of product oil are located in the Hyundai automotive service bays. The majority of the drums are stored on top of secondary containment pallets.
- Used food grease was observed stored in one 275-gallon tote within the trash compactor enclosure adjoining the parking garage/Century Theater structure, and in an approximately 100-gallon tallow bin within the trash enclosure adjoining BJ's restaurant.
- Approximately twenty five-gallon containers and associated approximately 150-gallon detergent tank are located in the carwash stall of the Hyundai automotive services building.
- A small countertop dental x-ray development machine is operated in the Tanforan Dental Care unit. Silver waste is removed from this unit by a cartridge that is mailed for off-site recovery.
- Several one-gallon containers of oil and lubricants are stored in the fire pump room.
- The restaurant and food service tenants store one or more cylinders of compressed carbon dioxide cylinders associated with the carbonated beverage systems.
- Water treatment chemicals associated with the air handling equipment are stored in a few drums and smaller containers in the mechanical rooms at the JC Penney and Hyundai mechanical spaces.
- Diesel-fueled generators are located in the JC Penney building and outside on the east side of the building with associated fuel reservoirs up to approximately 100 gallons each.
- Numerous 55-gallon drums stored on the concrete floor and approximately 15-gallon lidded, plastic storage bins stored on shelves are used by various stores to manage returned/damaged/off-spec/aged products that exhibit hazardous waste characteristics (e.g., cosmetics, shampoo, perfume, cleaners) and universal wastes (e.g., light bulbs/tubes and batteries) that are removed under manifest procedures for off-site processing. This storage was observed in the warehouse spaces of JC Penney, Target, and Petco.
- A few 55-gallon drums and smaller containers of hydraulic oil are stored by Otis Elevator in a few elevator equipment rooms.

Minor staining and small pools of freshly spilled oil were observed in some areas of the Hyundai automotive services building. Hyundai representatives stated the spilled oil is cleaned up on a daily basis and the used clay absorbent is placed in a drum. Hyundai representatives also stated the floors are not washed down but are swept clean. Otherwise, site representatives knew of no significant spills or releases of materials at drum and container storage areas. While dedicated secondary containment was not provided for all of the drums and containers, Ramboll did not observe other evidence of spills or uncontrolled releases from these storage areas, other than minor staining in some elevator equipment rooms. As the observed stains were observed to be minor in nature and are contained to the concrete floored building areas, this staining does not represent a significant environmental concern.

5.2 Other Site Reconnaissance Observations

During the site visit, Ramboll made observations of interior and exterior portions of the site to look for and identify the features, activities, uses, and conditions specified in Section 9.4 of the ASTM Standard, as discussed in the table below.

Site Reconnaissance Observations

Conditions	Description
Site Utilities and Equipment	
Heating and Cooling Equipment	Natural gas and electric fueled cooling towers, chillers, boilers, air compressors, packaged rooftop units and related systems are operated for comfort heating and air conditioning.
Natural Gas Service	The site is provided with natural gas service.
Use of Fuel Oil for Building Heat	No current or former use of fuel oil for building heat.
Foam-based Fire Suppression System	According to facility personnel, the site is not equipped with a built in foam-based fire suppression system, and there is no indication of a former use of a foam-based firefighting system at the site.
Water Supply and On-site Water Wells	The site receives drinking water from the City of San Bruno water system. No on-site domestic water wells were identified. Although not observed in the areas accessed, groundwater monitoring wells associated with the groundwater investigations completed at the former Sears Automotive facility, as previously discussed in Section 4.4, may remain as documentation confirming their proper abandonment have not been identified.
PCB-containing Equipment	Site representatives were not aware of any on-site equipment that is known to contain PCBs. There are at least five exterior, pad-mounted, oil-filled transformers on the site; the units are owned by Pacific Gas & Electric Company (PG&E). The units are not labeled as to their PCB content. Because the unit may have been installed before the 1979 federal ban on the manufacture of PCBs, it is possible that transformer oils contain PCBs. Site representatives were not aware of spills or leaks from these transformers. Because the building(s) were constructed prior to the 1979 federal ban on the manufacture of PCBs, it is possible that hydraulic or other types of electrical equipment, such as capacitors, contain PCBs.

Site Reconnaissance Observations		
Conditions	**Description**	
PCB-containing Equipment *Continued)*	There are approximately 15 hydraulic elevators throughout the site. Because most of the building areas were constructed prior to the 1979 federal ban on the manufacture of PCBs, it is possible that the hydraulic fluid in the elevator reservoirs contain may PCBs. Facility personnel indicated that the elevators are serviced annually and as needed by OTIS within the main mall structures, and by third-party vendors retained by the larger tenants (e.g., Target and JC Penney). As such, it is likely that hydraulic fluid used in the building elevators in the early 1970s (and potentially containing PCBs) has been replaced and removed from the site. Minor staining confined to the immediate concrete floor area at the equipment reservoir was observed in a few elevator rooms that does not represent a concern based on the confined, small spill and apparent newer oil release (light-colored oil and/or staining). There are approximately 15 newer aboveground hydraulic lifts in the Hyundai automotive service bays that are unlikely to contain PCBs based on the equipment age. Releases were not observed form the hydraulic lifts and facility personnel stated the lifts are routinely inspected and serviced. Several concrete patches were observed in the concrete floor evidencing the presence of prior underground hydraulic reservoirs associated with removed automotive lifts. No information regarding the removal of the prior automotive lifts has been made available to Ramboll. In addition, seven newer hydraulic trash compactors and two box balers were identified at the site that are unlikely to contain PCBs based on the equipment age. Ramboll did not identify staining associated with this hydraulic equipment.	
Waste, Wastewater and Stormwater		
Waste	Hazardous and Universal	Numerous 55-gallon drums stored on the concrete floor and approximately 15-gallon lidded, plastic storage bins stored on shelves are used by various stores to manage returned/damaged/off-spec/aged products that exhibit hazardous waste characteristics (e.g., cosmetics, shampoo, perfume, cleaners) and universal wastes (e.g., light bulbs/tubes and batteries) that are removed by third-party vendors under manifest procedures for off-site processing. This storage was observed in the warehouse spaces of JC Penney, Target, and Petco and no major releases or staining was observed. Approximately six 55-gallon drums of automotive-related wastes (used oil filters, used oil, used transmission fluid, and used clay absorbent) and universal wastes (aerosols) and one 350-gallon tote of product oil are located in the Hyundai automotive service bays. The majority of the drums are stored on top of secondary containment pallets. Minor staining and small pools of freshly spilled oil were observed in the drum storage area. Hyundai representatives stated the spilled oil is cleaned up on a daily basis and the used clay absorbent is placed in a drum. Based on the minor releases and staining observed within the immediate drum area and daily cleanup routine, this staining is unlikely to represent a significant concern.

Site Reconnaissance Observations		
Conditions	**Description**	
Waste *(Continued)*	Nonhazardous	Nonhazardous waste generated at the site includes general debris stored in seven trash compactors and several dumpsters located outside the buildings. The trash is removed by various third-party vendors for off-site processing. Used food grease and associated sludge are periodically removed for off-site processing by third-party vendors from a 275-gallon storage tote within the trash compactor enclosure adjoining the parking garage/Cinemark Theater structure, from the two belowground interceptors, and from several small aboveground, in-line grease interceptors associated with the restaurants and food service facilities.
	Observations	Other than as referenced above, Ramboll observed no evidence of a contamination concern associated with waste storage and management at the site.
Wastewater	Sanitary	Sanitary wastewater from the site is discharged to the municipal sanitary sewer system.
	Process	Wash water generated in the carwash bay at the Hyundai automotive services building is discharged into a floor drain located within the same carwash bay. Standing water of at least a few inches with soap suds was observed present at the time of Ramboll's site visit. According to Hyundai representatives, this wash water is discharged directly to the sanitary sewer system. However, two metal plates were present in the pavement on the south side of the building that may be associated with an oil/water separator. Hyundai began occupying the site in 2023 and stated there has been no clogging or concerns associated with the floor drain system and they have never pumped or serviced the drainage system and did not known the purpose of the two metal covers in the paved area. Regardless, the dilute nature of the car wash water is unlikely to represent a significant environmental concern to the site. The prior automotive activities, including potential operation of an oil/water separator, is further discussed in Section 7. Other operations at the site do not generate process wastewater except for unfiltered air compressor condensate that was observed from three air compressor located in the JC Penney and Hyundai mechanical rooms and in the Hyundai automotive services building basement. Minimal staining was observed on the concrete immediately beneath the air compressors and based on the limited staining that has not extended a foot or more beyond the units, this minimal staining is unlikely to represent a significant concern.
	Septic Systems	No identified current or former septic systems.
	Observations	Ramboll observed no evidence of a contamination concern associated with the current wastewater management at the site.

Site Reconnaissance Observations		
Conditions	**Description**	
Stormwater	Management	Percolates into the ground surface at unpaved areas enters catch basins that discharge to the municipal storm sewer system. One sump pump was observed at the Hyundai building's loading dock to discharge accumulated water to the municipal storm sewer system. Although not observed, it is possible another sump pump is associated with the downward sloping loading dock at the JC Penney building.
	Observations	Ramboll observed no evidence of a contamination concern associated with stormwater management at the site.
Other Interior and Exterior Observations		
Exterior Ponds, Pits, Lagoons and Standing Surface Water	Ramboll observed no exterior ponds, pits, or lagoons.	
On-site Disposal or Fill Material	Ramboll did not observe any areas of the site indicative of on-site waste disposal or placement of fill material.	
Staining and Stressed Vegetation	No stained or stressed vegetation was observed.	
Interior Drains, Sumps, Pits, and Trenches	In addition to the floor drains and presumed oil/water separator observed in the Hyundai automotive service building, and the floor drains and grease interceptors associated with restaurants and food tenants previously discussed above, floor drains were observed in the mechanical rooms housing the air handling equipment in the JC Penney and Hyundai buildings that discharge directly to the sanitary sewer system. These systems receive discharge from the air compressors, boilers, cooling towers and chillers. In addition, sewer lift stations were observed in the basements of the Hyundai retail building and the Hyundai automotive services buildings that discharge to the municipal sewer system. Floor drains are also located in the restrooms, the laundry room of the Central Shops building, and in food service areas that discharge directly to the sanitary sewer system.	
Odors	At the time of the site visit, Ramboll did not note strong odors in interior or exterior areas at the site.	

5.3 Additional Considerations

Ramboll's scope of work also included a review of certain additional considerations that are not included within the scope of the ASTM Standard (i.e., "ASTM non-scope considerations"). A summary of Ramboll's findings for these additional considerations is provided in the table below.

Review of Additional Considerations		
Consideration	**Summary of Review**	**Comments/Findings**
ACM	As previously discussed in Section 4.4, a limited screening survey was conducted at the site in 2021 that identified a total of 13 predominant suspect ACMs throughout the mall structures of which seven were sampled. None of the sampled materials were found to contain asbestos. Eight additional suspect ACMs were identified that were not sampled. The report concluded the following materials were assumed to contain asbestos: drywall and joint compound, roofing systems, and carpet/flooring adhesives generally throughout the structures; ceramic floor tile systems in the central shops and JC Penney; floor tile system in Target; and ceiling tile systems in Target and JC Penney. A 2022 Asbestos O&M Program was prepared, as previously referenced in Section 4.4, to assist ARE with safely managing ACMs.	Based on the age of the majority of the buildings, ACMs may be present. The suspect and presumed ACMs identified were observed to be in good condition and there is an Asbestos O&M Program in place. There are no regulatory requirements to remove ACM or evaluate whether building materials contain asbestos unless the materials are damaged and have the potential to release fibers or the materials have the potential to be disturbed during renovation or demolition activities.
Radon	According to site representatives, no radon surveys have been completed at the site. Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The USEPA□s continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, out of 45 sites surveyed in San Mateo County, three sites were over 4 pCi/L. A USEPA survey conducted in the same zip code as the site found that the average radon level of a first-floor room at two sites was 0.100 pCi/L.	No issues identified.
Water Intrusion/Mold	A comprehensive survey for water intrusion/mold was not in Ramboll's scope of work. Site representatives were not aware of water intrusion or apparent mold growth at the site.	No issues identified.
Lead-Based Paint (LBP)	Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the majority of the site buildings, it is possible that LBP was used historically on the buildings.	Ramboll observed the painted buildings surfaces to generally be in good condition. Based on the age of the site buildings, it is possible that the buildings contain LBP.

Review of Additional Considerations		
Consideration	**Summary of Review**	**Comments/Findings**
Lead-Based Paint *(Continued)*	Ramboll made limited, non-exhaustive observations of painted surfaces at the site. Site representatives indicated that no LBP surveys have been performed at the site. Painted surfaces at the site, both interior and exterior, were generally observed to be in good condition.	
Notes: Ramboll did not conduct a comprehensive survey for any of the issues noted above. Furthermore, Ramboll's observations were inherently limited and included only non-exhaustive visual observations.		

6. SURROUNDING PROPERTIES

The ASTM Phase I Standard requires an evaluation of the potential for migration of contamination onto the site from adjoining and other off-site properties. Ramboll's review of potential contamination risks posed by properties surrounding the site is presented below.

6.1 Current and Past Uses of Adjoining Properties and Surrounding Area

The site is located in a mixed commercial, light industrial and residential land use area, as summarized in the table below. The nearest residences are located approximately 150 feet east of the site.

Current and Past Uses of Adjoining Properties

Uses of Adjoining Properties	Notable Past Uses and Approximate Time Period	Observations Relating to Potential Conditions
North		
Sneath Lane followed by stores and stores, restaurant and a bank to the north-northwest; and by a US Post Office to the direct north.	Portions of the Tanforan Racetrack (1899 to 1964) Sneath Lane followed by undeveloped land (1965s to 1980s) Sneath Lane and commercial development (1980s to present)	Ramboll did not observe conditions on, or identify past uses of, adjacent properties that represent a potential contamination concern to the site.
East		
BART parking garage and light rail station, San Bruno Police Station and Huntington Avenue followed by a residential area along the eastern mall boundary; and a municipal building with storage yard at the east-northeastern boundary.	Portions of the Tanforan Racetrack with a shop/corporate yard structure noted to include gas and oil storage and railroad track followed by undeveloped and residential land (1899 to 1964) Undeveloped land, railroad track and Huntington Avenue followed by residential land and a small storage yard (1965s to 2000s) BART parking garage, light rail station, police station and Huntington Avenue followed by a residential land and a small municipal building (2000s to present)	During construction of the BART Station and Police Station, a UST was discovered that, based on review of fire insurance maps, may have been associated with the Tanforan Racetrack shop. Information regarding investigation and remediation of associated contamination was previously discussed in Section 4.4. Ramboll did not observe conditions on, or identify past uses of, adjacent properties that represent a potential contamination concern to the site.
South		
Interstate 380 followed by residential area.	Portions of the Tanforan Racetrack (1899 to 1964) Undeveloped (1965s to 1970s) Interstate 380 followed by residential area (1975s to present)	Ramboll did not observe conditions on, or identify past uses of, adjacent properties that represent a potential contamination concern to the site.

Current and Past Uses of Adjoining Properties		
Uses of Adjoining Properties	**Notable Past Uses and Approximate Time Period**	**Observations Relating to Potential Conditions**
West		
El Camino Real followed by a gas station (1199 El Camino Real); a veterinarian facility; a bank; a dental office; other general commercial uses; and the National Cemetery.	El Camino Real, undeveloped and residential (<1925 to 1940) El Camino Real, National Cemetery, undeveloped, a gas station, a pet hospital, a hotel, and portion of Camp Tanforan (1940s to 1970s) El Camino Real, National Cemetery, a gas station, a pet hospital, and general commercial (1970s to present)	The gas station is on the Leaking LUST databases and is further discussed in Section 6.2.1. Otherwise, Ramboll did not observe conditions on, or identify past uses of, adjacent properties that represent a potential contamination concern to the site.
Notes: During the site visit, Ramboll walked or drove by the borders of the properties that are adjacent to the site. Ramboll did not enter the neighboring properties.		

6.2 Database Review for Off-Site Properties

6.2.1 Adjoining Properties

Based on a review of the environmental database search report, Ramboll identified the adjoining property listed in the table below on databases relating to known or potential past releases.

Database Listings Relating to Known / Potential Releases at Adjoining Properties[1]		
Listing Name and Relative Location	**Summary of Information Contained in Database**	**Ramboll's Comments**
Shell Station 1199 El Camino Real (adjoining to the west beyond El Camino Real)	This currently operating gas station is identified in the Leaking UST (LUST), Cortese and UST Release Finder databases for a release discovered in 1995 during the closure of a gasoline UST. The matter has open status. The LUST database states a release of gasoline and fuel contaminants to other groundwater was reported in 2002 and the case was issued closure on May 11, 2017.	Based on a 2015 Groundwater Monitoring Report and Case Closure Memorandum, a release was reported in 2002, various phases of investigation were completed, and a groundwater extraction system was operated that reduced groundwater impacts. A methyl tertiary butyl ether (MBTE) plume moved east towards a deep drinking water production well. Sampling and analysis of the production well indicated that the plume stabilized at a distance allowing for closure under the Low-Threat Closure Policy. Seven groundwater monitoring wells were located in the parking lot on the western portion of the mall site. The direction of groundwater flow was reported as variable but shown to be toward the southeast on the northwestern portion of the site. MTBE was sampled in three of these on-site wells in 2015. MTBE was detected in on-site well MW-16 at 240 µg/L below the residential and commercial ESLs set at 450 µg/L and 2,000 µg/L. Wells were previously sampled for TPHg and BTEX 2013 and results were either non-detect or where detected

Database Listings Relating to Known / Potential Releases at Adjoining Properties[1]		
Listing Name and Relative Location	**Summary of Information Contained in Database**	**Ramboll's Comments**
Shell Station 1199 El Camino Real (adjoining to the west beyond El Camino Real) *(Continued)*		were below applicable screening criteria. The property was granted regulatory case closure in May 2017. Since constituents of concern are below applicable screening levels, remedial action was conducted and case closure was granted, this adjoining Shell Station is unlikely to represent an environmental concern to the site.
Notes: Ramboll's analysis of adjoining properties was based on observations made during the site reconnaissance and location information for off-site listings as presented in the database report. Also, for purposes of this analysis, Ramboll considers as "adjoining" properties that are adjacent, even if separated by a road or other physical barrier. Ramboll has not included a discussion of compliance-related databases in this table (e.g., RCRA Generator, UST, AST), as Ramboll considers it unlikely that off-site properties listed on compliance-related databases without indication of a release or chemical mishandling represent a potential risk for contamination to the site.		

6.2.2 Other Surrounding Properties

There are several listings in the environmental database report for non-adjoining off-site facilities within applicable ASTM search radii; however, Ramboll has not identified any properties that are likely to represent a potential contamination concern to the site.[4]

The database report indicates that poor or inadequate address information was available for several properties located in the vicinity of the site; therefore, these properties could not be readily mapped by the third-party provider. Because the location of these properties with respect to the site could not be evaluated, Ramboll is limited in its ability to express an opinion regarding the potential for impact to the site from these properties. It was beyond the scope of this review to accurately locate each of the unmapped properties identified in the database report; however, Ramboll reviewed the list of unmapped properties and verified that none appeared to be adjacent to the site.

[4] Ramboll considers various factors in its determination whether a non-adjoining site represents a likely risk of contaminant migration to the subject site, including (if known) the type of database on which the off-site property is listed, whether and when the listing received regulatory closure, presumed or known groundwater flow direction, available reports and documentation, and distance from the site.

7. FINDINGS, OPINION, AND CONCLUSIONS

7.1 Discussion of Findings

Ramboll's findings, opinions, and conclusions regarding conditions at the site are presented below. The findings of this assessment are classified based on the definitions in the ASTM Standard provided in Section 8 of this report.

This assessment has revealed the following REC in connection with the site:

- **On-Site Groundwater and Soil Contamination Related to Historical Operations at Site.** Sears formerly operated an Automotive Center (1178 El Camino Real) on the northeast portion of the site (currently operated by Hyundai Automotive) that included seven USTs for the storage of gasoline (two 12,000-gallon and two 6,000-gallon), motor oil (two 530-gallon), and used oil (500-gallon). Following removal of the USTs between 1985 and 1987, investigations commenced to evaluate and delineate the extent of petroleum hydrocarbons in soil and groundwater beneath the site. Under the oversight of the SMCDEH, investigations continued into the 2000s and have included soil, groundwater, and soil vapor sampling, and the installation and periodic sampling of groundwater monitoring wells. In a letter dated March 15, 2013, SCMDEH stated that active remediation was not warranted for the former gasoline and oil USTs and the agency has not requested additional investigation of this area of the site since approximately that time.

  In 2001, a 100-gallon UST (unknown contents) was discovered in an excavation at a depth of 16 feet bgs during construction of the San Bruno Police Station adjoining the southeast side of the site (owned by BART) in 2001. This area is referred to as Anomaly E in correspondence and reports and appears to be a source area for subsurface petroleum and benzene impacts (see Figures 3 and 4). SMCDEH named BART as an additional responsible party in 2013, and BART has performed investigation and remediation of the area since that time. Based on a September 22, 2021 letter, the SMCDEH requested an additional post-remedial groundwater monitoring event (inclusive of all wells on the site and in the vicinity of Anomaly E), and indicated that if results demonstrated a sustained reduction in groundwater contaminants, further remedial effort may not be necessary, and the site may qualify for closure under the SWRCB Low-Threat Underground Storage Tank Case Closure Policy (LTCP). In response, a final groundwater sampling event was completed in December 2021 with groundwater results documented in a 2022 Report. Results of the event indicated that concentrations of benzene and ethylbenzene were detected above ESLs for commercial/industrial land use and total petroleum hydrocarbons as gasoline (TPHg) exceeded the MCL for drinking water. In an April 2023 letter, the SMCDEH indicated that the site met LTCP conditions and concluded all appropriate response actions appear complete and further investigation, remedial/removal actions, or monitoring of the release does not appear warranted. However, the case closure summary stated the following: "An unknown amount of hydrocarbon-affected soil and groundwater remain in the subsurface at the site. The City of San Bruno Building Department has been notified that should excavation or development of the property be proposed that may encountered impacted soil or groundwater, SMCDEH must be notified." In a July 2023 letter, the SMCDEH stated the RWQCB had approved SMCDEH's recommended case closure and that case closure will be granted when all of the wells are destroyed and all associated remediation equipment, if any, are removed. A well destruction workplan was requested. As of the date of this report, a workplan or other documentation evidencing well destruction had not been provided to the SMCDEH. The current status for the site is listed as "Eligible for Case Closure" pending closure of groundwater monitoring wells.

The open case status and presence of groundwater contaminants above commercial/industrial ESLs represents a REC (this issue would be a CREC when case closure is issued). It is not expected that site redevelopment will be inhibited in a significant manner by residual subsurface impacts. Irrespective of case status with the oversight agency, residual impacts present at this site are likely to be managed as part of redevelopment and construction, continued coordination with the agency, and the implementation of a soil management plan.

Ramboll identified the following findings that are not considered RECs or Controlled RECs (CRECs).

- **Former USTs without Closure Documentation.** Four USTs were formerly located at the site in association with a former JC Penney/Firestone automotive building on the southeast portion of the site. Three 10,000-gallon gasoline USTs and one 500-gallon UST were installed in 1972. A 1990 permit was issued to remove an exterior 550-gallon waste oil UST located along the east side of the Firestone auto services building. It is not clear if this is the same waste oil UST or an additional tank. No records were provided to evidence removal of the 550-gallon UST or other tanks. Facility personnel indicate there are no active USTs on-site but were unaware of the closure process prior or during the demolition of the automotive operations building in 2005. It is unclear whether the tanks were removed from the ground. Regulatory database search results do not identify any continuing obligations related to the closure of the USTs. Because Ramboll's review did not identify documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product related to this matter, it is not considered a REC; however, additional information (e.g., confirmatory sample data) would be required to evaluate the potential for subsurface impacts, if any, related to the operation of USTs at the site.
- **Past Operations at the Site**. The site has been used for various purposes since the late 1890s, including as a horse and automotive racetrack (1899-1964), military training and operations (1914-1918, 1941-1950), internment camp operations (1942), automotive shop operations (1970-2020) on the northeast and southeast portions of the site including the operation of inground hydraulic lifts and oil/water separator(s), and retail operations (1972 to present). Several of these former operations may have included the use of petroleum products, solvents, adhesives, paint, metals, acids, caustics, corrosives, explosives, propellants, lead, and other chemicals. Additionally, historical operations conducted between site development and the early 1980s predate the enactment of robust environmental regulations related to the handling, storage, and disposal of hazardous chemicals. With the exception of the open LUST case associated with the former Sears Automotive Center, facility personnel are not aware of any major spills or releases at the site. Because Ramboll's review did not identify documentation of a release, a suspected release, or a potentially material threat of a release of a hazardous substance or petroleum product at the site other than the release associated with the former Sears Automotive services, this matter it is not considered a REC.
- **Limited Pavement and Floor Staining.** Ramboll observed areas of interior pavement where petroleum releases or stains were apparent that include the following: (1) in areas underlying/adjacent to the air compressors in the mechanical air handling equipment rooms of the JC Penney and Hyundai buildings and basement of the Hyundai automotive services building that were limited to the immediate area; (2) an active small release of diesel from piping associated with the emergency fire pump for which site representatives stated their vendor has been contacted to repair the piping; (3) minor staining confined to the immediate area at the equipment reservoir in a few elevator rooms; and (4) minor staining and small pools of freshly spilled oil in some areas of the Hyundai automotive services building for which Hyundai representatives stated

are cleaned up on a daily basis and the used clay absorbent is placed in a drum. These stains and releases are limited in areal extent, the underlying pavement/flooring appeared to be intact, releases are cleaned up and/or in the process of being cleaned up, and are contained to the buildings. As such, Ramboll considers this matter to represent a *de minimis* condition.

7.1.1 Additional Considerations

Ramboll's scope of work was expanded to include the additional considerations identified in Section 1.3. The findings of the review of these additional considerations are summarized as follows:

- **ACMs.** The majority of the buildings were constructed prior and during 1972, except for the parking garage/Cinemark Theater building, which is prior to the time that asbestos was generally phased out of use in many building material applications during the mid-1980s. A limited screening survey was conducted at the site in 2021 that identified a total of 13 predominant suspect ACMs throughout the mall structures of which seven were sampled. None of the sampled materials were found to contain asbestos. Eight additional suspect ACMs were identified that were not sampled. The report concluded the following materials were assumed to contain asbestos: drywall and joint compound, roofing systems, and carpet/flooring adhesives generally throughout the structures; ceramic floor tile systems in the central shops and JC Penney; floor tile system in Target; and ceiling tile systems in Target and JC Penney. A 2022 Asbestos O&M Program was prepared to assist ARE with safely managing ACMs.
- **Lead-Based Paint**. Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are lead-containing paint. Based on the construction date of the buildings in 1969 and 1972, it is likely that LBP was used on facility structures. Facility personnel were not aware of the presence of any LBP on structures at the facility, and Ramboll observed the paint to be in good condition.
- **Water Intrusion/Mold**. Ramboll did not perform a mold survey at the site. Facility personnel reported that there had not been any past water intrusion events with the exception of roof leaks at the Sears department store that were immediately repaired, same day. No other information was available.
- **Radon**. Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, out of 45 sites surveyed in San Mateo County, three sites were over 4 pCi/L. A USEPA survey conducted in the same zip code as the site found that the average radon level of a first-floor room at two sites was 0.100 pCi/L.

7.2 Analysis of Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Site representatives did not have current contact information for representatives of former site owners/occupants. Ramboll made reasonable attempts to obtain such information, but it was not otherwise readily available. Thus, Ramboll was unable to interview former owners/occupants about historical operations and site conditions. Due to extended age of the site, it was not possible to interview representatives dating back to the site's first developed use in the late 1800s. However, Ramboll conducted interviews with representatives of ARE with tenure at the site dating back to 2011 and reviewed other historical sources regarding former uses of the site.
- Historical information, such as aerial photographs, was not readily available to characterize the property from the present back to the property's obvious first developed use or 1940, whichever is earlier. The earliest readily available historical source that would indicate specific site uses is a Sanborn Map dated 1899 which shows the site was already developed as a portion of the Tanforan Racetrack.
- Ramboll requested information from the San Bruno City Fire Department and the SMCDEH; however, as of the date of this report, a response to Ramboll's requests had not yet been received.
- Due to the size of the site, Ramboll relied upon site representatives to provide access to areas of the site where petroleum products, hazardous materials, and waste is stored and only a portion of the roof areas were accessed as deemed to safely accessible. In addition, the majority of the commercial areas were observed from public spaces and the exterior areas were assessed from a vehicle. Much of the exterior was also covered by densely parked vehicles. These conditions inherently limited the visual survey.
- Because this assessment is being prepared on behalf of the owner of this site, the information required in the User Questionnaire consistent with Appendix X3 of the ASTM Standard was obtained through the site reconnaissance and interviews. As such, no User Questionnaire was not required to be completed.
- EDR provided an environmental lien and AUL search conducted for the current deed(s) comprising the site; however, the search did not include review of searches for liens and AULs dating to 1980, as required by the 2021 ASTM Standard.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above is considered to represent significant data gaps.

8. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

REC - Recognized Environmental Condition:

(1) The presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

CREC - Controlled Recognized Environmental Condition:

A REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

HREC - Historical Recognized Environmental Condition:

A previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).

De Minimis Condition:

A condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Data Gap / Significant Data Gap:

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap that affects the ability of the environmental professional to identify a REC is considered a significant data gap.

APPENDIX B
ENVIRONMENTAL DATABASE REPORT

NOTES ON ENVIRONMENTAL DATABASE REPORT

The third-party provider conducted its searches for the standard environmental record sources and the minimum search distances, as specified by the ASTM Standard. The ASTM Standard uses the terminology “approximate minimum search distance” to refer to the radii searched in the environmental database report.

Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to one year or more (depending on the database and the state), the database search conducted herein will not necessarily list any facility or site for which an environmental investigation/listing has been initiated subsequent to the last update.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 09/25/2024 has revealed that there are 4 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/16/2024 has revealed that there are 2

CORRACTS sites within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/16/2024 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/16/2024 has revealed that there are 25 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to,

identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/22/2024 has revealed that there are 23 ENVIROSTOR sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 2 SWF/LF sites within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 21 CPS-SLIC sites within approximately 0.5 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are

EXECUTIVE SUMMARY

15 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/16/2024 has revealed that there are 116 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

GOLDEN GATE NATIONAL		WSW 1/2 - 1 (0.793 mi.)	680	3207

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 08/13/2024 has revealed that there are 3 FINDS sites within approximately 0.001 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 07/01/2024 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 2 UST FINDER sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 55 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 09/16/2024 has revealed that there are 65 E MANIFEST sites within approximately 0.25 miles of the target property.

Cortese: The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

A review of the Cortese list, as provided by EDR, and dated 09/16/2024 has revealed that there are 54 Cortese sites within approximately 0.5 miles of the target property.

CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there is 1 CUPA Listings site within approximately 0.25 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2023 has revealed that there are 7 HAZNET sites within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 8 EDR Hist Auto sites within approximately 0.25 miles of the target property.

A1 **PETCO #1320** **CERS HAZ WASTE** **S121744876**
Target **1150 EL CAMINO REAL STE 167** **N/A**
Property **SAN BRUNO, CA 94066**

Site 1 of 111 in cluster A

Actual:
47 ft.

CERS HAZ WASTE:

Name:	PETCO #1320
Address:	1150 EL CAMINO REAL STE 167
City,State,Zip:	SAN BRUNO, CA 94066
Site ID:	142672
CERS ID:	10464607
CERS Description:	Hazardous Waste Generator

Violations:

Site ID:	142672
Site Name:	Petco #1320
Violation Date:	03-28-2018
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 03/28/2018. OBSERVATION: 3 partially full containers of hazardous waste lacked the accumulation start dates. During the inspection, the store manager added the accumulation start dates to each container. CORRECTIVE ACTION: Continue to ensure that all containers of hazardous waste are properly labeled.
Violation Division:	San Mateo County Environmental Health
Violation Program:	HW
Violation Source:	CERS,

Site ID:	142672
Site Name:	Petco #1320
Violation Date:	06-14-2021
Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	Returned to compliance on 06/15/2021. There are two manifests from 2021. The initial copy of these two manifests were in the waste binder, but the final manifest copy was missing from the binder for both 2021 manifests. Obtain a copy of the "Designated facility to Generator" manifest copy for each of the 2021 manifests and provide documentation to SMCUPA within 30 days. Ensure final copies for all manifests are filed in the compliance binder.

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	03-28-2018
Violations Found:	Yes

PETCO #1320 (Continued) **S121744876**

Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine hazardous waste inspection. The facility has had the following hazardous wastes picked up: On 3-5-18, 11 pounds of waste toxic, liquids, organic (Chromium, Selenium). On 9-14-17, the following were picked up: 6 pounds of waste corrosive liquid, acidic, inorganic (phosphoric acid, hydrochloric acid). 1 pound of waste corrosive liquid, basic, inorganic (sodium hydroxide, potassium hydroxide). 2 pounds of waste aerosols, flammable (methyl ethyl ketone). 2 pounds of waste oxidizing liquid (hydrogen peroxide). 6 pounds of non RCRA hazardous waste liquid (surfactant, oil).

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Violation Program: HMRRP

TAN FORAN DENTAL GROUP (Continued) **S113056459**

Violation Source:	CERS,
Site ID:	159737
Site Name:	TARGET T1054
Violation Date:	08-20-2017
Citation:	40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description:	Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes:	Returned to compliance on 08/20/2017. OBSERVATION: A box containing bottles of Palmolive soft hand soap was dropped on the receiving floor underneath the processing line and the contents of several bottles was left on the receiving floor. During the inspection, the spilled product was cleaned up and waste generated from the clean up was placed into the facility hazardous waste container. CORRECTIVE ACTION: Continue to clean up and product spills, properly manage any waste generated from the clean up, and minimize the release of any hazardous waste.

Eval Notes: Observed a box of lamps in a rollaway dumpster behind business. Spoke with Carlos Betancourt the assest protection manger onsite who confirmed that the dumpster was Target's, but suspected that the bulbs had been dumped there by the public. He was notified that the bulbs would need to be removed from the dumpster and properly disposed of. Carlos confirmed he would notify the person responsible at target to ensure this was done. A follow up email to the environmental contact for target will also be sent requesting verification this was done.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is

SEARS, #1478 (Continued) **1007199969**

used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

A45 **PIZZA STUDIO** **San Mateo Co. BI** **S123183912**
Target **1150 EL CAMINO REAL** **N/A**
Property **SAN BRUNO, CA 94066**

Site 45 of 111 in cluster A

Actual: **47 ft.**

San Mateo Co. BI:
Name: PIZZA STUDIO
Address: 1150 EL CAMINO REAL
City,State,Zip: SAN BRUNO, CA 94066
Region: SAN MATEO
Facility ID: FA0057867
Prog Element Code: STORMWATER ANNUAL INSPECTION FEE
Record Id: PR0080280
Description: STORMWATER ANNUAL FEE - INSP FREQ EVERY 2 YRS
Facility Status: Inactive, non-billable
Program Category: STORMWATER

A46 **BATH & BODY WORKS #1453** **FINDS** **1024637323**
Target **1140 EL CAMINO REAL STE 162** **ECHO** **N/A**
Property **SAN BRUNO, CA 94066**

Site 46 of 111 in cluster A

Actual: **47 ft.**

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Salts

Waste Code: P081
Waste Description: 1,2,3-Propanetriol, Trinitrate (R) (Or) Nitroglycerine (R)

Waste Code: U002
Waste Description: 2-Propanone (I) (Or) Acetone (I)

Waste Code: U034
Waste Description: Acetaldehyde, Trichloro- (Or) Chloral

Waste Code: U035
Waste Description: Benzenebutanoic Acid, 4-[Bis(2-Chloroethyl)Amino]- (Or) Chlorambucil

Waste Code: U044
Waste Description: Chloroform (Or) Methane, Trichloro-

Waste Code: U058
Waste Description: 2h-1,3,2-Oxazaphosphorin-2-Amine, N,N-Bis(2-Chloroethyl)Tetrahydro-, 2-Oxide (Or) Cyclophosphamide

Waste Code: U072
Waste Description: Benzene, 1,4-Dichloro- (Or) P-Dichlorobenzene

Waste Code: U122
Waste Description: Formaldehyde

Waste Code: U129
Waste Description: Cyclohexane, 1,2,3,4,5,6-Hexachloro-, (1alpha, 2alpha, 3beta, 4alpha, 5alpha, 6beta)- (Or) Lindane

Waste Code: U134
Waste Description: Hydrofluoric Acid (C,T) (Or) Hydrogen Fluoride (C,T)

Waste Code: U150
Waste Description: L-Phenylalanine, 4-[Bis(2-Chloroethyl)Amino]- (Or) Melphalan

Waste Code: U154
Waste Description: Methanol (I) (Or) Methyl Alcohol (I)

Waste Code: U188
Waste Description: Phenol

Waste Code: U200
Waste Description: Reserpine (Or) Yohimban-16-Carboxylic Acid, 11,17-Dimethoxy-18-[(3,4,5-Trimethoxybenzoyl)Oxy]-, Methyl Ester, (3beta, 16beta, 17alpha, 18beta, 20alpha)-

Waste Code: U201
Waste Description: 1,3-Benzenediol (Or) Resorcinol

Waste Code: U240
Waste Description: 2,4-D, Salts & Esters (Or) Acetic Acid, (2,4-Dichlorophenoxy)-, Salts & Esters (Or) Dichlorophenoxyacetic Acid 2,4-D

Waste Code: U279
Waste Description: U279

HYUNDAI OF SAN BRUNO (Continued) **S129058062**

6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: Returned to compliance on 01/30/2023. OBSERVATION: Training records for all applicable employees were not available at the time of the inspection. REQUIRED ACTION: Perform safety training for all employees, at a minimum including emergency response plans and procedures in the event of a release or threatened release of a hazardous material, notification procedures of appropriate parties and emergency response personnel, procedures for mitigation of a release or threatened release, and evacuation plans and procedures for the business site. Submit documentation to the Inspector demonstrating that all employees have received training. Ensure that initial and annual refresher training records for all employees are retained for a minimum of three years.
Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 617645
Site Name: Hyundai of San Bruno
Violation Date: 12-15-2022
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to label stationary hazardous waste tanks as "hazardous waste" and mark with an accumulation start date.
Violation Notes: Returned to compliance on 02/08/2023. OBSERVATION: The waste oil and waste antifreeze totes did not have the accumulation start dates fill out on their labels. REQUIRED ACTION: Ensure that all hazardous waste tanks are labeled with "Hazardous Waste" and the accumulation start date. Submit photos to your inspector showing this has been accomplished.
Violation Division: San Mateo County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 617645
Site Name: Hyundai of San Bruno
Violation Date: 12-15-2022
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 02/08/2023. OBSERVATION: The four white samson oil caddys did not have hazardous waste labels. The 5 drums in the hazardous waste accumulation area had labels that were not completely filled out. REQUIRED ACTION: Ensure that all containers holding hazardous waste are labeled with the following requirements: "Hazardous Waste", name and address of the generator, composition and physical state, hazardous properties, and the accumulation start date. Submit photos to your inspector showing this has been accomplished.

Name:	ULTA BEAUTY 175
Address:	1140 EL CAMINO REAL
Address 2:	Not reported
City,State,Zip:	SAN BRUNO, CA 94066
Contact:	NEDRA ALLEN
Telephone:	6304104814
Mailing Name:	Not reported
Mailing Address:	1000 REMINGTON BLVD, SUITE 120
Year:	2015
Gepaid:	CAL000388859
TSD EPA ID:	NVD980895338
CA Waste Code:	141 - Off-specification, aged or surplus inorganics

ULTA BEAUTY 175 (Continued) **S123630566**

Disposal Method:	H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons:	0.173
Year:	2015
Gepaid:	CAL000388859
TSD EPA ID:	NVD980895338
CA Waste Code:	181 - Other inorganic solid waste
Disposal Method:	H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons:	0.0015
Year:	2015
Gepaid:	CAL000388859
TSD EPA ID:	NVD980895338
CA Waste Code:	792 - Liquids with pH <= 2 with metals
Disposal Method:	H121 - Neutralization Only
Tons:	0.002
Year:	2015
Gepaid:	CAL000388859
TSD EPA ID:	NVD980895338
CA Waste Code:	131 - Aqueous solution (2 < pH < 12.5) containing reactive anions ...
Disposal Method:	H070 -
Tons:	0.007
Year:	2015
Gepaid:	CAL000388859
TSD EPA ID:	NVD980895338
CA Waste Code:	331 - Off-specification, aged or surplus organics
Disposal Method:	H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons:	0.666
Year:	2015
Gepaid:	CAL000388859
TSD EPA ID:	NVD980895338
CA Waste Code:	214 - Unspecified solvent mixture
Disposal Method:	H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons:	0.0285
Year:	2014
Gepaid:	CAL000388859
TSD EPA ID:	NVD980895338
CA Waste Code:	352 - Other organic solids
Disposal Method:	H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons:	0.6425
Year:	2014
Gepaid:	CAL000388859
TSD EPA ID:	NVD980895338
CA Waste Code:	214 - Unspecified solvent mixture
Disposal Method:	H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons:	0.1545

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

CERS ID: 10939108
CERS Description: Chemical Storage Facilities

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-20-2023
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Onsite for initial routine inspection. Facility has four 50lb CO2 cylinders onsite, Manager stated they were in the process of completing employee training, and had the hmbp binder onsite with most staff signatures for completion of training. No CO2/Oxygen alarms were observed onsite for atmosphere monitoring. These are not required per this permit, but are good best practice safety equipment to have installed. -- No facility representative signature was obtained during the inspection due to lack of internet access.

LUST REG 2:
Region: 2
Facility Id: Not reported
Facility Status: Pollution Characterization
Case Number: 880008
How Discovered: OM
Leak Cause: Unknown
Leak Source: Unknown
Date Leak Confirmed: Not reported
Oversight Program: LUST

SEARS, #1478 (Continued) **S101308696**

Prelim. Site Assesment Wokplan Submitted: Not reported
Preliminary Site Assesment Began: Not reported
Pollution Characterization Began: 1/1/1965
Pollution Remediation Plan Submitted: Not reported
Date Remediation Action Underway: Not reported
Date Post Remedial Action Monitoring Began: Not reported

Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 09/05/2019. OBSERVATION: Destination signed copy of Uniform Hazardous Waste Manifest 000809514WAS from 3-8-18 was not not available at the time of inspection. During the inspection, a destination signed copy of the manifest was obtained from the DTSC database and emailed to the facility operator. CORRECTIVE ACTION: Continue to maintain a copy of all destination signed copies of manifests.

Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Onsite for routine inspection. Walked facility with General Manager Veronica Williams. Veronica discussed how all trash is sorted in the 2nd floor, and any discovered hazardous waste is diverted down to the 1st floor hazardous waste storage area. -- Hazardous waste is generated primarily from the cosmetics, and salon, as well as from any damages, returns or waste diverted from normal trash. During the inspection, a label was added to the non-rcra waste container that had been partially filled since the last inspection, as well as to an aerosol waste container. -- No facility representative signature was obtained during the inspection due to lack of internet access.

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.
