Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

- Feature Description: Prior To Dod Use, The Site Was The Tanforan Race Track, Primarily Used For Horse Races. Around 1911, It Was Briefly Used As An Airfield. During World War I, The Site Was Used As A Military Training Center. In 1942, Former Camp Tanforan Was Acquired For Use As A Temporary Assembly Center For Persons Of Japanese Ancestry Shortly Following The Bombing Of Pearl Harbor In December 1941. The U.S. Army Took Possession Of The Property On 3 April 1942, And Initial Construction

CAMP TANFORAN (Continued) **1024903722**

Was Completed On 25 April 1942. The Camp Was Constructed To House 7,900 People. The First Group Of Japanese Internees Arrived On 28 April 1942, And The Site Reached A Maximum Capacity Of 7,893 Internees. Internees Were Housed In Newly Constructed Barracks As Well As The Existing Horse Stables At The Site. Mess Halls, Recreation Buildings, Latrines, Showers, And Infirmaries Were Constructed To Accommodate The Internees. By 13 October 1942, The Last Of The Internees Were Sent To A More Permanent Relocation Center Further Inland. The Site Closed As An Assembly Center On 26 October 1942. Between November 1942 And March 1944, Various Branches Of The Dod Temporarily Used The Site For Housing Troops. The Site Officially Transferred From The Department Of The Army To The Department Of The Navy On 1 March 1944. Under The U.S. Navy, The Site Was Known As The Naval Advance Personnel Depot San Bruno. Additional Buildings Constructed By The U.S. Navy Included A Boiler House, Paint Locker, Rifle Range Building, And Incinerator. The Lease To The Property Was Scheduled To Terminate On 30 June 1946. An Aerial Photograph Dated 29 July 1946 Shows That All Dod-Constructed Buildings Except One Former Barracks And One Mess Hall Were Removed. The Lease Termination Documents For The Property Were Not Found During Research. Following Dod Use, The Site Reopened As A Race Track Until The Early 1960s, And It Was Destroyed By A Fire In 1964. In 1971, A Commercial Mall Known As The Tanforan Park Shopping Center Was Constructed At The Location. Additional Commercial Developments

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	The Site was developed in 1958 by the American Linen Supply Company which operated a commercial laundry and dry cleaning business there. The dry-cleaning business used tetrachloroethene (PCE) until 1992. Since 1958, wastewater from the laundry operations was discharged to a large solids settling tank located outside the northeastern side of the building, prior to the wastewater being released into the sanitary sewer. Two underground storage tanks (USTs), used for gasoline and diesel were removed in 1987 but petroleum fuels are not the primary chemicals of concern (COCs). The primary chemicals of concern (COC) are volatile organic compounds due to past dry-cleaning operations. Part of the contamination appears to be related to a release at 416 Browning Way (see 41S0175), which is currently undergoing groundwater treatment via injections. Contamination under the site building is being addressed by in-situ injections and interim remediation (soil excavation and disposal) occurred previously. A supplemental investigation and risk assessment is being conducted at the Site.

Site History:	Order No. R2-2015-0012 Site Cleanup Requirements for 531-535 OAK, LLC, and Goss-Jewett Company of Northern California for the Property at 416 Browning Way, South San Francisco. Goss-Jewett owned the Site from 1957 to 2011 and operated a dry cleaning supply distribution business from 1957 to 2000 at the Site. The company provided laundry chemicals, including detergents and spotting chemicals, packaging products such as hangers and polyethylene bags, and bulk deliveries of tetrachloroethene (PCE). The PCE was stored in a 4,100 gallon aboveground storage tank (AST) that was in the southwestern corner of the building. In 2000, the Site was leased to Pain Therapeutics, which converted the warehouse into office space. The Site is currently operated as B.I.A. Cordon Bleu, a wholesale manufacturer and distributor of porcelain and stoneware, bakeware, and dinnerware. There were no reported spills or releases from the Site during Goss-Jewett s operations. There has been no known use of chlorinated solvents at the Site since Goss-Jewett ceased operations in 2000. The initial investigation of the Site was conducted by Geomatrix on behalf of Goss-Jewett in response to a directive from the Regional Water Board dated May 14, 2007. The Regional Water Board was overseeing the investigation of the release of volatile organic compounds (VOCs) in the vicinity of the neighboring property located at 290 South Maple Avenue, which is adjacent and east of the Site. Since the Site was previously a dry cleaning supply distribution business, and it is located up-gradient and cross-gradient of 290 South Maple Avenue, the Regional Water Board directed Goss-Jewett to investigate the Site for the presence of VOCs. The results of the 2007 investigation confirmed the presence of highly- elevated concentrations of VOCs, including PCE and its breakdown products, at the Site. The results of additional investigations have confirmed the presence of highly-elevated concentrations of VOCs in soil, soil vapor, and groundwater samples collected in the southwestern portion (former AST area) and the northeastern portion of the Site. Based on

416 BROWNING (FMR GOSS-JEWETT FACILITY) (Continued) **S102445327**

the results of these investigations, in 2015 and 2016 more than 2,000 tons of contaminated soil were removed from areas that had been identified as having high PCE concentrations in soil, and the open exposed excavations treated with a dechlorination agent prior to being backfilled. Additional soil removal and groundwater treatment were conducted in 2018. Indoor Air sampling indicated concentrations of PCE slightly above commercial environmental screening levels. In 2023, in-situ chemical oxidation was performed near monitoring wells MW-1, MW-4, and MW-5 and additional investigation to delineate the groundwater and soil vapor plumes in the downgradient direction is proposed. Vapor intrusion mitigation measures were implemented at the site in 2024.

Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters,

storers, and disposers of hazardous waste.
